Agriculture Canada

1985–86 Estimates

Part III

Expenditure Plan

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Agriculture Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are six chapters in this document. The first provides an introduction to the Department. The other five present the Program Expenditure Plans for each of the Department's programs.

Chapters 2 to 6 begin with extracts from Part II of the Estimates and Volume II of the Public Accounts for the particular program being described. This is to provide continuity with the other Estimates documents.

Each of the Program Expenditure Plans is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Canadian Grain Commission Program	6-1

Departmental Summary

Roles and Responsibilities

Agriculture Canada's mandate is to provide assistance to the food, agricultural and forestry sectors of the economy in maximizing their contribution to the growth, development and stability of the Canadian economy.

To fulfill its role in the food and agriculture sectors, the Department works with three principal client groups: producers; processors, distributors, wholesalers and retailers; and consumers. Services encourage or facilitate an economic environment conducive to exploitation of opportunities by the private sector in a manner that assures a dependable supply of safe, nutritious food at reasonable prices to consumers, and equitable returns to producers and processors.

To fulfill its role in the forestry sector the Department works directly with provinces and the forest industry to promote and improve the economic utilization of Canada's forest resources through environmentally sound forest management.

As part of the Economic and Regional Development Envelope, the Department and its associated agencies provide services to the agri-food and forestry sectors through the following programs:

Departmental Administration Program: this program provides general direction to the Department and a full range of management support systems and services.

Agri-Food Development Program: this program includes services designed specifically to stimulate the development of the agri-food sector. Major components of this program include marketing development, financial assistance such as stabilization and crop insurance, regional development support, soil and water conservation, and the undertaking of agricultural and food research which has successfully supported the sector for nearly a century.

The Agricultural Stabilization Board: the Board administers the Agricultural Stabilization Act which provides for the support of agricultural product prices by granting deficiency payments or by making direct payments to producers at a fixed rate. The Board provides funds for the support of the dairy industry through the Canadian Dairy Commission.

The Agricultural Products Board: the Board is empowered by the Agricultural Products Board Act to buy, sell or import agricultural products and to administer food contracts and other operations. These actions help to provide producers with stable incomes and also ensure the availability of a ready supply of food products.

The National Farm Products Marketing Council: the council advises the Minister on all matters pertaining to the establishment of marketing agencies. It supervises the operation of national marketing agencies established under the Farm Products Marketing Agencies Act.

Agri-Food Regulation and Inspection Program: this program provides for regulatory and inspection services designed for the protection of the agri-food sector. Services are provided in the areas of disease control and eradication, quality assurance of food and farm inputs, meat safety and race track supervision.

Canadian Forestry Service Program: this program includes services designed specifically to stimulate the development of the forestry sector. Major components of this program include forest renewal; intensive forest management through regional development agreements; and the discovery, development, demonstration, implementation and transfer of research innovation to the forestry sector.

Canadian Grain Commission Program: this program provides quality assurance services to maintain quality standards of Canadian grains and oilseeds.

Organization

Agriculture Canada is headed by the Minister responsible to Parliament for the activities of the Department. The Minister of State for the Canadian Wheat Board and the Minister of State (Forestry) are responsible to the Minister as are associated agencies.

Figure 1 presents the relationship of the Agriculture Canada organization to the program structure.

The head offices for the Department, the Agricultural Stabilization Board, the Agricultural Products Board and the National Farm Products Marketing Council are located in Ottawa. The Canadian Grain Commission maintains a head office in Winnipeg and the head office of the Prairie Farm Rehabilitation Administration is located in Regina.

Figure 1: Relationship of Organization to the Program Structure

Department Spending Plan

The Department estimates total expenditures in 1985-86 of $1,680,212,051. This represents an decrease of $102,832,949 or approximately 5.8% over the forecast expenditures for 1984-85. A summary of the Department spending plan by program is presented in Figure 2.

	1,680,212	1,783,045	(102,833)	(5.8)

Priorities

The directions sought through the 1981 Agri-food Strategy continue to be the foundation for planning and priorities within the Department, and for pursuing the long-term viability of agriculture. The Agri-Food Strategy responds to the need for a comprehensive federal agricultural strategy that emphasizes market development, encourages cost-competitive production, preservation of the natural resource base, protection against short-term price instability and production hazards, and provision of the flexibility to adjust to longer-term changes in farm structure, production technology and interdependence among sectors.

The Forestry Sector Strategy addresses the need for a federal response to the problems of a dwindling Canadian timber supply, balancing market demand for Canadian timber with present and future supply and improving the adequacy of forest research and development.

To achieve these objectives, specific priorities to be addressed include:

- increasing emphasis on domestic development in the food processing, distribution and retailing industry;
- increasing research and development oriented towards improving production efficiency and productivity;

- improving the transfer of market and technology information to the agri-food and forestry industries;
- further development and implementation of commodity marketing strategies related to identified agri-food markets;
- ensuring stability in farm income and credit costs;
- encouraging activities and programs to sustain and enhance the agri-food and forestry resource bases;
- emphasizing programs to develop alternatives to agricultural and forestry chemical use; and
- maintaining a world-class grading and inspection system.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

In 1985-86, the Administration Program will:

- improve management practices in the areas of planning, contracting and operational control systems and develop and implement a comprehensive departmental management improvement plan (see page 2-20).
- implement department-wide affirmative action initiatives, derived from a recent study, in order to improve the participation of under-represented groups in departmental operations (see page 2-21).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Information Services	4,554	4,726	(172)	2-15
Strategic Planning and Evaluation	2,529	2,052	477	2-17
Management and Administration	53,384	49,102	4,282	2-19
	60,467	55,880	4,587	
Authorized person-years	1,054	968	86	

Explanation of Change: The financial requirements for 1985-86 are 8% or $4.6 million higher than the the 1984-85 forecast expenditures. The increase is primarily due to:

- increase in salaries due to inflation — $2.2 million
- the transfer of resources from Environment Canada in support of the Canadian Forestry Service Program — $1.2 million
- transfer of operations from other areas of the department — $1.0 million

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $4.4 million or 8.6% higher than the 1984-85 Main Estimates of $51.5 million (Extracts from Part II of the Estimates, page 2-4). The difference of $4.4 million reflects the following major offsetting items:

	$ million
• additional funding for the operation of the Financial Management Information System	1.2
• the transfer of resources from Environment Canada in support of the Canadian Forestry Service Program	1.8
• to restore and maintain appropriate levels of capital equipment	0.5
• other miscellaneous items	0.9
	4.4

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: Gross Expenditures by Object (Percentage Distribution) 1985-86

B. Recent Performance

1. Highlights

Highlights of the Program's performance for 1983-84 are:

- Several initiatives were implemented to improve and strengthen procedures. For example, a new operational planning framework was established and an Operational Planning Division has also been put together to deliver a full range of services such as developing departmental policies and procedures, communicating these, training departmental staff, monitoring the quality of operational plans and reports, and producing briefings.

- A strategy for major construction was developed. The strategy will see $228 million expended over the period of 1984-85 through 1987-88 for the improvement of the Department's research and laboratory operations. At the same time a comprehensive Life Cycle Capital Management Program including Equipment was developed. These two strategies will improve the control over departmental assets.

- The staff appraisal-process was reviewed and initiatives were implemented to improve and strengthen procedures.

- The Libraries Division has developed and implemented a fully integrated automated library system which will make its large data base accessible to every part of the Department. The Data Base has been loaded, indexed and made accessible on-line to all Agriculture Canada establishments with library staff across Canada.

2. Review of Financial Performance

Figure 4: Review of Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Information Services	4,385	4,191	194

	50,393	48,226	2,167
Person-Years	957	923	34

C. Background

1. Introduction

The Departmental Administration Program provides overall management direction, policy, advice and a full range of management systems and services to support the programs of Agriculture Canada. These services cover all the essential functions required for efficient management of the Department in delivery of programs.

The Program encompasses the Minister's Office, the Deputy Minister's Office and services including general administration, assets management, computer services, personnel, finance, internal audit, strategic planning, program evaluation, information services, libraries and management consulting.

2. Legal Mandate

The mandate for the Administration Program is based on legislative authority granted the Minister under the Department of Agriculture Act and the Financial Administration Act.

3. Program Objective

To provide overall direction and administrative support services for the Department.

4. Program Organization for Delivery

Activity Structure: The Administration Program, as shown in Figure 5, comprises three activities: Management and Administration, which is designed to provide overall management direction and services with

respect to finance, administration, library, computer, audit, and personnel functions; Strategic Planning and Evaluation, which supports the senior executive of the Department in corporate planning and setting priorities and which is also responsible for conducting independent and impartial evaluations of departmental programs for the Deputy Minister and Senior Management; and Information Services, which provides a broad public affairs program to inform the agriculture and food industry, as well as the public, about the policies, programs and undertakings of the Department.

Figure 5: Activity Structure

Organization Structure: The activities which are outlined in Figure 4 are carried out through an organization structure consisting of four branches: Finance and Administration; Communications; Personnel Administration; and Audit and Evaluation. In addition, the Minister's Office, the Deputy Minister's Office and the Strategic Planning Division are included in the Program.

Figure 6 sets out the organization structure and relates resources for each activity by branch. Services are decentralized, and regional and/or district offices for Personnel and Finance and Administration are located in Ottawa, Moncton, Montreal, Toronto, Saskatoon and Vancouver. The Personnel Administration Branch also has regional offices in Winnipeg and Calgary. As well, there are 30 libraries located throughout the country in addition to the headquarters library in Ottawa.

D. Planning Perspective and Performance Review

1. Environment

The Department's Agri-Food Strategy will feature predominantly in the economic development strategy of Canada. Its implementation will take place in very different and difficult times in the social and economic development of the country. The success realized in implementing the strategy will, among other things, depend on how effectively important human resources and scarce financial resources are managed.

Managing a Department as large and as complex as Agriculture Canada requires effective planning and control systems. New approaches and strategies must be developed to respond to new demands from the agri-food and forestry sectors, improve effectiveness of departmental programs, and ensure optimum utilization of available resources. This can best be achieved by means of a strong centralized Administration Program with unique corporate-level expertise in the areas of strategic and operational planning, policy development and analysis, audit and evaluation, and resource management. A separate Administration Program also promotes greater "unity of purpose" and coordination of the Department's operational programs and facilitates communications with central agencies.

The restraint environment that we have been living in will intensify. The Department will have to be alert and creative in determining how to resource our many programs and initiatives. The department must obtain the level of resources necessary to carry out its mandate and to implement new initiatives. It is essential that the Department not only defend its existing approved resource base against further erosion, but also build the best possible cases for incremental funding.

In this environment, the Department must also pursue every opportunity to improve productivity including a more efficient utilization of resources. To accomplish that, managers must have relevant and timely information with respect to the utilization of those resources.

2. Initiatives

In 1985-86 the Administration Program will improve resource management by developing the skills, mechanisms and strategies to reallocate resources from existing operations to new initiatives or priorities of the Department.

3. Update on Previously Reported Initiatives

- The pilot project for implementation of a Financial Management Information Sytem was successfully implemented on time, and within the estimated cost of $1.4 million.

- Satisfactory progress against comprehensive audit plans was made in 1983-84 in the implementation of an expanded internal audit capability. This initiative was aided by the allocation of three additional person-years in that year at a cost of approximately $150,000. The scope of audit work was extended to cover various departmental operations and functions not previously audited.

4. Program Effectiveness

The Administration Program provides management and support services to the departmental operating programs and, as a result, contributes directly to the efficiency and effectiveness with which they are administered.

From a performance standpoint, the Program can be measured in terms of the expenditures of the operating programs it serves. Figures 7 and 8 show the resources of this Program in relation to the operating programs.

Figure 7: Relationship of Administration Operating Expenditures to Departmental Operating Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Departmental total	808,365	758,917	598,965
Administration Program	58,385	52,994	46,942
Percentage	7.2	7.0	7.8

Figure 8: Relationship of Administration Person-Years to Departmental Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Administration Program	1,054	1,014	957
Percentage	7.9	7.7	7.4

Section II
Analysis by Activity

A. Information Services

Objective

To obtain greater understanding of, and support for, the Department's activities among a variety of publics.

Resource Summary

The Information Services Activity accounts for approximately 8% of the total 1985-86 Administration Program expenditures and 7% of the total person-years.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Programs	1,855	27	1,926	26	1,290	23
Operations	2,699	50	2,800	50	3,095	53
	4,554	77	4,726	76	4,385	76

Personnel costs account for 65% of this Activity's total resources. The balance is required to fund information-related operating costs such as departmental publications, films, radio programs, photos and exhibits.

Past Financial Performance

Figure 10 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 10: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Programs	1,290	1,193	97
Operations	3,095	2,998	97
	4,385	4,191	194

Explanation of Change: The increase is due to expenditures incurred under the toxic chemical Program approved in Supplementary Estimates.

Description

The Information Services Activity provides information and public relations services to support departmental activities and informs Canadians on the Department's policies, programs and services. It uses all modes of mass communication, in both official languages, with the goal of providing the most effective service at the lowest possible cost.

Performance Information/Resource Justification

Professional advice and counsel is provided to senior management and departmental managers in order to ensure the effective integration of the communications component into policy development. Managers throughout the Department are in a better position to deal effectively with the media and the public and to ensure public awareness of departmental programs and policies.

Ongoing public relations is crucial to nurturing and maintaining effective and constructive two-way communication between the Department and its publics (producers, the agri-food industry, the media and general public) and to informing these publics about departmental policies and programs on a continuing basis.

The nature of the Department dictates that publishing is one of the key functions, providing timely, up-to-date scientific, technical and general information on departmental services, policies, programs and activities to both specific audiences and the general public. A central publishing service, including editing, graphic design, processing, printing, mailing and shipping is maintained.

B. Strategic Planning and Evaluation

Objective

To provide strategic planning and program evaluation services to Senior Management and the Department.

Resource Summary

The Strategic Planning and Evaluation Activity accounts for approximately 4% of total program expenditures and 4% of person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Strategic Planning	1,618	26	1,180	20	810	13
Program Evaluation	911	13	872	12	861	12
	2,529	39	2,052	32	1,671	25

Personnel costs account for 75% of this Activity's total resources. The balance is required mainly to acquire professional services through contracting.

Past Financial Performance

Figure 12 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 12: 1983-84 Financial Performance($000)

	1983-84		
	Actual	Main Estimates	Change
Strategic Planning	810	818	(8)
Program Evaluation	861	863	(2)
	1,671	1,681	(10)

Explantion of Change: No significant change.

Description

The principal responsibility of the Strategic Planning and Evaluation Activity is to ensure an effective organization and planning system for meeting the objectives and goals of the Department. This includes effective departmental implementation of plans and subsequent evaluation of their effectiveness, as well as the cyclical review of the Department's programs.

Performance Information/Resource Justification

Strategic Planning: This division correlates departmental policy proposals and initiatives through the development of strategic and corporate plans. Senior and middle management participate on an ongoing basis to ensure the strategic framework for developing operational plans is adequate and acceptable. The division takes a long-range approach to reviewing medium and long-range initiatives and proposals, studies their impact on agri-food strategies and programs, develops a coordinated time frame and makes recommendations to senior management.

Program Evaluation: This component conducts independent and impartial evaluations of the effectiveness of departmental programs for the Deputy Minister. It reviews evaluation frameworks developed by branches in relation to standards set by central agencies and also advises senior management on policy matters related to program evaluation developments in government. After evaluations are carried out and subsequent direction has been given by senior management, it monitors the implementation of these directives.

The division has a well defined Program Evaluation Plan that provides comprehensive coverage to all program components over a six-year cycle. During 1984-85, major studies were undertaken on the evaluation of the Department's food grading and inspection programs, and on the review of its crop production development research activities. The former focussed on such issues as the net benefits of grading, level of service, and cost-effective alternatives while the latter addressed such key issues as technology transfer, production efficiency and cost-effectiveness, and priority-setting. In addition, evaluation of two sunset programs - the Canadian Agricultural Markets Development Fund and the Fruit and Vegetable Storage Construction Financial Assistance programs were completed.

In 1985-86, the Department will enter the third year of the six-year cycle, with some significant evaluations to be initiated; for example, Animal Production Development Research and the Prairie Farm Rehabilitation Administration from the Agri-Food Development Program and Inspection and Protection of Crops and Farm Input Supplies and Research and Advisory Services from the Agri-Food Regulation and Inspection Program.

C. Management and Administration

Objective

To assist the operating programs of the Department, including associated Commissions and Boards, in the accomplishment of their objectives and goals and to ensure departmental compliance with legislative and/or central agency requirements.

Resource Summary

The Management and Administration Activity accounts for 88% of the 1985-86 expenditure budget, and 89% of the person-year budget allocated to the Administration Program.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive and General Management	3,693	66	3,493	66	3,175	55
Finance and Administration	38,656	610	35,618	600	32,544	581
Personnel Administration	11,035	262	9,991	240	8,618	220
	53,384	938	49,102	906	44,337	856

Personnel costs account for approximately 67% of this Activity's total resources. The balance is required to fund other operating costs of the Activity. Some of the major expenditure items which are in support of the whole Department are for postage, electronic data processing services and library subscriptions.

Past Financial Performance

Figure 14 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 14: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Executive and General Management	3,175	4,497	**(1,322)**
Finance and Administration	32,544	28,952	**3,592**
Personnel Administration	8,618	8,905	**(287)**
	44,337	42,354	**1,983**

Explanation of Change: The major reason for the increase between the 1983-84 Main Estimate and 1983-84 Actual expenditures is due to items approved in Supplementary Estimates: namely, the reorganization and regionalization of finance and the transfer of resources in support of Prairie Farm Rehabilitation Administration.

Description

This Activity provides executive and general management of the Department and the central support services. It includes the Offices of the Minister and Deputy Minister, as well as the departmental central support services of finance, administration, computer services, internal audit, personnel, management consulting services and libraries.

Performance Information/Resource Justification

Executive and General Management: covers the operation of the executive offices and includes the immediate staff associated with these offices.

Finance and Administration: ensures that the Department and its associated agencies are equipped with management, financial, administrative, library and computer systems that meet the requirements of the Department, Parliament and central agencies. This work is carried out at headquarters as well as in six regional offices, and in the case of library services, in 30 field libraries, as well as the headquarters library in Ottawa.

In 1985-86, one of the Department's challenges is to improve management processes and practices. A new Management Practices Division has been created to foster management accountability and to develop and implement a "Management Improvement Plan" that will foster the Department's continued commitment to improved management practices. A new

Operational Planning Division has been created to ensure several improvements in the areas of planning and control. The Department will also initiate improvements in the contracting practices area including the formalization of a Contract Review Board, development of a desk manual for contracting and an automated contract administration system.

The Department will make maximum use of new technology to deliver to managers a system to improve the administration and management of information in the areas of data, records, Directives and Libraries, while fostering the continued development of an Integrated Departmental Information System. Several improvements will be made in the overall management and administration of information resources in the Department, including a new records classification system, an integrated Manuals/Directives management program and a fully integrated automated library system.

A major restructuring of the master audit plan will be completed in 1984-85. This will respond to the Deputy Minister's request for a more comprehensive functional and program oriented audit approach linked to the new activity structure. The departmental program evaluation plan has also been restructured to reflect the new activity structure

In 1985-86 the revised audit plan and approach will be implemented with a series of projects comprising audits of programs, major departmental systems or functions and organizational units. This will ensure more effective and comprehensive information for senior management on the management and control process within the department.

Personnel Administration: assists all departmental managers in obtaining and maximizing the utilization of their human resources through guidance, advice and service relating to personnel matters. This work is carried out at headquarters and in eight regional/district offices across the country.

In 1984-85, Personnel Administration has commenced full-scale delivery of an in-house middle management and supervisory orientation training program. At least 260 employees will be trained annually, resulting in improved managerial competence among middle managers and supervisors.

In 1985-86, the department will implement the approved recommendations of the Affirmative Action Study which was conducted in 1984-85. This implementation is intended to improve the participation of underrepresented groups in departmental operations. This Affirmative Action Strategy will be integrated into the work-plans of the department and will result in increased representation of target groups and in attainment of the departmental objective. Progress toward this goal will be measured through comparison of actual numbers employed against planned numbers.

The Branch will also undertake the automation of the pay and benefits function to improve the timeliness and accuracy of all transactions.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The Departmental Administration Program expenditures by object are presented in Figure 15.

Figure 15: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	35,490	32,431	28,955
Contributions to employee benefit plans	4,963	4,009	4,036
Other personnel	228	354	258
	40,681	36,794	33,249
Goods and services			
Transportation and communications	5,130	5,117	4,540
Information	1,283	1,605	1,032

The person-year columns display the forecast distribution by occupational group of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and reclassifications divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 18 presents an analysis of the Administration capital expenditures for 1985-86.

Figure 18: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Minor construction	1,062	899	747
Equipment acquisition	1,020	1,987	2,606
	2,082	2,886	3,353

B. Cost Analysis

The Program's Estimates for 1984-85 include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items must be included when considering the actual costs to operate the Program.

Figure 19: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	1984-85 Forecast
Information Services	4,554	440	4,994	-	4,994	5,163
Strategic Planning and Evaluation	2,529	223	2,752	-	2,752	2,236
Management and Administration	53,384	5,421	58,805	-	58,805	54,318
	60,467	6,084	66,551	-	66,551	61,717

The adjustments made to the estimated expenditures to arrive at a total net cost include: accommodation provided without charge by Public Works and other services provided without charge by other departments; and all revenues generated by the Program.

Other Costs

Other costs are services provided without charge by other Departments as follows: Public Works ($5,316K), Supply and Services ($41K), Treasury Board ($719K) and Labour ($8K).

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

With respect to the various program components, the major features for fiscal year 1985-86 are:

Farm Income Protection

- $383 million in statutory payments and other agricultural contributions will be made to producers under the Agricultural Stabilization Act; a decrease of 12% over the 1984-85 forecast. These payments are directed to the stabilization of farm product prices (see page 3-67).

- Approximately $160 million in statutory payments and contributions will be made to the Provinces under the Crop Insurance Act to improve stability when the agri-food sector is adversely affected by crop losses due to natural hazards; a decrease of 14% over the 1984-85 forecast (see page 3-65).

- $130.5 million will be provided to the Western Grain Stabilization Administration Account to improve stability for grain producers in the Canadian Wheat Board designated area; an increase of 16% over the 1984-85 forecast (see page 3-67).

- Farmers will be protected by purchase and resale programs under the Agricultural Products Board Act. An account of $5.6 million will be provided in 1985-86 for this program (see page 3-67).

- As a result of the Government's reorganization, the Western Grain Stabilization Act ($130.5 million) formerly managed by the External Affairs Department will be administered by Agriculture Canada (see page 3-67).

Research and Development

- Soil conservation and productivity will be improved through increased research in critical areas; a total of $11.5 million and 205 person-years have been budgeted for research on land (see page 3-27).

- New crop varieties will be developed in order to meet current and anticipated market demands; for research on crop production development, the planned cost is $74.2 million and 1,167 person-years (see page 3-31).

- Nutrition and feed efficiency in animal production will be improved; $45.4 million and 544 person-years have been budgeted for research on animal production development (see page 3-31).

- Efficiency in the food processing, distribution and retailing sector will be increased through completion of the Food Research Centre at St-Hyacinthe, Que. at a total cost of $35.7 million, with $14.2 budgeted for 1985-86 (see page 3-44).

- Effective procedures for preventing contamination of feed and food will be developed and implemented. A total of $2.7 million and 32 person-years are budgeted for research on food safety and nutrition (see page 3-42).

Regional Development

- Federal and Federal/Provincial agri-food development programs will be administered in southeast New Brunswick, the lower St. Lawrence and Gaspé regions ($5.1 million 1985-86), in Nova Scotia ($6.2 million for 1985-86); in Prince Edward Island, New Brunswick, Manitoba, Saskatchewan and Quebec as part of the Economic Regional Development Agreements (ERDAs) ($24.9 million for 1985-86) (see page 3-54).

Soil and Water Conservation and Development

- Opportunities for soil conservation initiatives and irrigation development projects over the next five years will be provided by the Canada-Saskatchewan and Canada-Manitoba Agricultural Development Subsidiary Agreements as part of the Economic and Regional Development Agreements. (see page 3-72).

- Rehabilitate the Bassano Dam as the final stage of the 1973 Canada-Alberta Irrigation Rehabilitation Agreement. A cost of $9.0 million has been budgeted in 1985-86 (see page 3-72).

- Administer the Canada-Saskatchewan Subsidiary Agreement on Agricultural Community Water Infrastructure. $32.0 million with 50% to be recovered from Saskatchewan has been authorized for the program over the next five years of which $8.0 million has been budgeted in 1985-86 (see page 3-72).

- Establish an Irrigation Demonstration Farm in Manitoba to promote irrigation by demonstrating improved irrigation methods and irrigated crop production. The total financial requirement is $3.0 million with $531,000 million planned for 1985-86 (see page 3-72).

Market Development and Economic Analysis

- To provide a more timely information system to those involved in marketing decisions, $600,000 will be used in 1985-86 to convert the Market Information System , a system that gathers market data and economic information, from manual to electronic processes. This is part of a three year project to begin in 1985 (see page 3-50).

- A total of $800,000 and two person years have been allocated as part of a four year Agricultural Support for Export Expansion project. Special emphasis in 1985-86 will further develop integrated food and agriculture expansion projects with External Affairs by providing increased technical, scientific and commodity expertise (see page 3-48).

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Budgetary				
Research on Natural Resources	22,098	23,735	(1,637)	3-27
Research on Production Development	177,934	150,217	27,717	3-31
Research and Information Related to Processing, Distributing, Retailing and Consumer Concerns	27,071	29,946	(2,875)	3-42
Market Development and Economic Analysis	44,380	46,555	(2,175)	3-46
Farm and Regional Policy Development and Economic Analysis	48,356	49,677	(1,321)	3-52
International Development Assistance	2,347	2,341	6	3-59
Income Stabilization, Loans and Advisory Services	699,597	784,657	(85,060)	3-62
Prairie Farm Rehabilitation	72,229	120,661	(48,432)	3-69
Management & Administration	58,830	65,456	(6,626)	3-74
	1,152,842	1,273,245	(120,403)	
Non-budgetary				
Prairie Farm Rehabilitation	-	16	(16)	
	1,152,842	1,273,261	(120,419)	
Authorized person-years	5,625	5,507	118	

The decrease of $120.4 million in requested resources for 1985-86 results primarily from the following major changes:

- net increases in operation: $ 20.9 million;
- increase in capital: $32.1 million; and
- net decrease in transfer payments: $173.7 million.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $1,273.3 million or $152.3 million higher than the 1984-85 Main Estimates of $1,121.0 million (Extracts from Part II of the Estimates, page 3-4). The difference of $152.3 million reflects the following major items:

	$ millions
• increase for crop insurance	37.0
• increase for drought assistance program	59.3
• increase for payment for designated commodities under the Agriculture Stabilization Act	63.0
• increase for compensation to Apple Growers for frost damage	13.0
• increase for General Agreements and Economic Regional Development Agreements	5.8
• increase in Agricultural Products Board's expenditures	12.0
• increase for excess moisture program	9.0
• increase in capital for equipment replacement plan and Saint-Hyacinthe (SRCPP) project	28.8
• decrease for named commodities under Agricultural Stabilization Board	(29.0)
• decrease for Western Grain Stabilization	(38.0)
• decrease in major capital construction	(24.0)
• decrease in advance payments for crops	(4.0)

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: Gross Expenditure by Object (Percentage Distribution) 1985-86

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are:

Regional Development

- $10.8 million of a total of $13.0 million in order to address regional desparities was spent on delivering five federal/provincial cost/shared Subsidiary Agreements located in the Provinces of Newfoundland, New Brunswick, Québec, Manitoba and British Columbia. Not all funds in an amount of $2.2 million were expended due to delays in the progress of projects. Funding was carried forward to future years.

- Federal agri-food development programs for producers, processors and nongovernmental organizations were delivered at a cost of $8.3 million of a total plan of $10.5 million in Prince Edward Island, Nova Scotia and Southeast New Brunswick. The unspent $2.2 million was due to delays in getting signed agreements, in receiving project submission and payment requests; these funds have been carried forward to future years.

- Agri-food strategies for each province were developed. These strategies served as the basis for preparing and negociating the Economic Regional Development Agreements (ERDAs).

Farm Income Protection

- Deficiency payments made to 42,441 producers in 1983-84 amounted to $83 million compared to $6 million paid to producers in 1982-83.

- In support of producer returns for industrial milk and cream, an amount of $309 million was paid to the Canadian Dairy Commission.

- In 1983-84, 115,000 farmers purchased $3.1 billion in crop insurance protection. Total indemnity payments amounted to $286 million, compared to a total premium income of $294 million. The federal contribution amount to $134 million.

- In 1983-84, the Federal government paid $122 million in the Western Grain Administration Account.

- Programs for raspberries, strawberries, apple juice, canned peaches, canned pears and grapes were established under the Agricultural Products' Board Act.

Research and Development

- Results from long-term wheat rotations provided evidence that summerfallowing on the prairies should be reduced to once in three years. An economic analysis showed that a properly fertilized wheat-wheat-fallow rotation was 23% more profitable than the predominantly used wheat-fallow rotation.

- The Research Branch developed a total of 35 varieties in 1983 which were either licensed or released to industry. This total included 24 new varieties of cereal, forage and field crops and 11 new horticultural varieties.

- Significant progress was achieved in putting more efficient soil survey techniques into field operations, including greater reliability of maps, improved evaluation of water movement in soil, clearer assessment of land degradation, and more flexible data base management.

- Plans for the new Food Research Centre at St-Hyacinthe, Que., were completed. This project received priority under the Special Recovery Capital Projects Program and construction is progressing on target according to the revised schedule.

- $31.4 million was spent to upgrade research and development capital facilities and equipment to combat obsolescence and meet program requirements.

Market Development and Economic Analysis

- Technical Trade Missions promoted dairy and beef cattle, cattle embryos and semen, pulses and canola, seed potatoes and livestock feeds in the Republic of Korea, Japan, Mexico, Colombia, Jamaica, Cuba and the Philippines. This contributed to sales of dairy cattle and rye to Korea, registered dairy cattle to Colombia; dairy cattle, semen and breeding programs to Mexico and the signing of a semen import trade agreement with Japan.

2. Review of Financial Performance

C. Background

1. Introduction

The Agri-Food Development Program discharges the federal government's responsibility to help the food and agricultural sector to maximize its contribution to the growth and development of the Canadian economy and the resolution of world food problems. To fulfill this role, the Program is responsible for several clientele groups, including producers, processors, distributors, wholesalers, retailers and consumers, while under pressure from interest groups, lobbyists and changing government priorities. Jurisdiction over the agri-food sector is shared with provincial authorities and other federal departments such as Environment, National Health and Welfare, and External Affairs. In addition, there is close cooperation with universities and national and international organizations involved in agriculture.

The major components of the Program are: agricultural research and advisory services, regional development, income stabilization, market development, and Prairie Farm Rehabilitation soil and water conservation and development. The Agricultural Stabilization Board, the Agricultural Products Board and the National Farm Products Marketing Council also fall within the Program.

2. Legal Mandate

The Department of Agriculture Act provides the legislative authority for the Minister to control and direct agriculture. Other principal acts governing the activities of the Agri-Food Development Program are the Agricultural Stabilization Act, Crop Insurance Act, Experimental Farm Stations Act, Western Grain Stabilization Act, Advance Payments for Crops Act, Agricultural Products Cooperative Marketing Act, Agricultural Products Marketing Act, and the Prairie Farm Rehabilitation Act.

3. Program Objective

The objective of the Agri-Food Development Program is "to stimulate the development of the agri-food industry, to provide for a dependable and adequate supply of food at reasonable prices to consumers and to ensure stable and equitable returns to producers and processors".

The Program achieves this objective by encouraging the development of a healthy and sustainable environment for agri-food production and by improving the efficiency and quality of crop and animal production by undertaking research in these areas. Income stablization programs promote equitable and stable returns to producers by protecting incomes from market price instability and production uncertainties. The long-term viability of agriculture on the Prairies is enhanced through the delivery of soil conservation programs and the development of a

drought-resistant agricultural sector. The Program also fosters regional development and ensures that Canada meets its international aid commitments. With respect to the processing, distributing and retailing sector, the Program promotes increased efficiency, technological innovation and new product acceptability. The Program also works toward its objective by promoting Canadian agricultural products through information and advisory services to consumers and institutional food service sections by increasing Canadian agri-food exports, and by fostering international trade. Finally, the Program strives to ensure the long-term security of supply for Canada.

4. Program Organization for Delivery

Activity Structure: The Agri-Food Development Program is divided into nine activities that reflect Program endeavours and its efforts in meeting its stated objective. Each activity is subdivided to further refine the objective and operation of the Program. Figure 5 illustrates the activities of the Program.

Figure 5: Activity Structure

Organization Structure: The activities of the Agri-Food Development Program are administered through five branches, two boards and one council, namely the Senior Assistant Deputy Minister's Branch, the

Research Branch, the Marketing and Economics Branch, the Regional Development Branch, the Prairie Farm Rehabilitation Administration, the Agricultural Products Board, the Agricultural Stabilization Board, and the National Farm Products Marketing Council.

The Senior Assistant Deputy Minister and the Assistant Deputy Minister (Marketing and Economics Branch) serve as chairperson and vice-chairperson, respectively, of the Agricultural Products Board and the Agricultural Stabilization Board. The National Farm Products Marketing Council is headed by a chairperson who reports directly to the Minister of Agriculture.

The Program is delivered through central headquarters in Ottawa, regional offices and research stations and facilities across Canada.

The relationship between the departmental organization and the activity structure described above, together with a breakdown of 1985-86 resources, is shown in Figure 6.

D. Planning Perspective and Performance Review

1. Environment

The agri-food sector has the potential to increase its production by two-thirds by the turn of the century. However, due to worldwide economic problems, the international trading environment for agricultural products will likely be difficult through this decade. International market development effort must be expanded to sustain and enhance the health of the sector. Other key issues that significantly affect the nature and direction of the Agri-Food Development Program are:

Market Risk: The element of market risk creates a reluctance on the part of producers to increase production, because supply/demand fluctuations can change commodity prices dramatically from year to year.

Market Development: The development of export markets is constrained by tariffs and non-tariff barriers in markets where Canada would otherwise have a competitive advantage. Subsidized exports from other countries further reduce market opportunities, both domestically and internationally.

Human Resource Management: About 25% of research scientists in the Department will be eligible to retire within the next few years, leaving a void in the capability of the Research Branch. It is imperative that efforts be made in conjunction with universities in order to plan for the necessary recruits. In addition, qualified economists and commerce positions to administer and implement the Federal and Federal/Provincial Agri-Food Development Agreements have been difficult to staff in certain provinces due to the sunset clause affecting these agreements.

Natural Risks: Approximately 15% to 20% of potential annual crop production is lost through insects, diseases and weeds.

Environmental Damage: Much of Canadian farmland is deteriorating; soil salinity affects about 5% of cultivated land in the Prairies; loss of organic matter is a serious problem; soil compaction occurs due to the use of heavy machinery; urban development is encroaching on prime agricultural farm land; and concern is increasing on the effects of toxic chemicals on health and the environment. These factors are all exerting pressure on governments to account for and justify the use of agrochemicals in food production.

Water Management: Improved water management is a high priority if agricultural production in Canada is to be increased. At present, irrigation water is provided to only about 2% of the crop area where it is needed, and drainage is installed in about 20% of soils where it is required.

Energy Usage: Energy costs have increased substantially, and further increases are expected despite the current short-term glut. Of total Canadian energy usage, some 15% is utilized by the food system, comprising farm production, food processing, distribution and household preparation. The rising cost of energy is increasing farm production costs as well as food prices, and has prompted a need to assess energy use, to develop appropriate conservation practices, as well as to reduce reliance on petroleum-based fertilizers and pesticides.

Processing: Canadian processing firms have difficulty competing with foreign processors because of higher costs and the need for more efficient technology. Opportunities for increased added value are not being fully realized and Canada is importing a large number of secondary processed food products.

Soil Conservation: A variety of problems are contributing to the severe degradation of the Prairie soil resource. Salinity affects 2.2 million hectares, and this is increasing at a rate of 10% a year. In addition to natural intermittent erosion, accelerated erosion has followed the onset of agricultural settlement, with areas so affected far exceeding those subject to salinity. The frequent use of fallowing and intensive, often excessive, tillage practices have been the main reasons for the alarming rate of loss of organic matter. Soil acidification, poor soil moisture conservation practices and the preceding factors, have all contributed to reduced crop yields.

Water Resource Development: In order to maintain and enhance the agricultural sector of the Prairie economy, it is imperative that dependable water supplies be developed for agricultural purposes such as irrigation, rural domestic, and stock-watering, as well as for agricultural trading centres. Given long-term predictions of severe, warmer temperatures, a drought-proof environment is urgently needed.

Transportation: Expanding the capacity of the national transportation facilities is imperative to carry increased production to markets.

Long-Term Capital: High and fluctuating interest rates are significant cost and risk factors, and constitute barriers to the investment needed to increase productivity.

2. Initiatives

The following are the major Agri-Food Development Program initiatives for 1985-86:

- In line with the Economic and Fiscal Statement made by the Minister of Finance, the Agri-Food Development Program will generate an additional $7.3 million in new revenues in 1985-86.

Research and Development

- The new Food Research Centre under construction at St-Hyacinthe, Que., will assist in providing new and improved technology to Canadian processing firms so that they can compete more effectively with foreign processors. It is expected to be completed in 1985-86, with the facilities in operation in 1986-87. A total of $35.7 million is budgeted for construction of this centre, with $14.2 required for 1985-86; $21.5 million is planned to be spend by March 31, 1985 (see page 3-44).

- To provide producers and land use planners with new and improved information and technology related to soil conservation, emphasis will be given to basic research on soil physical relationships and soil constituents as well as to methods for reducing erosion and salinity and for improving the efficiency of irrigation with a budget of $11.5 million (see page 3-27)

- Biotechnology offers enormous potential for the agri-food industry and is seen as a major component of industrial development in the years to come. In response to the Government's National Biotechnology Strategy, the Department will place emphasis on emerging technologies such as genetic engineering, tissue culture and integrated pest control strategies in carrying out its production support research activities with a total budget of $37.7 million (see page 3-31).

- Increased attention will be given to society's growing concern about the impact of agricultural production systems on the environment. Research will focus on areas such as improved technology for animal waste management, the fate of pesticides in the environment and the development of improved farm practices that reduce pesticide use and pollution in general. A total of $2.1 million is budgeted for this research initiative (see page 3-34).

Regional Development

- In 1984-85 the Department will enter into new Federal Provincial Agreements known as Economic Regional Development Agreements (ERDAs). A direct federal delivery program known as the Assistance Plan for Innovation and Technology Transfer in the Quebec Agri-Food Industry has also been approved. Total funding of $108 million is planned for these programs of which $24.9 million has been allocated in 1985-86 (see page 3-54).

Soil and Water Conservation and Development

- Programs will be undertaken to alleviate the severe land degradation problems on the Prairies under the Canada-Manitoba and Canada-Saskatchewan Subsidiary Agreement on Agri-Food Development (see page 3-72).

- Irrigation development programs will provide for expanded or new irrigation projects in several areas of Saskatchewan under the Canada-Saskatchewan Subsidiary Agreement on Agricultural Development (see page 3-72).

- Under the Canada-Saskatchewan Subsidiary Agreement on Agricultural Community Water Infrastructure, 42 designated agricultural trading centres will receive aid to develop water supply, water treatment and waste facilities. Of the total authorized funding of $32 million for the next five years, $16 million will be recovered from the Province. In 1985-86, it is planned to spend $8.0 million (see page 3-72).

- An irrigation demonstration farm will be established in Manitoba to promote irrigation, demonstrate improved irrigation methods and crop production at a total cost of $3.0 million of which $531,000 has been allocated for 1985-86 (see page 3-72).

3. Update on Previously Reported Initiatives

As a result of initiatives undertaken in 1983-84, the following results have been obtained.

Market Development

- A computerization of Agriculture Canada's market information system will be implemented over the next three years.

- The first Commodity Council for Growth, a mechanism to ensure closer industry/government cooperation was developed in cooperation with the apple industry.

- Although funding was not approved in 1983 to establish market responsibility centres, the first step was taken through internal reallocation of resources to place marketing offices in regions.

Research and Development

- As a result of additional resources ($1.9 million) being approved in Supplementary Estimates, planning and construction for the Food Research Centre at St-Hyacinthe, Que., is progressing ahead of the schedule originally drawn up and contracts for the foundation and framing have been awarded.

- Technology development in crops research has had significant impacts, particularly in the case of the new varieties of wheat, canola and potatoes that have been introduced to producers.

- Research to develop beef growing-finishing systems adaptable to Atlantic conditions has been progressing well. Highly acceptable rates of gain (0.9 kg/day) and carcass grades (mainly A1) were obtained by feeding beef steers high-quality forage and a supplement with no other grain.

  Advances continue to be made in crop management systems, particularly for intermediate wheatgrass, herbicides and plastic mulch for increased crop yield.

- Efforts in the area of energy conservation resulted in improved efficiency in greenhouse operations, enhancing prospects for the transfer of technology to the industry. Good results were also obtained for reduced energy use in crop drying and in heat recovery in animal facilities.

4. Program Effectiveness

The objective of the Agri-Food Development Program is "to stimulate the development of the agri-food industry, to provide for a dependable and adequate supply of food at reasonable prices to consumers and to ensure stable and equitable returns to producers and processors". Over the past several years, the Program has effectively achieved its objective, as shown by the continuous increase in farm outputs and a lower food price increase than for other consumer products. At the same time, the Program has implemented effective mechanisms and incentives to ensure stable incomes to producers, fair returns to processors and protection against severe economic shocks. The agri-food sector has a stabilizing effect on the Canadian economy in that it provides employment to some 1.4 million people (which represents over 13% of the total Canadian labour force), constitutes 10% of the Gross Domestic Product (GDP), and is a major contributor to the balance of payments and international trade.

The Agri-Food Development Program is carried out in close cooperation with a variety of jurisdictions within the federal government, with other levels of government, universities and the agri-food industry. Thus, it must be recognized that the measures of achievement

cannot be solely attributed to the performance of the Program but are the sum of a variety of contributions. Nonetheless, the Program is a major contributor to the success of the agri-food sector.

During 1985-86 Agriculture Canada will be working in close cooperation with the provinces to implement the Economic and Regional Development Agreements (ERDAs) and Sectoral Agreements to support regional development through agri-food initiatives. The disbursements of over $108 million in federal funds to four Provinces, namely Manitoba, Saskatchewan, Prince Edward Island and New Brunswick, will have a major input on the future development of the agri-food sector.

The Program is scrutinized through the departmental program evaluation process, which looks at the present relevance and continuing need for the Program and its component parts, the extent to which its objectives and sub-objectives are being met, its impacts and effects, and whether there are cost-effective alternatives. At present, the evaluation of three components that comprise the Income Stabilization, Loans and Advisory Services Activity are being completed.

Specifically, this represents those departmental activities relating to Production Risk Protection (Crop Insurance and Compensation); Market Risk Protection (Agricultural Stabilization Act, Agricultural Products Board Act and Western Grain Stabilization Act); and Family Farm Assistance (Farm Improvement Loans Act, Feed Freight Assistance Adjustment Fund and Contributions to Canfarm Cooperative Services). These evaluations have provided management with better information on which to make policy and programming decisions regarding this Activity.

Another recently completed evaluation reviewed the Crop Production Development Research component from the Research on Production Development Activity. Evaluations underway or scheduled for initiation in 1985-86 include the Animal Production Development Research, Production Support Research and Farm Input Supply Research components from the Research on Production Development Activity.

Stimulating the Development of the Agri-Food Sector: Two key measures of the effectiveness of the Program in stimulating the development of the agri-food sector are the agriculture trade balance and the agri-food value of output.

Agriculture Trade Balance: The agricultural sector of the economy is a large and stable earner of foreign exchange. In 1982, the agriculture trade balance was $4.3 billion, up 2% over the previous year. Canadian agricultural exports in 1983 were $9.5 billion, a 2% increase over 1982, while imports at $5.2 billion increased 21% from the previous year. Agriculture has contributed significantly to Canada's positive trade balance in goods. Over the last 10 years (1974-83), Canada's annual trade balance has averaged $3.7 billion, of which $2 billion or 80% was contributed by agriculture.

Significant potential exists to improve Canada's agricultural trade balance from the current level of $4.3 billion. Targets of $5 billion for 1985 and $10 billion for 1990 are proposed. To accomplish this, significant increases in exports will be required, namely exports of $11 billion by 1985 and $14 billion by 1990.

Figure 7 displays Canada's agricultural trade performance, including projected targets, from 1971 to 1983.

Figure 7: Canada's Agricultural Trade Balance By Year

Source: Canada's Trade in Agricultural Products Agriculture Canada Publication

Value of Output: The agri-food sector increased its real output by 25% (constant 1971 dollars) between 1972 and 1983. Compared to the manufacturing sector, the agriculture industry has demonstrated greater stability during the recent economic recession Canada. Although real gross domestic product (GDP) for agriculture (1971 constant dollars) declined by 1.41 in 1983, it had increased by 2.41 the previous year. GDP for the manufacturing sector increased 6% during 1983, but had decreased 12.1% the previous year. However, although total agricultural output has been relatively constant during recent years, agricultural output per person increased 20.7% between 1979 and 1983, compared to 1.5% for the manufacturing sector during the same period.

Figure 8 displays the value of output performance from 1971 to 1983 for the primary agricultural sector and the food and beverage sector.

Figure 8: Agri-Food Value(1) of Output(2)

Source: Food and Agricultural Regional Model (FARM) Agriculture Canada Publication

(1) Values in constant prices 1971 = 100
(2) Gross Domestic Product

Dependable and Adequate Supply of Food at Reasonable Prices to Consumers: One measure of the extent that food is provided at reasonable prices to consumers is consumer food expenditures as a share of disposable income. The share of disposable income spent on food at home in 1982 fell to 11.9%, and the share spent on meals eaten away from home also decreased, to 3.8% during 1983. This is essentially due to the higher personal income and the fact that food price increases were lower compared to other consumer products. Various components of the Program contribute toward the achievement of this objective.

Food expenditures as a percentage of disposable income from 1971 to 1983 are displayed in Figure 9, which indicates a general downward trend during the period.

Figure 9: Food Expenditures as a Percentage of Disposable Income*

*Expenditures for food at home and away from home.

Section II
Analysis by Activity

A. Research on Natural Resources

Objective

To assist in developing and conserving the natural resources necessary for agricultural production and to increase the efficiency of their utilization.

Resource Summary

The Research on Natural Resources Activity accounts for 2% of the Agri-Food Development Program budget for 1985-86 and 5% of the person-years.

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Land	11,451	205	10,734	216	9,632	198
Water	2,942	49	2,675	48	2,312	49
Energy	5,599	30	9,407	30	6,764	26
Environmental Quality	2,106	36	919	39	2,104	41
	22,098	320	23,735	333	20,812	314
Revenue	486		-		-	

Resources are applied on a consistent basis from year to year. Approximately 62% of the resources are used for salaries, and 14% for contract research.

Past Financial Performance

Figure 11 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 11: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Land	9,632	8,425	1,207
Water	2,312	2,182	130
Energy	6,764	6,873	(109)
Environment	2,104	1,914	190
	20,812	19,394	1,418

Explanation of Change: Additional resources (12 person-years and $1.2 million) were utilized in Land Research through reallocation from other areas of the Program in order to respond to increasing emphasis on soil salinity and soil conservation.

Description

This Activity provides provincial extension agencies, planning agencies, regulatory agencies, and primary and secondary producers with information and technology that contribute to the effective and wise use of land, water and energy in support of increasing the efficiency of agri-food production without harming the environment.

In these areas, research is undertaken to provide information and new technology, as follows:

Land: Research and mapping are carried out on agricultural land to provide for its conservation, availability and better use. The Department provides accurate and detailed information on soil resources for land use planning decisions.

Water: Research is undertaken to provide information and new technology for the effective and efficient use of water resources for agricultural production.

Energy: Research is aimed at three areas in energy throughout the food production system: energy conservation, production, and utilization.

Environmental Quality: Research is carried out to develop agricultural management practices consistent with production and environmental requirements.

Performance Information/Resource Justification

The Department undertakes a large number of research projects on natural resources each year on an ongoing basis, involving some 135 scientists at 12 research establishments across the country. In addition, approximately $3.0 million is spent on contract research, accounting for about 13.7% of the effort on natural resources. An important aspect of this total activity is technology transfer, both directly to producers and to intermediate agencies such as the Prairie Farm Rehabilitation Administration. Information on research projects and significant accomplishments are provided in the Department's publication "Progress in Research". Figure 12 is a summary by subactivity of the specific initiatives for 1985-86. Additional details are as follows:

Land: In 1985-86, the Department will continue to provide information and technology related to soil management, conservation and desalinization, as well as land inventory and evaluation. Studies will focus on

soil physical relationships, soil erosion in Quebec, minimum tillage in western Canada, and basic research on soil constituents such as nitrogen. The results are expected to have an impact in a number of areas, for example, increased cereal and forage production on problem soils, reduced soil erosion, adaptation of minimum tillage to a wide range of soil and climatic conditions, improved soil conservation and possible alternatives to fertilizer application.

Soil surveys and land evaluation will address the rapidly growing demand for information from land use planners and for regional agricultural development programs. Better methodology will steadily improve the cost effectiveness of both land inventory and evaluation.

Water: In 1985-86, a variety of techniques for improving the efficiency of irrigation will be investigated, with emphasis on modeling of irrigation water distribution, and economical methods of lining irrigation canals. The goals are to avoid wasteful operations and to reduce soil degradation due to canal seepage on the prairies. In dryland production areas, alternate cropping systems will be developed to improve water conservation and reduce salinization.

Energy: A major program on energy research and development has been established. The overall aim is to develop technology for food, feed and fibre production systems that will increase energy efficiency, reduce the use of fossil fuels, and improve economic returns to producers and processors. Major results are expected to come from research on energy conservation in the food processing sector, alternative sources of energy for use on the farm, and methods to conserve energy in crop production (e.g., reduced tillage). A total of 185 contract proposals were received for review and initiation in 1984-85 and beyond. In addition, many suitable contractors are already engaged in energy contract work.

Environmental Quality: In order to reduce hazards to human and animal health, during 1985-86 research will focus on advancing the knowledge of safe agricultural practices for environmental protection. Safer methods for applying pesticides will be developed, the need for chemical control of pests will be reduced and farm practices for waste disposal and fertilizer applications will be improved.

Figure 12: Research on Natural Resources

Sub-activity	Resources $000	Resources P-Y	Overall Output	Specific Initiatives FY 1985-86
Land	11,451	205	Information on agricultural land to provide for its maintenance, availability and better use to meet current and future agricultural and food production needs.	Better knowledge of the crop sequences required to conserve soils in perpetuity. Methodology for adapting minimum tillage to a wide range of soil and climatic conditions. Enhanced understanding of the effects of erosion on agriculture in Quebec. Fundamental research on soil physical relationships, on soil constituents such as nitrogen, and on sophisticated techniques for improving the efficiency of fertilizers. Increased emphasis on soil surveys and land evaluation in response to the rapidly growing demand for information; development of more cost-effective methods in both inventory and evaluation.
Water	2,942	49	Methods for the effective and efficient use of water resources for agricultural production.	Development of techniques for improved irrigation efficiency, leading to reduced costs and water conservation; development of a model for irrigation water distribution; improved fertilizer practices for use with irrigation. Advances in economical methods of soil drainage, and in defining procedures for control of soil salinity; recommendations for alternative cropping systems on dryland areas to improve water conservation and reduce salinization. Improved understanding of the implications of long days on crop yield in northwestern Canada; methods to detect important differences in climate near the ground; improved knowledge of the interaction between crops and climate for better farm weather service and enhanced assessment of crop production.
Energy	5,599	30	Information and technology on the conservation, production and utilization of energy throughout the food production system.	Conservation: Technology for greenhouses, solar collectors and heat exchangers for livestock buildings, and improved crop dryers. Alternative sources: Energy crops, liquid fuel production, methane production from manure and food processing wastes. Utilization: Energy-efficient technology for food processing, tilling operations, and greenhouse operations.
Environmental Quality	2,106	36	Reduced environmental degradation due to agricultural practices, reduced environmental hazards associated with agricultural production and practices.	Development of improved technology for animal waste management, and for cropping and fertilizer practices to safeguard groundwater. Continued studies on the effects of pesticides on nontarget organisms, on the fate of pesticides in the environment, and on the relationship of pest control to weather conditions as part of the ongoing effort to ensure the safe use of agricultural chemicals for crop and animal production. Use of sex attractants to improve the monitoring of new insect populations.

B. Research on Production Development

Objective

To assist in increasing the efficiency and improving the quality of primary food and agricultural production in order to meet domestic and export market demands and international aid commitments through basic and mission-oriented research and technology transfer to users.

Resource Summary

The Research on Production Development Activity accounts for 15% of the Agri-Food Development Program expenditures and 48% of the person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Animal Production Development Research	45,489	544	27,277	538	26,767	544
Crop Production Development Research	74,240	1,167	65,797	1,252	68,971	1,179
Production Support Research	37,716	540	36,765	547	33,747	560
Farm Input Supply Research	978	20	1,066	23	983	20
Genetic Improvement	18,058	345	17,979	343	21,302	343
Crop Improvement	1,453	11	1,333	11	1,146	8
	177,934	2,627	150,217	2,714	152,916	2,654
Revenue	13,591		7,657		6,760	

The percentage of resources applied to salaries has decreased slightly to 57% during the past three years. During the same period, the proportion used for capital has increased to 30%. Other operating costs (including allocations for maintaining equipment, laboratories, and other capital assets) remain fairly consistent at about 9% of the total resources. Revenue is generated from the sale of products and through fees for service. The total revenue of approximately $13.6 million is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

There were a number of changes between actual and planned financial requirements, as indicated in Figure 14.

Figure 14: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Animal Production Development Research	26,767	33,622	**(6,855)**
Crop Production Development Research	68,970	60,410	**8,560**
Production Support Research	33,747	30,166	**3,581**
Farm Input Supply Research	983	910	**73**
Genetic Improvement	21,303	16,601	**4,702**
Crop Improvement	1,146	1,504	**(358)**
	152,916	143,213	**9,703**

Explanation of Change: Major factors responsible for deviations are:

- a one-time contribution of $9.1 million to the Western Grains Research Foundation, which was approved in Supplementary Estimates;
- changes in the Capital Strategy Plan, resulting in a decrease of $7 million for this planning element ($2 million lapsed, the remainder being reallocated);
- the full utilization of the Summer Canada Employment program and the New Employment Expansion Development program in this planning element (91 person-years and $4.5 million); and
- the Special Recovery Capital Project totaling $4.3 million for improvements to the Exhibition facilities at the Canadian Western Agribition.

Description

Research on Production Development strives to solve current and anticipated problems in the diverse soil and climatic zones of Canada. Operations are designed: to determine optimum soil and climate conditions for specific types of crop and animal production; to develop new and improved varieties of crops and new breeds of animals; and to reduce losses caused by disease, weeds, and insects. This activity is of direct benefit to the agricultural industry and producers because it provides new information for better management decisions, as well as new and improved techniques, varieties, and breeds for efficient production to meet domestic and export market demands.

The Research on Production Development Activity consists of six elements, as listed in the activity resource summary. The first four elements are carried out by the Research Branch and the last two by the Regional Development Branch.

Animal Production Development Research: Research is carried out on beef and dairy cattle, hogs, sheep, poultry and honey bees. In general, the Program supports research on breeding, on reproductive physiology, and on feeding, production and management systems.

Crop Production Development Research: Research is directed toward improving the efficiency of production and the quality of crops to meet current and anticipated market demands through development of new varieties with higher yields, greater resistance to pests, and increased tolerance for adverse environmental conditions.

Production Support Research: Basic research for the development of new technology in food and agricultural production is carried out in the areas of biosystematics, pest management, pesticides and plant physiology. Studies are conducted on drought resistance and winterhardiness in crops, nitrogen fixation, cytogenetics, plant disease organisms, insect pests, weed ecology and biotechnology. This research also contributes information and techniques for the development of crop and animal protection systems to minimize losses from pests. A national centre for collections and studies in insect and plant identification serves federal and provincial agencies, universities, specialists and the general public.

Farm Input Supply Research: Canadian farmers annually invest $500 million in construction and improvements to farm buildings and $2 billion in farm machinery. Farm input supply research is aimed at developing minimum-cost functional farm buildings and farm machinery that can reduce production costs and maintain or improve product quality. Methods of economical energy use in agriculture are also developed.

Genetic Improvement: The Department works in concert with livestock producers, provincial governments and other segments of the industry and the federal government to improve the genetic merit and management of livestock. The Department provides extensive genetic improvement programs under the Record of Performance Program for Dairy, Beef, Swine and Sheep. As well, it ensures authentic identification and ancestry of purebred livestock through the administration of the Livestock Pedigree Act.

Financial assistance is provided to approximately 210 fairs and exhibitions across Canada for the exhibition of livestock.

Crop Improvement: The Department facilitates the viability and improvement of crop production by: assessing national and regional crop production potentials; assessing the impact of drought, excess moisture, and frost on crop production; and evaluating environmental resource constraints and advantages for existing and potential crop

production. As well, it facilitates the commercial adoption of new crops, new varieties, new production techniques and the development of new production areas. Financial assistance is provided to approximately 25 projects annually for this purpose.

Performance Information/Resource Justification

Agriculture Canada's Research Branch conducts hundreds of specific research projects on an ongoing basis in animal and crop production, production support and input supply. Some 520 scientists are involved at 32 of the 35 major research establishments located in every province (see Section III, page 3-91). Although the majority of research is carried out "in-house", some 1.6% of the work (approximately $2.6 million) is contracted out to the private sector and to universities.

Details of projects and significant accomplishments in the various areas of research can be found in the Department's publication "Progress in Research". Figure 15 shows the allocation of resources by animals, crops and production support function. Major initiatives are outlined below and summarized in Figure 16.

Animal Production Development Research: The broad objective of this research is to increase production efficiency by improving the quality and increasing the production potential of animals. Research is carried out over a period of years and the results are viewed in this context.

During 1985-86, research will concentrate on efficient methods of feeding and managing beef cattle and other livestock. The objective is the development of production systems that will make use of new technology on forage and pasture management and locally produced feeds, leading to efficient cow-calf and feedlot operations. Other research, as highlighted in Figure 16, aims to provide the information and technology that will allow livestock operators to meet the growing consumer demand for leaner meat and high-quality products and at the same time reduce input costs.

Total Production Support	37,716	540	36,765	547	33,747	560

Crop Production Development Research: In 1985-86, continued research will be undertaken for the development of cultivars with superior yield and quality, increased resistance to pests and diseases and better adaptation to adverse soil and weather conditions.

During 1983-84, 24 new varieties of cereal, forage and field crops and 11 new horticultural varieties were either licensed or introduced to the industry. These varieties pertained to wheat, canola, barley, forage grasses, field beans, tobacco, potatoes, and apples. For example the new wheat variety Columbus, first seeded in 1983, has provided farmers with a wheat that is resistant to serious problem of early sprouting, has improved yield, and has extra resistance to leaf rust. This variety will assure Canada's reputation for high quality and dependability in the years to come. Advances were made in crop management systems for increased yields.

Production Support Research: Long-term fundamental research and services have application across a broad range of projects related to crop and animal production. In response to the National Biotechnology Strategy, research capabilities in biotechnology will be strengthened. Advanced genetic engineering procedures are being developed to improve nitrogen fixation capability in legumes and to transfer specific genes in crop species for more efficient plant breeding. Through programs on toxic chemicals, alternatives to chemical pesticides in the control of crop and animal pests will be developed. Effective detoxification procedures will be developed to reduce mycotoxin levels in contaminated corn and cereals.

Farm Input Supply Research: The development of efficient farm machinery and safe economical farm structures is essential for efficient animal and crop production at minimum input cost. New machines and building designs will continue to be made available to provincial extension agencies for use by farmers and building contractors.

Figure 16: Research on Production Development

Subactivity	Resources $000	Resources P-Y	Overall Output	Specific Initiatives FY 1985-86
Animal Production Development Research	45,489	544	Improvements in the efficiency of production and the quality of animals in support of market development.	Improved production systems for beef cattle as a result of implementing new technology on forage harvesting and storage and on pasture management, increased emphasis on locally produced feeds, and more efficient cow-calf and feedlot operations. Increased efficiency of milk production through continued assessment of the genetic potential of dairy cattle, improved nutrition and decreased feed costs, and methods to utilize the fundamental knowledge of basic physiology and reproduction in cows for improving productivity and reproductive efficiency. Improved accuracy in genetic evaluation of swine, improved pre- and post-natal piglet survival, and behavioral research to improve management of piglets. Breeding and nutrition studies to expand the knowledge of resistance to disease in poultry; improved knowledge of nutrient requirements, including use of full fat canola, low-protein starter rations. Information on breed comparisons and physiological responses in sheep, and advances in the efficiency of lamb production. Continuing studies on wintering of bees, bee nutrition, honey production and use of pheromones in hive management.
Crop Production Development Research	74,240	1,167	Improvements in the efficiency of production and the quality of crops in support of market development.	Identification of lines of wheat with superior resistance to sprouting, winterkilling, sawflies, and diseases such as rust, snow mold and leaf blight, and evaluation of new breeding techniques. Development of new early-maturing sunflower hybrids to expand production into nontraditional areas; improvements in canola cultivars with emphasis on higher yields, better oil and protein content, and resistance to blackleg and white rust. First indications as to the potential value of biotechnology techniques for developing superior cultivars of cereals, legumes, grasses, and canola hybrids, and for propagation of ornamental crops. Enhanced production of fresh and processed tomatoes through development of cultural and management packages; development of new potato cultivars for the Prairies, and of an energy-efficient harvesting system for potatoes. Improved cultivars and management systems for field peas and beans, buckwheat and peanuts. Improved techniques for chemical thinning and control of flowering in fruit trees.

Subactivity	Resources $000	Resources P-Y	Overall Output	Specific Initiatives FY 1985-86
Production Support Research	37,716	540	Ensure the availability and development of basic support services necessary for food and agricultural production.	Mechanisms to speed up plant breeding programs through biotechnological advances; greater efficiency in protein synthesis in ruminant animals through genetic alteration of rumen bacteria. Improved overwintering of crop plants through studies on cold acclimatization, freezing injury and overwintering damage. Safer means of pest control by determining atmospheric residue levels of herbicides, and developing technologies for using naturally occurring plant products, as well as integrated control strategies. Continued engineering, statistical, analytical, and technical support for research programs.
Farm Input Supply Research	978	20	Assist in ensuring the availability and quality of basic inputs to the food and agricultural production system.	Development of new building designs for farmers and building contractors with a view to achieving construction economies and safe and efficient buildings for animal production and storage. Continued development of new machines and mechanization systems for more efficient crop production.

Genetic Improvement: The federal government encourages continued improvements in production efficiency and product quality for the cattle, sheep and swine industries through programs designed to increase reproductive capabilities and overall production efficiency through identification and multiplication of genetically superior breeding stock. This in turn contributes to a viable livestock industry while meeting consumer demands for products and quality.

During 1985-86, the Department will introduce a redesigned Record of Performance Program which will provide breeders with advanced information for herd management, selection and decision making. This will improve the producer's capabilities to increase the productivity of their livestock through timely and efficient selection of breeding animals. Within the dairy sector, continued work is being done in order to increase the efficiency of cheese production and the quality of milk production. In response, the Department will expand the laboratory testing of milk samples for protein to cover 100% of all the herds, instead of the current 50%.

The production gains per animal performance tested in the five-year period (1979-83) are measured by overall production efficiency, quality of product, and actual estimates of genetic progress. Within the dairy cattle segment, the average milk and fat yield per cow has increased by 381 kg of milk and 15 kg of butterfat. The improved quality of Canadian pork is indicated by a reduction in backfat thickness of 2.5 mm over the five-year period, thereby substantially increasing the amount of lean meat per animal. An improved production trend is evident in the beef cattle segment, with an average gain in weaning weight of 18.0 kg and in yearling weight of 25.0 kg in the annual calf crop. This is also reflected in the improved average daily gain per calf. As with beef, sheep have also demonstrated an average weight gain per lamb of 1 kg at 50 days of age and 1.2 kg at 100 days of age. These gains impact on the national herd/flock through the dissemination of performance-tested breeding stock throughout the livestock population. As well they represent a monetary saving through improved production efficiency, and help ensure a quality product to the consuming public.

Genetic selection relates directly to the number of performance-tested livestock. Greater numbers of performance-tested animals will have a faster, more positive impact on the efficiency and quality of livestock production. Enrollment continues to increase. The number of herds enrolled in the Record of Performance (ROP) programs for 1983 was 8,078. Some 473,925 animals were enrolled in the programs in 1982, up from 470,931 in 1982. As well, 69,715 sires were evaluated through the Department's programs in 1983, up from 67,807 in 1981. Although the number of herds enrolled in the programs has stabilized, the number of animals continues to increase.

Complementing performance testing of livestock is the visual assessment of traits relative to longevity and structural soundness. This is carried out through the showing of livestock at agricultural fairs and exhibitions. The Department provides financial assistance to approximately 210 annual fairs and exhibitions conducting livestock shows in line with set standards. A major spin-off of such shows is the increased visibility of quality Canadian livestock to foreign and domestic buyers. In addition in 1983-84, as a result of a Special Recovery Capital Project the Department was able to expend $4.3 million at the Canadian Western Agribition to contract, expand and improve exhibition facilities. The transfer payments in support of fairs and exhibitions are set out in Figure 17.

Figure 17: Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Canadian Western Agribition	100	100	100

Special Recovery Capital Project & Western Agribition			4,300
	2,776	2,888	6,913

Crop Improvement: In order to broaden the crop production base in each region in Canada, financial assistance is provided to the private sector for crop development through the New Crop Development Fund. The New Crop Development Fund is unique since it brings an equivalent amount of investment from the private sector in support of these projects. The primary objective of this fund is to assist the commerical evaluation and development of new crops and improvement of crops beyond the basic research or plant breeding stage. As well, the fund attempts to accelerate the commerical adoption of those crops demonstrating potential for commercial agriculture. In 1985-86, this fund will assist 27 projects. Federal contributions in terms of type of crop and recipient are outlined in Figures 18 and 19 respectively. As well, in 1985-86, winter and early spring weather conditions in western Canada will be monitored for drought conditions, and regional studies of

production potential will be carried out. Work on changing crop production practices and patterns in relation to reducing soil degradation and improving the long term sustainability of the land resource base for agriculture will be investigated.

In 1983-84 Cabinet approved an extension of the New Crop Development Fund for five years to March 31, 1988 at a funding level of $750,000 per year. This has provided funding for 27 crop development projects at a cost of $723,000 in 1983-84.

C. Research and Information Related to Processing, Distributing, Retailing and Consumer Concerns

Objective

To increase efficiency, technological innovation and product development in the food processing and distributing sectors, and to assist in ensuring the consumer a dependable supply of safe and nutritious food.

Resource Summary

This Activity accounts for 2% of the Agri-Food Development Program financial resources and 3% of its person-years.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Processing Research	22,776	119	25,845	101	7,747	83
Distributing Research	1,603	26	1,444	23	1,473	24
Food Quality and Nutrition Research	2,692	32	2,657	38	1,573	23
	27,071	177	29,946	162	10,793	130
Revenue	402					

About 57% of the total resources shown above are allocated to capital, mainly due to the construction of the Research Centre at St-Hyacinthe, 30% allocated to salaries, and the remaining 13% to other operating costs, including maintenance of capital assets.

Past Financial Performance

The major changes that occurred in the financial requirements during 1983-84 are given in Figure 21.

Figure 21: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Processing Research	7,747	4,636	3,111
Distributing Research	1,473	1,090	383
Food Quality and Nutrition Research	1,573	2,637	(1,064)
	10,793	8,363	2,430

Explanation of Change: Increases in expenditures were due to construction of the Food Research Centre, St-Hyacinthe, Que. (a Special Recovery Capital Project), and additional resources ($1.9 million) were approved in Supplementary Estimates. Construction of the Meat Facility at Lacombe, Alta., was completed, using capital resources ($0.7 million) that were planned in the Main Estimates for use in the Research on Production Development activity.

Description

Through this Activity, the Department contributes to the development and improvement of the food processing sector, currently a $30 billion industry (wholesale value). This Activity has three elements: Processing Research, Distributing Research, and Food Quality and Nutrition Research.

Processing Research: This is directed to the development of new food processing technology and to improving the efficiency of the food processing system. Background research is conducted on the chemical and physical changes in food during processing. New ingredients, products and instruments are developed for private industry evaluation.

Distributing Research: This research aims to reduce energy costs related to the transport and storage of commodities, to improve storage conditions and extend the shelf life of agricultural products, and to increase the domestic and export market potential of commodities and products.

Food Quality and Nutrition Research: Research is undertaken to define potential hazards of undesirable material in feedstuffs and foods by studying their occurrence and their interactions in the food system and to develop procedures for their removal or prevention. Nutrition research focuses on the nutritional qualities of certain food components, on the availability of natural nutrients, and the nutritional value of certain foods.

Performance Information/Resource Justification

Food research in Agriculture Canada is conducted by 57 scientists located at eight major establishments at a cost of $10.7 million annually. In addition, research is contracted out to the private sector and to universities at a cost of $2.2 million. Specific initiatives for 1985-86 by subactivity are summarized in Figure 22. Additional details are outlined below.

The total research effort by the food industry in Canada amounts to $30 million, representing an expenditure of less than 0.1% of the wholesale value of food products, and is only one-ninth of the average research expenditures by Canadian industry as a whole.

Processing Research: New products and processes are developed through this research, and the resulting technology is transferred to private industry. A major initiative in 1985-86 will be the completion of the Food Research Centre at St. Hyacinthe, Que., at the cost of $35.7 million. The centre will pave the way for joint research with industry on new technologies needed to develop a food industry based on maximum use of regional agricultural production.

Distributing Research: Effective and acceptable control measures for insect pests in cereals and oilseeds will be developed to assist in maintaining their export marketability. Increased knowledge of fundamental storage problems will be sought and new and improved technology for storing fruits and vegetables will be developed and recommendations made to extend the storage life of domestic produce with a view to replacing imports where possible.

Food Quality and Nutrition Research: In 1985-86, research will continue on the inhibition of spoilage organisms in cured meats, including methods to control surface mold growth in uncooked cured meats. Investigations on mycotoxin contamination of cereals will focus on the effect of milling practices, and on identifying mycotoxins other than vomitoxin and assessing their toxicity. The nutritional availability of vitamins in cereals and in fresh and processed vegetables will be studied.

Figure 22: Research and Information Related to Processing, Distributing, Retailing and Consumer Concerns

Subactivity	Resources $000	Resources P-Y	Overall Output	Specific Initiatives FY 1985-86
Processing Research	22,776	119	Promotion of increased technological innovation and efficiency in the processing sector.	Development of improved processes for high-quality milk and milk products through research on storage, bacterial cultures and basic structure of dairy products; and for restructured meat products through better knowledge of nutrient composition and factors affecting quality. Assessment of new fruit and vegetable cultivars for processing; development of methods to extract and concentrate essential oils from native plants; information on systems for recycling blancher effluent from fruit and vegetable processing. Development of high-quality liquid diets for vealer dairy, beef and herd replacement calves, including increased use of whey proteins. Development of economic processes for manufacturing nutritive, functional and nontoxic ingredients from oilseeds for human consumption. Development of new products such as pear juice concentrate, low-sodium pickles and heat-sterilized pouch packs for fruit desserts.
Distributing Research	1,403	26	Increased efficiency in the distribution sector.	Development of safe and effective control measures against insect pests that may threaten exports of Canadian seeds and seed products. Preparation of guidelines for reducing the production of mycotoxins in stored products and for detecting damage in stored grains and oilseeds. Increased knowledge of fruit storage including the prediction of rot, prevention of fruit deterioration, and application of a metabolic block against enzyme systems that cause breakdown. Improved technology for storing fruits and vegetables such as semi-permeable film coatings; new handling and storage procedures for crops such as broccoli, cabbage and carrots.
Food Quality and Nutrition Research	2,492	32	Information and technology for ensuring the safety, quality and nutritive value of edible agricultural products.	Improved safety of cured meats through studies on the role of nitrites in reducing spoilage and on methods to control growth of surface mold. Enhanced knowledge of mycotoxin contamination of cereals including effects of milling practices and procedures to identify and isolate mycotoxins other than vomitoxin and to assess their toxicity. Continued studies on nutritional quality of fresh and processed vegetables, including folates and vitamins A and C, and factors affecting B vitamins; development of advanced methods for evaluating nutrients in cereal products.

D. Market Development and Economic Analysis

Objective

To assist and stimulate the agri-food sector in its market development efforts aimed at increasing Canadian self-sufficiency, expanding exports and increasing demand for domestic products, so as to increase economic viability at the enterprise level throughout the agri-food sector.

Resource Summary

This Activity accounts for 4% of the Agri-Food Development Program expenditures and 5% of the person-years.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Market Development	2,413	43	3,294	47	1,865	29
Marketing Effectiveness and Economic Viability	41,967	237	43,261	226	25,202	239
	44,380	280	46,555	273	27,067	268
Revenue	550	-	550	-	880	-

Of the total expenditures in this Activity, salaries and wages account for 30% and transfer payments account for 64%. The balance of 6% represents support for operations in communications and travel, supplies, printing and distribution of market and consumer information and commodity and market outlooks. The revenue is generated as set out in Figure 51 on page 87. It is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 24 sumarizes the major changes in financial requirements that occurred in 1983-84.

Figure 24: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Market Development	1,865	1,562	**303**
Marketing Effectiveness and Economic Viability	25,202	26,004	**(802)**
	27,067	27,566	**(499)**
Revenue	880	377	**503**

Explanation of Change: Generally, the net loss accrued as a result of the Fruit and Vegetable Storage Construction Financial Assistance Program receiving approval too late in the year to take full advantage of alloted funds. During the year, priorities within the Branch were realigned, resulting in changes within the elements.

Description

Through this Activity, the Department works with producer marketing groups and organizations, agri-food businesses, and provincial and federal departments and agencies to improve the efficiency and effectiveness of agri-food marketing systems, to enhance the economic viability of the food and agricultural sector, and to develop and maintain national and international markets. Operations are designed to encourage and stimulate the sector's efforts to enhance its competitiveness and the marketability of Canadian food and agricultural products, increase the market share of Canadian food and agricultural products, ensure the continuity of supply and improve returns to producers. The Activity consists of two elements.

Market Development: This element helps the agri-food sector to take advantage of market opportunities by improving the links between buyers and sellers, financially assisting domestic campaigns to promote Canadian agricultural food products, and conducting technical and fact-finding missions in foreign countries. Incoming buying missions are assisted to ensure their purchasing needs are met by Canadian sources. For example, the showcase herds located at the Experimental Farm allow foreign buyers to examine a high quality sample of Canadian Livestock. The Department contributes to multilateral and bilateral trade agreements for agricultural products to guarantee reasonable access of Canadian products to foreign markets and to ensure that foreign products do not constitute unfair competition for domestic Canadian products.

Marketing Effectiveness and Economic Viability: This element collects, analyzes, interprets and issues commodity statistics, market information, consumer information, forecasts on national and international demand, supply and pricing, as well as assessments and reports on the impact of national and foreign programs, legislation, policies, trade practices and commodity flows on the economic situation of Canadian producers and processors. It offers advice on the design of institutions which affect agricultural marketing, trade and producer returns.

Producer groups are encouraged to improve their marketing practices and the quality of their storable crops by means of financial contributions to construct modern climate-controlled storages for fruits and vegetables. Loan guarantees to producer groups and cooperatives under the Agricultural Products Cooperative Marketing Act (APCMA) and the Advance Payments for Crops Act (APCA) provide for pre-sale cash advances on stored crops and reduce post-harvest price depressions and short-term cash flow problems at the producer level. Interest on cash advances is paid to the Canadian Wheat Board on farm stored grain for Western producers under the Prairie Grains Advance Payments Act. The Board also receives reimbursement under the Act when grain producers default on repayment of cash advances. Under the Agricultural Products Marketing Act (APMA), 79 provincial marketing boards are delegated

federal powers in order to regulate interprovincial and international movement of products and to collect levies from producer members to offset marketing costs.

National Farm Products Marketing Council: The council is a federal supervisory body that monitors the establishment, operation and performance of the national marketing agencies in accordance with the Farm Products Marketing Agencies Act. There are now three national agencies, for eggs, turkey and chicken. The council also works with the national agencies and the provincial governments to promote more effective marketing of regulated farm products and to defend Canadian consumer interests.

Performance Information/Resource Justification

Market Development: The 43 person-years and $2.4 million in operating are engaged in various activities that assist the agri-food sector to take advantage of market opportunities. 68% of the person-years are used to diffuse marketing food and nutrition information through market data, promotional booklets, newsletters and using all facets of the news media. 32% are used to conduct technical trade missions, to potentially increase export markets for Canadian products, services and technology, and identify foreign market requirements.

An additional $800,000 and two person-years have been allocated in 1985-86 to concentrate on an export expansion projects. An example of these projects will be to identify possible technical trade barriers to exports, provide the expertise to overcome such barriers and thereby assist the entry of agri-food products to foreign markets.

Financial incentives are provided through transfer payments in the form of various grants and contributions. Private sector projects for promoting products or for identifying market opportunities valued at over $2 million, are encouraged by an average 25% financial participation. Details of transfer payments are summarized in Figure 25.

Figure 25: Market Development Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grant			
To assist in the marketing of agricultural products	20	20	17
Contribution			
To promote the sale of Canadian seed potatoes	181	191	130
To Canadian commercial organizations, industry associations, universities and institutes for the purpose of stimulating improvements in the marketing of Canadian agricultural and food products	250	250	247
	451	461	394

Showcase Herds: The showcase herds located at the Experimental Farm consist of high-quality examples of Canadian dairy cattle, beef cattle, swine and sheep. These herds provide foreign and domestic visitors with a good display of modern production practices.

In 1985-86, the effectiveness of the showcase as a marketing tool will be increased by the addition of electronic displays of information on the Canadian Livestock Industry.

In 1983-84, approximately 200,000 visitors, including about 5,000 foreign visitors, toured the showcase facilities. Out of 72 countries purchasing semen or purebred cattle in the last four years, 63 have visited the showcase. The Showcase Herd Program was expanded in 1983-84 to include a Swine and Sheep Showcase. The Swine Showcase Barn was opened to the public in August 1983 and the Sheep Barn was opened in October 1983.

Marketing Effectiveness and Economic Viability: The 237 person years and $41.9 million operating engaged in this element organize, analyze and interpret market and economic data information and conduct economic research. Their forecasts on the agricultural market trends (domestic and foreign) input to trade negotiations and aid the government and industry decision-making process. Effectiveness has been shown by the development of policies in the area of Feed Grain, Red Meat, Dairy and Transportation (Crow Rate). Activities are initiated to solve marketing problems of various sectors of the market place from producers to consumers. Conferences such as the Air Cargo Forum and the Shippers-

Carriers Conference have permitted interested parties to bring an element of solution to structural marketing problems resulting in more efficient and effective marketing systems.

$600,000 will be used to fully computerize the manual information collection and dissemination system. The schedule will commence in 1985-86 with the livestock commodity group. Once developed, the system would deliver current market information on domestic and international prices, supply, quantities and qualities of goods traded, movements and other information for the use of Canadian producers, processors and distributors. Buyers and sellers in the marketplace will be able to obtain commodity information in time to influence their immediate day-today decisions. The information will be disseminated in formats tailored to the capabilities and preferences of the recipients. Computerization will reduce the current time and resource-consuming method of physical collection.

Support is also provided in the form of transfer payments. These are summarized in Figure 26.

Figure 26: Marketing Effectiveness and Economic Viability - Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grant			
Canadian Horticultural Council	30	30	30
Agencies established under the Farm Products Marketing Agencies Act	200	100	-
Contribution			
Advance Payments for Crops Act	12,000	8,000	4,308
Prairie Grain Advance Payment Act	14,000	12,000	-
Agricultural Products Cooperative Marketing Act	-	-	6,808
Canada Grains Council	85	90	89
Fruit and Vegetable Storage Construction Assistance	1,200	3,620	2,551
Contribution to the United Co-Operative of Ontario	-	7,500	-
	27,515	31,340	13,786

In accordance with the Farm Products Marketing Agencies Act, a grant of $200,000 is made available should the formation of new agencies be approved in 1985-86. The grant to a maximum at $100,000 per agency, would be used to defray the costs involved in the establishment of an agency.

The Advance Payments for Crops Act and the Prairie Grain Advance Payments Act contributions facilitate the orderly marketing of storable crops by providing producers, through their organizations, with

interest-free cash advances between harvest and sale of the product. This alleviates the post-harvest price depression and allows producers to sell their crops in response to market demands and opportunities over a longer time frame. Guarantees on cash advances of $200 million will be made to marketing organizations, representing 15,000 producers at a cost of approximately $12 million.

The Agricultural Products Cooperative Marketing Act guarantees bank loans for initial payments and operating costs to marketing organizations that market products cooperatively and pool returns. If the average selling price, plus operating costs as guaranteed are lower, the crown is liable for the difference. Under the guarantee a liability payment of $7.5 million was triggered in 1983-84.

The Fruit and Vegetable Storage Construction Financial Assistance Program aims through improved storage and capacity to extend the marketing season for domestic produce and to reduce the reliance on imported fruits and vegetables. During the 1985-86, the program will provide $1.2 million in assistance toward the construction of new or modernized fruit and vegetable storage facilities.

National Farm Products Marketing Council: Total resources in this Activity element for the fiscal year 1985-86 consist of $1,839,000 and 28 person-years to supervise agencies set up to administer national and regional marketing plans. Approximately 70% of the person-years ensure existing and/or new national agencies comply with the Act, federal/provincial agreements, and national plans for regulated products. Fifteen per cent ensure that on the average producers receive an adequate return on their investment and that the Canadian consumer is protected and is paying a fair price for the regulated commodities. Another 5% liaise with nonregulated producers or processors to determine the validity of a national agency to control total product. The remaining 10% of resources are associated with the administration and support of the Council and its components.

E. Farm and Regional Policy Development and Economic Analysis

Objective

To facilitate the development of the agri-food sector in each region within the national framework and in accordance with its market potential, and to work in collaboration with provincial government departments, other federal departments and non-governmental organizations.

Resource Summary

This Activity accounts for 4% of the total Agri-Food Development Program expenditures and 4% of the person-years.

Figure 27: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Regional Development	46,291	199	47,577	180	38,400	154
Development Policy	2,065	65	2,100	65	2,362	42
	48,356	264	49,677	245	40,762	196

Approximately 23% of the expenditures in this activity are used to cover personnel costs. Transfer payments in the form of contributions, as set out in Figure 29 on page 3-54, account for 44%, with the balance used for other operating costs and capital.

Past Financial Performance

Figure 28 summarizes the major change in financial requirements that occurred in 1983-84.

Figure 28: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Regional Development	38,400	32,854	5,546
Development Policy	2,362	1,680	682
	40,762	34,534	6,228

Explanation of Change: The change is due to the following:

- implementation of Phase 1 of the Compensation and Re-establishment Scheme for the for the Eastern Canada Apple Industry ($9.4 million);
- approval of a NEED program for the construction of certain facilities at the Atlantic Winter Fair ($455,000);
- approval of a contribution to the Mersea Township, Ontario for dyke protection works ($800,000);
- approval of a Federal Development Strategy for Prince Edward Island ($230,000); and
- a decrease of $5.2 million and 13 person-years as a result of delays in implementing regional development programs and initiatives in special areas.

Description

Regional Development: The Department provides assistance directly or jointly with provincial governments, through development initiatives that are designed to guide the short-, medium- and long-term development of the agri-food sector. The initiatives undertaken are designed for the private sector in order to increase production and efficiency in production and marketing while contributing to income opportunities for producers, regional job creation opportunities and human resource development. This includes providing financial assistance, technical advice and expertise for projects in research, production [illegible] aimed at improving production and marketing in the agri-food sector. These activities are developed in close consultation with the provinces.

Development Policy: This element carries out economic analyses and provides policy, program planning, and strategy development advice focused on the development of the primary sector. Priority areas of concern include regional development, agricultural resources (land, labour and capital), energy and farm input supply.

Performance Information/Resource Justification

Regional Development: This element contributes to an average 5% growth in the production of agricultural products and in the net producer income through: renewed and new agriculture subsidiary agreements; development of programs through contribution payments; and direct contact with all segments of the agri-food sector. The Department annually updates provincial economic profiles of the agri-food sector to form the basis for the development of short-, medium- and long-term agri-food policies and programs. Details of the expenditures, through transfer payments in the form of grant and contribution funding, are shown in Figure 29.

Figure 29: Transfer Payments for Regional Development ($000)

Initiative	Total Amount Authorized	Expended to March 31/84	Forecast 1984-85	Estimates 1985-86
Direct Delivery				
Prince Edward Island - Federal Development Strategy	4,836	3,389	672	-
Southeast New Brunswick Program	2,551	805	783	812
Nova Scotia Agri-Food Development Agreement	16,824	4,133	5,121	4,192
Magdalen Islands	1,346	67	611	-
Lower St. Lawrence and Gaspé	3,070	-	1,220	650
	28,627	8,394	8,407	5,654
Agriculture Subsidiary Agreements				
Newfoundland	14,707	13,624	900	-
New Brunswick	27,698	27,642	-	-
Quebec	61,960	60,867	695	-
Manitoba	11,100	6,174	2,500	1,800
British Columbia	30,000	22,846	5,014	-
	145,465	131,153*	9,109	1,800

* Of this amount, $102 million was expended by the Department of Regional Economic Expansion prior to the transfer of the agreements to Agriculture Canada.

In southeast New Brunswick, the Productivity Enhancement Program provides technical and financial assistance to the private sector to upgrade producer productivity, to improve the use of farms' physical resources and to accelerate the transfer of technological innovations within the region. The Marketing Development Program provides producers, processors and other agents in the agri-food system with technical, financial, and institutional resources so they can respond effectively to opportunities in domestic and export markets. A total of $3.6 million in Federal expenditures has been approved for the program, of which $1.1 million ($0.812 million in contribution, $0.3 million - other operating) will be spent in 1985-86.

The Lower St. Lawrence and Gaspé Agri-Food Development Plan completed its first full year of operation in 1984-85. This program is designed to promote the trial and adaptation of new production methods or productions which allow diversification and expansion in regional agri-food production, as well as to improve and increase storage capacity in the peripheral areas of the region. Assistance will be provided to producers, producer groups, associations, syndicates and manufacturers for distributing agricultural equipment, products or inputs. In addition, renovations to the facilities at the La Pocatière Experimental Farm will be undertaken to upgrade the research capability in the region. The funding required for 1985-86 is $4.0 million ($0.650 million in contribution; $3.4 million in other operating and capital) for a total of $12.3 million.

The programs delivered by the federal government under the Canada/Nova Scotia Development Agreement are directed toward market development, technology acceleration and development, resource development and information. Moreover, the agreement includes a land development program funded and delivered entirely by the province. Of the total Federal expenditure of $23.3 million approved, $6.2 million ($4.2 million in contribution; $2.1 million in operating costs) will be spent in 1985-86.

In 1984-85, the Department will enter into new Federal/Provincial Agreements known as Economic Regional Development Agreements (ERDA's). These Agreements will be undertaken with the provinces of Prince Edward Island, New Brunswick, Manitoba and Saskatchewan. Under these new agreements, a total authorized federal expenditures of $104 million has been approved of which $23.9 million will be expended in 1985-86.

The objectives of these Agreements are to facilitate an improved economic performance within the agri-food sector through improved production efficiencies, to contribute to the long-run sustainability of the sector through improved soil and water management, to encourage crop intensification and the enhancement of livestock productivity through the development of marketable products and the development and the transfer of technology to the sectors and to expand employment opportunities. In 1985-86, a total of $23.9 million will be spent in pursuit of these projects. The ERDA Programs are multi-year efforts which will terminate in 1988-89. Programs will be monitored and adjusted for the duration of the Agreement to ensure that initiatives are leading to the attainment of program objectives. An interim and final comprehensive evaluation of the programs will be undertaken following completion of the program. Also in 1984 a new Federal Direct Delivery Program known as the Assistance Plan for Innovation and Technological Transfer in the Quebec Agri-Food Industry was approved under the ERDA umbrella. This plan, which will extend into 1988-89 at a total cost of $4 million, is aimed at increasing the productivity factors and the

degree of production preparation or value added in the agri-food production and processing industry which already has the capital required to increase production levels significantly. Planned expenditures in 1985-86 will total $1.1 million. An evaluation plan has been developed to facilitate the evaluation of the program. This evaluation will be undertaken following completion of the Program. Figure 30 identifies the distribution by Province of Federal expenditures for Economic Regional Development Agreements.

Figure 30 : Expenditures For Economic Regional Development Agreements (000's)

	1984-85	1985-86	Future Years	Total
Canada - Prince Edward Island ERDA Agri-Food Development Subsidiary Agreement	4,050	5,850	16,100	26,000
Canada - Manitoba ERDA Subsidiary Agreement on Agri-Food Development	1,000	4,600	17,400	23,000
Canada - Saskatchewan Agriculture Development Agreement	1,500	7,500	21,000	30,000
Canada - New Brunswick ERDA Agri-Food Agreement	2,100	5,900	17,000	25,000
Assistance Plan For Innovation and Technological Transfer in the Quebec Agri-Food Industry	450	1,100	2,450	4,000

In 1983-84, $8.3 million out of a planned $10.5 million was spent in Prince Edward Island, Southeast New Brunswick and Nova Scotia. These resources provided the means for funding projects related to the acceleration and development existing and new technology, market development and human resources. Other projects included improved drainage and ditching and crop production in such areas as potato crops and commerical production of cranberries. Due to delays in getting agreement signed, in receiving project submissions and in receiving requests for payments, $2.2 million was not spent in 1983-84. These funds have been put forward in future years based on the cash requirements, (see Figure 29).

In Prince Edward Island, the Federal Government has supported agri-food development through a range of programs under the Comprehensive Development Plan (1969-84) and the Federal Development Strategy (ending September 1984). At the end of September 1984, some $89.9 million will have been spent in the sector. The programs supported by provincial programs have contributed significantly to substantial improvements in the Prince Edward Island agri-food sector in the 1969-84 period. Annual net farm income for the period 1979-83

in 1981 constant dollars was $51 million - a 46% increase over the $35 million in 1981 dollars experienced in the period 1965-69. Physical output increased by 33% in the same period.

The five federal/provincial Agriculture Subsidiary Agreements which are all cost/shared agreements with Newfoundland, New Brunswick, Quebec, Manitoba and British Columbia were established to address regional disparities in the agri-food sector. In 1983-84, $10.8 million of a total of $13.0 million was spent. A total of $2.2 million was not expended as planned due to delays in the progress of projects. Funds will be rolled over to future years as cash requirements are needed (see Figure 29 for the cash flow).

Evaluations of the Newfoundland, British Columbia and Manitoba Agreements will not be completed before September 1986. In New Brunswick, an evaluation study concluded that the Agreement was the major catalyst in the generation of a $20 million annual increase in earned income and the creation of 300 full-time new jobs in the sector. The study also estimated that an additional 180 full-time jobs were created in related sectors and that 1,250 person-years of employment resulted from capital. In Quebec, funding was provided for 81 million linear metres of underground drainage for farmland. The result of the Program will be an estimated gross increase of $15.4 million in crop production revenues for farmers.

Development Policy: Economic analysis, strategic and policy advice and support services are provided by sixty five person years. These services support policy decision-making and regional program design and implementation. Areas of particular importance include regional agricultural development, farm finance and taxation, production costs, technology assessment and transfer, soil and water, agricultural energy, and other farm inputs. The economic analyses and forecasts also provide information for farmers and others in the private sector.

In 1985-86 the emphasis will be on assisting the Regional Offices with program development in the face of agricultural market and financial difficulties, on measures to deal with continuing farm financial problems, on developing and coordinating a national soil and water policy, on an improved technology strategy for the Department, on medium-term outlook information, and other analysis and advice as required by policy and program issues.

In 1983-84, considerable effort was directed to formulating strategies and providing policy advice for the development of government response to the worsening financial situation of farmers. Several studies were undertaken including a large-scale survey of the financial situation of farmers, carried out jointly with the farm energy requirements and use contributed to improved ability to provide

advice on appropriate adjustments. Significant contributions were made to the development of the federal position in the negotiations of the Tripartite Stabilization Program for Red Meats. In association with the regional development thrust of the government, policy, monitoring and evaluation requirements of the new ERDA's were analyzed and operational mechanisms developed.

F. International Development Assistance

Objective

To implement federal government foreign policy initiatives in the field of food and agriculture aimed at improving international food security, promoting international agricultural development and achieving wider foreign policy objectives related to social justice and global stability.

Resource Summary

The International Development Assistance Activity accounts for less than 1% of the Agri-Food Development Program expenditures and less than 1% of the person-years.

Figure 31: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
International Cooperation	1,344	18	1,419	18	943	18
International Development	1,003	5	922	5	903	4
	2,347	23	2,341	23	1,846	22

Approximately 43% of the expenditures in this Activity are used for personnel costs, 37% for transfer payments as detailed in Figure 33 on page 3-61, and the balance is used for other operating costs.

Past Financial Performance

Figure 32 summarizes the major change in financial requirements that occurred in 1983-84.

Figure 32: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
International Cooperation	943	1,130	(187)
International Development	903	1,014	(111)
	1,846	2,144	(298)

Explanation of Change: The favourable variance is mainly due to the rate of exchange being lower than anticipated for the Contribution to the Commonwealth Agricultural Bureau.

Description

The functions of the International Development Assistance Activity include liaison with international food and agricultural agencies, the collection and dissemination of international agricultural intelligence, the management of a number of foreign aid projects, and the provision of technical assistance to these programs. The Activity consists of two elements:

International Cooperation: This deals with various forms of international cooperation, including Canadian participation in international agri-food organizations. The Department, in cooperation with the Trade Commissioner Service of the Department of External Affairs, also collects information about foreign agricultural policies and programs and keeps the Canadian foreign service informed of Canada's agricultural policies. It coordinates the activities in Canada of a large number of visitors and foreign trade missions. Financial support is provided to the Commonwealth Agricultural Bureau, which provides a number of essential services to Canadian researchers in agriculture, forestry and health, as well as to the International Dairy Federation, which provides Agriculture Canada with the opportunity to contribute to and benefit from international development work in all facets of the dairy industry.

International Development: This provides one departmental point of contact for bilateral development assistance programs carried out on behalf of the Canadian International Development Agency (CIDA). The necessary secretariat tasks are performed to channel the scientific and technical expertise of the Program into the planning, execution and evaluation of overseas projects. In cooperation with various government departments and agencies involved in development assistance and export trade, technical support is also provided to assist Canadian firms to implement feasibility studies and to test Canadian technology in third world countries. Also, technical assistance policies and programs are coordinated at the corporate level. Attention has recently been focused on different forms of technical cooperation with industrializing countries, aimed at supporting the Department's agricultural export market development priority. Finally, arrangements are made for assigning departmental staff to international organizations and the Trade Commissioner Service.

Performance Information/Resource Justification

The Program's role in international development assistance is one of technical support for Canadian agricultural initiatives abroad. These initiatives focus on food aid, agricultural development and market development overseas.

The Program carries out these initiatives bilaterally, in relation to agricultural agencies and foreign governments, and multilaterally through involvement in six international organizations: the Food and

Agricultural Organization (FAO); the World Food Program (WFP); the World Food Council (WFC); the Organisation for Economic Cooperation and Development (OECD); the Inter-American Institute for Cooperation in Agriculture (IICA); and the Committee on Agricultural Problems, Economic Commission for Europe (ECE).

Agricultural expertise is mobilized through the management of an inventory of some 700 qualified personnel and through active recruitment of candidates for overseas agricultural developments projects. In 1985-86, departmental staff will be involved in the administration and execution of 19 CIDA-financed projects in Asia, Africa and Latin America, valued at about $70 million, over the next five years with $10 million slated for use in 1985-86.

Many of the professional staff for overseas projects come from the operating branches of the Department. Overseas research and technology projects are designed to be transferred to local staff for continuation in future years. Typical examples of successful technical assistance projects include dryland research in India, dryland wheat production in Tanzania and an economic planning project in Zambia. In a new approach to providing overseas technical assistance, the Research Branch has begun "twinning" certain research establishments with those in countries receiving assistance, based on the technical expertise required by the country.

Through this Activity the Program provides two contributions to international organizations, as illustrated in Figure 33.

Figure 33: Transfer Payments to International Organizations ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Commonwealth Agricultural Bureau	810	671	613
Fee for membership in the International Dairy Federation	15	15	14
World Food Day Association of Canada	60	60	
	885	746	627

G. Income Stabilization, Loans and Advisory Services

Objective

To promote equitable and stable returns to efficient producers by protecting incomes from market price instability and production uncertainties; and to encourage credit availability to farmers for the improvement and development of farms.

Resource Summary

The Income Stabilization, Loans and Advisory Services Activity accounts for 61% of the Agri-Food Development Program expenditures and 2% of the person-years.

Figure 34: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Crop Insurance	160,780	14	187,578	11	134,483	8
Income Stabilization	527,452	76	569,211	83	446,304	67
Other Compensation	6,233	-	21,787	1	11,492	1
Farm Management	922	13	870	13	452	13
Loan Guarantees and Advances	4,210	5	5,211	5	2,495	5
	699,597	108	784,657	113	595,226	94
Revenue	8,739	-	8,527	-	9,549	-

Contributions for income stabilization and crop insurance programs account for approximately 98% of the expenditures in this Activity. The balance covers personnel costs and other costs associated with buying, storing, transporting, or processing agricultural products.

Revenue is generated as set out in Figure 51 on page 3-87. It is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 35 summarizes the major change in financial requirements that occurred in 1983-84.

Figure 35: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Crop Insurance	134,483	145,517	(11,034)
Income Stabilization	446,304	386,287	60,017
Other Compensation	11,492	6,433	5,059
Loan Guarantees and Advances	2,947	2,753	194
	595,226	540,990	54,236
Revenue	9,549	7,990	(1,459)

Explanation of Change: The following major program expenditures for contributions were approved in 1983-84 Supplementary Estimates.

- $50 million increase for Dairy program
- $8 million increase for Agriculture Products Board
- $3.9 million increase for Farm Loan Interest Rebate
- $1 million increase for Migratory Waterfowl
- $60 million increase for Designated Commodities
- $57.6 million increase in statutory payment for Named Agriculture Commodities
- $11 million decrease for statutory payment for Crop Insurance.

Description

This Activity develops and delivers financial assistance programs which provide income protection against production and market risks, and implements programs designed to enhance business management and entrepreneurship at the farm level. These endeavours contribute to productive agricultural investment and encourage the production of supplies of agricultural commodities at fair prices to consumers. The activity is carried out through five elements.

Crop Insurance: Crop Insurance provides all-risk protection against natural production hazards to individual Canadian farmers. Provinces administer federally approved programs under federal-provincial shared-cost agreements. The federal government contributes financially to producer premiums and/or administration costs.

Income Stabilization: This element provides funding for the Agricultural Stabilization Board and contributions made under the Agricultural Stabilization Act, the operations of the Agricultural Products Board and the administration of the Western Grain Stabilization Act.

The Agricultural Stabilization Act: The Act provides for a price support program based on a prescribed percentage of the previous five-year average market return, indexed for changes in cash costs of production. The program is in place to protect farmers when, due to circumstances beyond their control, market prices fall below the support levels. The Statement of Expenditure of the Agricultural Stabilization Board for the year ended March 31, 1984 is set out in Figure 53 on page 3-89.

Dairy Support Program: To ensure fair returns to producers, the Canadian Dairy Commission administers dairy support programs composed of an offer-to-purchase program for butter and skim milk powder and a federal subsidy program. The subsidy program is funded through the Agricultural Stabilization Act.

The production of milk and milk products in Canada is managed under supply management systems operating at the national and provincial levels. There are two major milk markets: fluid milk (table milk and fresh cream) and industrial milk and cream (used for processing into dairy products such as butter, cheese, skim milk powder, ice cream, yogurt, evaporated milk, etc.). While both of these milk markets are related, each is administered under separate supply management programs.

Fluid milk is managed independently in each province. The supply of industrial milk and cream is determined in accordance with domestic requirements, which are allocated on a provincial quota basis. This is accomplished with the cooperation of the federal government (Canadian Dairy Commission), as well as provinces and dairy farmer representatives. About 65% of total milk production is used for industrial or manufacturing purposes.

Agricultural Products Board Act: The Act provides for commodity purchase and resale programs to protect farm returns of Canadian producers against significant downward fluctuations in commodity market prices. Sales revenue is credited to the Consolidated Revenue Fund. The Statement of Operations of the Agricultural Products Board for the year ended March 31, 1984 is set out in Figure 54 on page 3-90.

Western Grain Stabilization Act: Agriculture Canada administers the Western Grain Stabilization Account and makes payments in accordance with the Western Grain Stabilization Act.

Other Compensation: Compensation is provided in two areas: crop damage compensation in the three Prairie provinces for crop damage caused by migratory waterfowl; and payments respecting rebates of interest on eligible farm loans made under the Farm Credit Act.

Loan Guarantees: This element is responsible for administration of the Farm Improvement Loans Act. Under this Act, farmers may obtain short and intermediate-term credit to purchase agricultural implements and foundation livestock, and to finance a wide range of farm-improvement projects. The loans are made by designated lenders (including chartered banks) under a government guarantee of repayment. The maximum interest rate chargeable is the prime rate plus 1%.

Performance Information/Resource Justification

Crop Insurance: The crop production industry is continually subjected to natural hazards beyond the control of the individual farmer. Crop insurance plays a major role in reducing the need for emergency assistance programs when adversities such as drought, frost, hail or disease strike. The security and confidence provided by this program allow farmers to make long-term planning decisions, which are necessary for a successful operation.

Financial participation by the federal government is statutory and covers two areas:

- contributions toward farmers' premiums and/or administration costs; and
- loans to the insurer province when claims exceed premiums and reserves; or, as an alternative to loans, the federal government may enter into a reinsurance arrangement with a province to cover a portion of the liability of the province for the payment of indemnities under an insurance scheme.

Person-year resources are used to provide direction and coordination for policy and program development; conduct ongoing reviews and research of the actuarial soundness of individual insurance plans; and assist provinces in developing and promoting crop insurance programs.

Agreements between the federal government and the provinces of Manitoba, Saskatchewan, Alberta, Nova Scotia and New Brunswick include reinsurance provisions. The agreements with the provinces of Prince Edward Island, Ontario and British Columbia include loan provisions.

In 1985-86, it is estimated that approximately $160 million will be required for the Crop Insurance Program. Under the authority of the Crop Insurance Act, the federal government assists the insuring producer by contributing either 25% of the premium plus 50% of the administrative costs incurred by the provinces or 50% of the premiums where the province pays all of the administrative costs. The premium is based on a geographical and crop-risk-related assessment in keeping with this actuarially sound insurance scheme. The amount of insurance toward which the federal government will make a contribution cannot exceed 80% of the average yield in an area or on a farm. Experience on loss ratio has been relatively good, as shown in Figure 36.

Figure 36: Participation and Federal Contributions to Provincial Programs

	1983-84	1982-83	1981-82
Participation			
Number of plans	197	190	182

Cumulative loss ratio	0.86	0.84	0.84
Federal contributions	$133,963,184	$142,170,307	$115,850,183

Income Stabilization: Income stabilization programs protect producer income against market price fluctuations and enhance the competitive position of the major Canadian agricultural products, thereby ensuring a stable agricultural economy. Contributions to producers under the Agricultural Stabilization Act constitute the bulk of expenditures. A breakdown of these and other expenditures is detailed in Figure 37.

Under the terms of the Income Stabilization Act, the following named commodities must be supported at not less than 90% of their average price over the previous five years, with adjustments according to changes in production costs: cattle, hogs, sheep; industrial milk and cream; corn and soybeans; and oats and barley not produced in the area designated by the Canadian Wheat Board Act. Funds spent in support of these commodities at the 90% level are statutory. If the support is greater than the 90% level, the support funds must be voted.

Any other natural or processed agricultural product not named in the Act may be designated for support at a level determined by the Governor in Council. Such commodities are referred to as designated commodities and are generally supported at the same minimum level of 90%.

There are 61 person-years used on an annual basis to administer the Act and to issue payments to 52,441 producers across Canada.

Figure 37: Income Stabilization Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Transfer Payments under the Agricultural Stabilization Act			
Designated agricultural commodities	11,000	73,900	70,938
Named agricultural commodities			
- Industrial milk and cream	297,100	301,200	347,576
- Other	75,000	61,000	12,400
Western Grain Stabilization Act	130,500	112,049	121,889
Expenditures under the Agricultural Products Board Act for the buying, storing, transporting or processing of agricultural products	5,565	17,565	12,584
	519,165	565,714	565,387

The Estimates for 1985-86, as shown in Figure 37, include a provisional amount of $11 million. However, it is not possible to forecast commodity market prices accurately until the growing season is well under way and, therefore, these amounts must sometimes be adjusted through the Supplementary Estimates.

The federal government is primarily responsible for controlling the supply of milk used for industrial purposes through the operations of the Agricultural Stabilization Act and the Canadian Dairy Commission. The Canadian Dairy Commission is the federal agency that has the responsibility for administering the federal dairy policy. The Dairy Support Program is based on a subsidy rate of $6.03 per hundred litres on forecast total Canadian consumption plus an export quota. Payments to producers (which reduce consumer costs for dairy products) are made through the Canadian Dairy Commission.

Western Grain Stabilization Act: Fifteen person-years are used to administer the Western Grain Stabilization Act by controlling the Western Grain Stabilization Account and servicing the accounts of some 120,000 participants in the program.

Other Compensation: Compensation payments, as shown in Figure 38, are made to farmers in the three Prairie provinces for crop damage caused by migratory waterfowl (ducks, geese and sandhill cranes). As well, the Farm Loans Interest Rebate Act authorizes payments relating to interest rebates on eligible farm loans made under the Farm Credit Act. This is administered by the Farm Credit Corporation but funded through this Activity.

Figure 38: Other Compensation ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Migratory Waterfowl	2,921	1,500	1,144
Farm Loans Interest Rebate	3,312	11,287	10,348
Excess Moisture	-	9,000	-
	6,233	21,787	11,492

Loan Guarantees: Under the Farm Improvement Loans Act, loan guarantees, provided through lending institutions, increase credit availability to farmers of short and immediate credit at competitive interest rates, to purchase land, livestock and buildings thereby improving financial stability. Figure 39 provides details on the loans guaranteed under this program (for years ending December 31).

Figure 39: Farm Improvement Loans Act - Summary of Operations

	Loans Made		Balance of Loans Payable at	Claims Paid		Recoveries
Year	Number	Amount	Year-End	Number	Amount	on Claims Paid
		($000)	($000)		($000)	($000)
1979	25,309	265,475	552,000	118	354	132
1980	19,439	222,435	559,072	120	436	106
1981	15,266	187,798	512,981	124	514	176
1982	15,782	211,486	512,979	137	1,014	149
1983	15,106	207,791	519,275	240	2,301	251
1984	14,000	200,000	525,000	300	4,000	250
1985	14,000	200,000	525,000	325	5,500	300
1986	14,000	200,000	525,000	360	6,200	350

The claims paid by the federal government constitute a statutory contribution.

In the 1983 calendar year, 15,106 loans were guaranteed amounting to $207.8 million. The average loan guarantee made during the year was $13,755. Of the total amount borrowed from lending institutions, $137 million or 65% was used to purchase agricultural implements, $25 million or 12% was utilized for construction, repair or alteration of farm houses and buildings, while $45 million or 23% was used to purchase land and related improvements, and livestock.

H. Prairie Farm Rehabilitation

Objective

To institute and undertake soil and water conservation programs and projects that will enable the preservation, management, development and use of the basic resources to support economic stability and growth.

Resource Summary

The Prairie Farm Rehabilitation Activity accounts for 6% of the Agri-Food Development Program expenditures and 16% of the person-years.

Figure 40: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Rural Soil and Water Conservation and Development	34,443	495	35,956	499	27,974	462
Water Resource Development	29,946	253	18,142	254	12,285	252
Management Activities	6,800	131	7,119	132	7,920	162
Emergency Assistance	1,040		59,444	6	-	-
	72,229	879	120,661	891	48,179	876
Revenue	16,228		43,176		12,754	

Revenue is generated from pasture and grazing fees, returns on investments, proceeds from sales of land and bulls, water service charges and recoverable costs for project operations. Revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program. The 1984-85 and 1985-86 revenue increases are the result of 50% cost shared program with the provinces. More detail on this revenue is provided in Figure 51 on page 3-87.

Of the total expenditures, approximately 43% are for personnel costs, 4% for bull purchases, feed and fodder, 9% for other operating costs, 32% for capital items, and 12% for contribution payments and loans.

Past Financial Performance

Figure 41 summarizes the major change in financial requirements that occurred in 1983-84.

Figure 41: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Rural Soil and Water Conservation and Development	27,974	-	27,974
Water Resource Development	12,285	-	12,285
Management Activities	7,920	-	7,920
	48,179	-	48,179
Revenue	12,754	-	(12,754)

Explanation of Change: Resources for the 1983-84 Main Estimates were appropriated through the Department of Regional Economic Expansion, and transferred to Agriculture Canada in 1983-84 Supplementary Estimates.

Description

The Prairie Farm Rehabilitation Administration (PFRA) functions as an agency within the Agri-Food Development Program. The agency administers a wide range of water source development programs for a variety of agricultural uses, as well as a major land use program and other soil conservation programs. It operates across the provinces of Alberta, Saskatchewan and Manitoba to deliver the programs under the Prairie Farm Rehabilitation Act. Headquartered in Regina, Saskatchewan, with offices across the Prairies, the agency carries out its operations through three elements:

Rural Soil and Water Conservation and Development: Programs in this element include the development of water supplies for rural domestic, stockwatering and irrigation purposes. As well, the element actively promotes improved land use practices. Soil conservation programs include a tree seedling production and distribution program, a community pasture program, and land degradation studies. Water development programs include on-farm, group and small community water supply programs, an irrigation demonstration farm, and the operation and maintenance of irrigation projects in southwestern Saskatchewan.

Water Resource Development: This element investigates, designs and implements medium- to large-scale single and multi-purpose water resource projects. Programs include: engineering services for the Agricultural Service Centres; operation and maintenance of the South Saskatchewan River project; maintenance of the Assiniboine River dykes;

rehabilitation of major irrigation works in Alberta; planning and engineering related to a variety of multi-purpose projects and schemes; as well as technical, management and administrative support for programs in this and other elements.

Management Activities: This element includes sub-elements that develop, guide and support programs to meet the agency objective. The Director General, with branch directors and support staff in Regina and provincial affairs offices in Edmonton and Winnipeg, provides executive and general management for the agency. The policy and analysis sub-element provides policy and program analysis and evaluation, and provides information to the public. Support services include finance, personnel, land administration, and accident prevention, as well as computer services, materiel management and general administrative services.

Emergency Assistance Program: This element was established to facilitate development, administration and delivery of special assistance programs introduced to mitigate the effects of drought on the economic stability of Prairie agriculture. The Prairie Livestock Drought Assistance Program is being administered and delivered in conjunction with the Provinces. Other drought assistance program initiatives may be negotiated and introduced as required.

Performance Information/Resource Justification

PFRA activities remove the constraints to economic development imposed by chronic water shortages and a fragile soil resources or take advantage of development opportunities consistent with careful resource management. To meet its objective and the demand for program services, the agency will require $72.2 million and 879 person-years in 1985-86. The percentage distribution for the three elements of the activity are presented in Figure 42.

Figure 42: Percentage Distribution of 1985-86 Resources

	% of $	% of P-Y
Rural Soil and Water Conservation and Development	48	56
Water Resource Development	41	29
Management Activities	9	15
Emergency Assistance	2	-
	100	100

Rural Soil and Water Conservation and Development: Programming in this element is undertaken to enhance the Prairie agricultural economy through the development of rural domestic and agricultural water supplies for individuals, groups and small communities, and the active promotion of improved land use practices.

Over the next five years, as part of the Canada-Manitoba Subsidiary agreement on Agri-Food Development, Prairie Farm Rehabilitation will provide an integrated soil conservation and management program. This program will provide technical and financial incentives, soil conservation plans and the means to conduct investigation relating to head water storage, and control of water related erosion.

Under the Canada-Saskatchewan Agreement on Agricultural Development, the Prairie Farm Rehabilitation will increase its program thrust in order to raise the efficiency of agricultural production through the removal of soil related constraints, such as salinization, wind and water erosion, and acidic and solonetzic soil. Program delivery will therefore be increased in such areas as diagnostic analysis, technical and financial assistance and information dissemination at the farm level with the intent of minimizing summerfallow and the frequency of tillage. An Irrigation Demonstration Farm, located in Manitoba, is presently under development and is expected to be fully operational in 1987-88. The total cost of the project is $3 million of which $531,000 is planned for 1985-86. Improved irrigation techniques and irrigated crop responses will be demonstrated and the information technology transfer will be emphasized.

Water Resource Development: The objective of this element is to facilitate the development of a productive and drought-resistant Prairie economy through the promotion, investigation, design, and implementation of medium- to large-scale water resource projects. These projects provide dependable supplies of water for a variety of agricultural and related activities. In addition to support for other programs within PFRA, services are provided to individuals and groups, municipal and provincial governments, federal government departments, federal-provincial agencies, and international agencies.

Provisions of water supply, water treatment and waste disposal facilities for up to 42 designated agricultural centres will be provided under the Canada-Saskatchewan Subsidiary Agreement on Agricultural Community Water Infrastructure at a total cost of $32 million over the next five years, of which $16 million will be recovered from the Province. In 1985-86, an expenditure of $8 million is planned. During 1985-86, $9 million out of a total of $17.2 million is the planned expenditure on the rehabilitation of the Bassano Dam on the Bow River as the final stage of the 1973 Canada-Alberta Irrigation Rehabilitation Agreement.

Planning, investigation design and construction of water diversion, storage or delivery works for irrigation development will be undertaken over the next five years under the Canada-Saskatchewan Subsidiary Agreement on Agricultural Development.

Under the emergency assistance program, programs designed to mitigate the effects of drought on the economic stability of Prairie agriculture will be developed, administered and delivered, such as the Prairie Livestock Drought Assistance Program. This program provides financial assistance for the purchase of feed, fodder and other supplies, in short supply due to drought, to encourage farmers and ranchers to retain their basic herds. Post-delivery evaluation of this program will occur in 1985-86 as required under the terms of this program.

Management Activities: As described previously, this element includes a wide variety of services in addition to administrative support. It will require about 9% of the financial resources and less than 14% of the human resources.

I. Management and Administration

Objective

To provide program execution and management, administrative services, operational planning services, information services and physical plant and internal support services.

Resource Summary

The Management and Administration Activity accounts for approximately 5% of the 1985-86 Agri-Food Development Program expenditures and 17% of the person-years.

Figure 43: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Management and Administration	**30,216**	**575**	35,798	593	28,638	572
Technical Information Dissemination	**141**	**4**	346	3	359	3
Physical Plant and Support Services	**28,473**	**368**	29,312	409	29,335	444
	58,830	**947**	65,456	1,005	58,332	1,019
Revenue	**694**		694		584	

Approximately 55% of the expenditures in this activity are used for personnel costs, 30% for other operating costs, 13% for capital, and the balance for grants for agriculture research to universities and other scientific organizations in Canada.

Revenue is generated as set out in Figure 51 on page 3-87. It is credited directly to the Consolidated Revenue Fund and is not available for use by the program.

Past Financial Performance

Figure 44 summarizes the major change in financial requirements that occurred in 1983-84.

Figure 44: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Management and Administration	28,638	26,541	2,097
Technical Information Dissemination	359	399	(40)
Physical Plant and Support Services	29,335	24,511	4,824
	58,332	51,451	6,881
Revenue	584	799	(215)

Explanation of Change: Major construction funds from the activity Research on Production Development were utilized for major construction projects in Management and Administration ($1.8 million). Additional resources ($1.38 million and 17 person-years) under the Summer Canada Employment and New Employment Expansion Development programs were obtained. Internal reallocation of funds and the provision of $0.873 million for the Retrofit program allowed additional expenditures for minor construction and purchase of equipment.

Description

This activity is responsible for the general management of the Agri-Food Development Program and some of the common support services. It consists of the following elements:

Management and Administration: This element provides program management, including the offices of the Assistant Deputy Ministers, directors-general and directors, administrative services, operational planning services, information services and support services.

Technical Information Dissemination: This element covers the documenting and publishing of research results and techniques in order to inform the general public, and the agricultural community in particular, of the achievements and policies of the program.

Physical Plant and Support Services: Buildings, equipment and support services not dedicated to a specific activity are centrally administered. This element covers the costs connected with the operation and maintenance of these buildings, including utilities, janitorial services, repairs, grounds maintenance and common operational services such as farm foremen.

Finally, the activity encompasses the management of the following departmental programs: the Status of Women, Handicapped and Indigenous People; Non-Governmental Organization Relations; and World Food Day. The latter is dedicated to encouraging Canadians to become involved, both as individuals and as groups, in resolving global problems of food production and distribution.

Performance Information/Resource Justification

Management and Administration: Human resource planning will receive special attention, with continued efforts directed to the special program for the recruitment and training of scientists. Training programs for middle managers and supervisors will be given emphasis, and the Affirmative Action Program will be implemented.

Approximately 25% of the senior scientists in the Research Branch are due to retire shortly; this loss could leave a void in research capability. A program in cooperation with universities is aimed at recruiting and training candidates to replace this large population of older scientists. A total of 20 person-years were committed to this program in 1984-85, with an additional 10 person-years assigned for 1985-86.

Technical Information Dissemination: A wide variety of departmental publications for use by the public will be generated and processed under the Agri-Food Development Program. In 1985-86, special attention will be given to the centennial of the Experimental Farm Stations Act. Many of the research establishments will be preparing informative booklets on the history of their research activities, and a comprehensive history of the Research Branch will be published.

Physical Plant and Support Services: The Department, mainly in the Research Branch, has a major investment in facilities and equipment consisting of some 1,700 buildings, 30,000 hectares of land and 92,000 pieces of equipment. The Department has begun a maintenance study to estimate maintenance funding requirements. Initial findings confirm the need for a uniform maintenance program to ensure adequate planning, control, budgeting and implementation in order to maximize the life and utility of these assets.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Agri-Food Development Program expenditures by object are presented in Figure 45.

Figure 45: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	189,093	178,813	165,901
Contributions to employee benefit plans	26,444	22,894	24,521
Other personnel costs	702	631	1,289
	216,239	202,338	191,711
Goods and Services

Note: The person-year columns display the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 48 presents a summary by major category of the Agri-Food Development Program's capital expenditures. Figure 49 provides details on major capital projects which are those having expenditures of $250,000 or more.

Figure 48: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

4. Transfer Payments

Figure 50 presents a summary of all transfer payments expenditures of the Agri-Food Development Program. For details on the purpose of the more financially significant of these, refer to the page reference provided.

Figure 50: Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Research on Production Development			
Grant to the Organization for Economic Co-operation and Development	25	-	-
Royal Agricultural Winter Fair, Toronto	100	100	100
Canadian Western Agribition, Regina	100	100	100

B. Cost Analysis

Net Program Cost

The 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the program on a full cost basis. Also to be taken into account are any revenues generated by the Program that are credited directly to the Consolidated Revenue Fund.

Figure 52: Net Cost of Program by Activity for the Year 1985-86 ($000)

	1985-86 Costs	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	1984-85 Forecast
Research on Natural Resources	22,098	1,902	24,000	486	**23,514**	25,636
Research on Production Development	177,934	14,891	192,825	13,591	**179,234**	157,342
Research and Information Related to Processing, Distributing, Retailing and Consumer Concerns	27,071	951	28,022	402	**28,424**	30,897
Market Development and Economic Analysis	44,380	1,584	45,964	550	**45,414**	47,589
Farm and Regional Policy Development and Economic Analysis	48,356	1,267	49,623	-	**49,623**	51,051
International Development Assistance	2,347	158	2,505	-	**2,505**	2,503
Income Stabilization, Loans and Advisory Services	699,597	634	700,231	8,739	**691,492**	664,694
Prairie Farm Rehabilitation	72,229	5,069	77,298	16,228	**61,070**	82,553
Management and Administration	58,830	5,228	64,058	694	**63,364**	69,990
	1,152,842	31,684	1,184,526	40,690	**1,143,836**	1,132,255

The adjustments made to the estimated expenditures to arrive at a total net cost include $31.7 million other costs, which include accommodation provided without charge by Public Works and Agriculture accommodation $26.6 million, common service charges by DSS $.915 million, Employer's share of insurance premiums and costs $3.8 million and Dept. of Labour for employee compensation payments $.351 million and inclusion of all revenues generated by the Program. Revenue is detailed in Figure 51 page 3-87.

C. Additional Information

1. Agricultural Stabilization Board - Statement of Expenditure

Figure 53 provides the statement of expenditure of the Agricultural Stabilization Board for the year ended March 31, 1984.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $223,617,000 in support of the 1985-86 Agri-Food Regulation and Inspection Program. The remaining expenditures, estimated at $21,116,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Parliament has previously authorized a total drawdown of $2,000,000 for the Race Track Supervision Revolving Fund. The projected use of this authority as related to these Estimates is as follows:

Financial Requirements by Authority

Vote (thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
Agri-Food Regulation and Inspection Program		
20 Operating expenditures	179,960	169,608
25 Capital expenditures	35,495	15,598
30 Grants and contributions	8,162	12,627
(S) Contributions to employee benefit plans	21,116	18,453
(S) Race track supervision revolving fund	-	(473)
Total Program	244,733	215,813

Votes - Wording and amounts

Section 1
Program Overview

A. Plans for 1985-86

1. Highlights

In 1985-86, highlights for the Agri-Food Regulation and Inspection Program will be as follows:

- It is anticipated that tuberculosis will be eradicated from Canadian livestock in 1985-86, and the incidence of brucellosis will be further reduced toward its anticipated eradication in 1986-87 (see page 4-24);
- Twelve person-years and $2,000,000 will be used for a four-year project (1984-88) on the "Export Development of Agricultural Products" with an emphasis on the protection of international marketability of Canadian plant products (see page 4-25);
- Thirty-one person-years and $1,356,000 will be used for the Management of Toxic Chemicals Program in 1985-86 (see page 4-25);
- As announced by the Minister of Finance in the November Economic Statement, the level of cost recovery from fees charged for services will be increased by approximately $25,000,000 for 1985-86. (see page 4-48).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Research and Advisory Services	**46,542**	26,678	19,864	4-16
Inspection and Protection of Crops, Livestock and Farm Input Supplies	**66,948**	58,901	8,047	4-22
Market Maintenance	**44,018**	41,528	2,490	4-27
Inspection and Control of Facilities and Food Products	**62,906**	59,644	3,262	4-31
Management and Administration	**24,319**	21,308	3,011	4-36
Race Track Supervision	**13,206**	12,107	1,099	
Less Revenue credited to the Vote	**13,206**	12,690	516	
Race Track Supervision	**-**	(583)	583	4-38
Total	**244,733**	207,476	37,257	
Authorized person-years	**4,441**	4,309	132	

The increase of $37 million in requested resources for 1985-86 is made up of the following major changes:

- items identified as a result of a review of operations requested by Treasury Board: $7 million;
- allowance for inflation: $8 million;
- additional capital requirements: $22 million;
- net increase in contributions: $2 million; and
- decrease in overtime base: $2 million.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $207.5 million or $8.3 million lower than the 1984-85 Main Estimates of $215.8 million (Extracts from Part II of the Estimates, page 4-4). The difference of $8.3 million reflects the following major offsetting items:

	$ millions
• Supplementary Estimates Items	
Management of Toxic Chemical Program	1.8
Capital Equipment Replacement Plan	1.7
Export Development of Agricultural Products	.5
• Transfer to Administration Program - Common Services	(.6)
• Major Capital Construction - Changes in Cash Flow	(4.0)
• Lapses in Salaries - Overtime	(1.0)
• Contributions	
Change in Cash Flow; Construction of Veterinary Science Teaching Facility at Charlottetown, P.E.I.	(6.0)
Decrease in Payments; Compensation for Animals Slaughtered	(.7)

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: Gross Expenditures by Object (Percentage Distribution) 1985-86

B. Recent Performance

1. Highlights

In 1983-84, the planned results of the Agri-Food Regulation and Inspection Program were attained; the following additional achievements are notable:

- An agreement was signed with the four Atlantic Provinces to contribute 50% ($18.25 million) for the design and construction of an Atlantic Veterinary College at Charlottetown, with construction to start by fall 1984. Also, an initial $100,000 (of $250,000) was given to the University of Guelph toward the planning of updated veterinary training facilities.

- Two seed potato certification laboratories were opened at Charlottetown and Fredericton, at a cost of over $500,000; these will facilitate seed potato exports.

- A foot and mouth vaccine bank has been jointly established by Mexico, the United States and Canada to assure North American preparedness against an outbreak of the disease. Also, to support efforts against imported animal diseases, a $570,000 quarantine station was opened at Mirabel.

- An outbreak of anaplasmosis in July 1983, along the Saskatchewan/U.S. border, led to the testing of approximately 29,000 cattle. Fifteen hundred animals had to be slaughtered, with $1,000,000 in compensation paid to owners. Surveillance testing in southern Saskatchewan, Alberta and Manitoba indicates that the disease was sucessfully confined, avoiding major losses to the Canadian livestock industry and protecting our international trading status.

2. Review of Financial Performance

Figure 4: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Research and Advisory Services	20,789	28,285	(7,496)
Inspection and Protection of Crops, Livestock and Farm Input Supplies	55,886	57,264	(1,378)
Market Maintenance	38,390	37,862	528
Inspection and Control of Facilities and Food Products	57,030	59,213	(2,183)
Management and Administration	17,808	15,753	2,055
Race Track Supervision Revolving Fund	(1,177)	(889)	(288)
	188,726	197,488	(8,762)
Revenue	7,036	7,728	(692)

Explanation of change: See under the individual Activity Financial Performance.

C. Background

1. Introduction

The Agri-Food Regulation and Inspection Program fulfills the federal government's responsibility to protect the food and agricultural sector of the economy. It serves producers, processors, distributors, wholesalers and consumers.

Jurisdiction over the agri-food sector is shared among the Department, provincial governments and other federal departments such as Health and Welfare Canada and Consumer and Corporate Affairs Canada. In addition, there is close cooperation with universities and with national and international agricultural associations.

The major concerns of the Program are: animal disease control/eradication, plant disease control/eradication, farm input assurance, food quality assurance, food safety and race track supervision.

2. Legal Mandate

The Department of Agriculture Act constitutes the legislative authority of the Minister to control and direct agriculture. Other principal acts which govern the activities of the Agri-Food Regulation and Inspection Program are: the Meat Inspection Act, the Animal Disease and Protection Act, the Pest Control Products Act, the Plant Quarantine Act, the Pesticide Residue Act, the Canada Agricultural Products Standards Act and Section 188 of the Criminal Code with respect to race track supervision. This body of legislation, as well as the various other acts and regulations administered by the Program, is listed on page 4-50 in Section III.

3. Program Objective

The objective of the Agri-Food Regulation and Inspection Program is "to ensure the continued supply of safe, high quality, nutritious food for the domestic and export trade."

To protect the marketability of agricultural, food and forest products, the Agri-Food Regulation and Inspection Program supports the ongoing processes of marketing within established trade channels, ensures equity at each level of the food system, and provides a strategic basis for future market development. The Program is based on an essential relationship between industry and the federal government: while industry is ultimately responsible for the health, safety and the quality aspects of their products, the federal government is charged with setting and enforcing the relevant norms to protect the supply base, facilitate national and international trade and market development, and safeguard human health through Disease Control and Food Safety programs.

4. Program Organization for Delivery

Activity Structure: The Program is divided into five major activities which reflect the focus of the Program, and allow it to meet its stated objective. In addition, the Race Track Supervision Revolving Fund is managed. Each activity is subdivided to further define the objectives and operation of the Program. Figure 5 illustrates the activity structure.

Figure 5: Activity Structure

Organization Structure: The activities of the Program are administered through six directorates, plus the Race Track and Compliance Divisions.

The operations of the Program are delivered through program divisions at headquarters, regional offices and a series of laboratories strategically located across Canada. These are set out in Figure 38 on page 4-52.

The relationship between the departmental organization and the previously described activity structure, together with a breakdown of 1985-86 resources, is shown in Figure 6.

D. Planning Perspective and Performance Review

1. Environment

The Canadian agricultural food system is a mainstay of the nation's economy, accounting for approximately 10% of gross domestic product and approximately 13% of direct total employment.

The agri-food sector has demonstrated stable growth over the past five years, while most other primary resource and manufacturing industries have shown a decrease, both in dollar value and percentage of domestic product.

The agri-food sector is oriented to the market, and is a major contributor to Canada's trade balance; in 1982, agricultural trade represented 11.5% of total exports and 8% of total imports, resulting in a favourable dollar differential of 4.25 billion dollars or 25% of Canada's total trade balance of merchandise exports.

The strategic environment for the agri-food sector's performance is complex and competitive. At the domestic level, the sector must deal with consumer demand for inexpensive yet high-quality foods, increasing concerns by consumers over the use and presence of toxic chemicals in the food supply, fluctuations in demand due to recessional pressures, and aggressive efforts by foreign countries to capture domestic market shares.

At the production level, the sector must deal with problems which exceed the capabilities of individuals, companies, or even the provinces to resolve. Rail transportation, water and soil management, production research, the provision of credit, the alleviation of the effects of weather hazards and market fluctuations, and the control of animal and plant pests and diseases are but a few examples.

At the international level, the sector must cope with tariff and non-tariff trade barriers, the extreme diversity of product certification requirements of importing countries, the alignment of trading blocks, subsidy policies of foreign governments, the conflict between agri-business and third world food needs, the impact of multinationals on small or family farms, and the politics of international marketing.

Despite these and other factors, the agri-food sector has demonstrated stability and growth, due in part to the cooperative efforts of industry and government, and their respective leaders.

The future outlook for agricultural and food production and trade is positive. World demand for food is expected to increase at a faster rate than that of population growth over the next 20 years. Several federal thrusts including the Agri-Food Strategy,

the Western Transportation Initiative and the Economic and Regional Development Agency will contribute to strengthening Canada's productive capacity to exploit these future opportunities. The regulatory function of Agriculture Canada will play a central role.

Both domestic and foreign market access will depend on the health, safety and quality of agricultural, food and forest products. Canadian manufacturing processes, individual products, inspection and regulatory programs, and product certification practices are all subject to evaluation and acceptance by foreign authorities. An inability to meet foreign evaluation and acceptance criteria is often a major obstacle to trade. Assisted by climate and geography, Canada has developed world-class regulatory and inspection programs that provide an infrastructure for the facilitation of Canadian agricultural marketing on a global scale. This applies to production inputs such as feed, seed, pesticides, fertilizer, livestock, plant and forest products, and manufactured products such as meat, poultry, dairy, fruits, vegetables, and lumber.

The essential nature of the Agri-Food Regulation and Inspection Program is to assist Canada to remain competitive and exploit its full production and trade potential.

2. Initiatives

There are no major initiatives planned for fiscal year 1985-86.

3 . Update on Previously Reported Initiatives

There were no new initiatives reported in 1983-84.

4. Program Effectiveness

The success of the Agri-Food Regulation and Inspection Program in meeting its stated objective ("to ensure the continued supply of safe, high-quality, nutritious food for the domestic and export trade") is indicated by overall consumer and producer confidence in the Canadian food system. Canada enjoys one of the safest food systems in the world, and consumers are assured of a continuous supply of wholesome products that meet the exacting standards developed by the Program.

The maintenance and growth of Canadian export markets is facilitated by ensuring the superior health and quality of Canadian livestock and crops, and by the priority given to the mandatory inspection of agricultural exports. Figure 7 shows the value of agricultural exports, by principal commodity group, from 1974 to 1983. Figure 8 shows how agricultural exports have risen steadily since 1968.

Figure 7:

Figure 8:

Although the importance of economic and political forces in defining trade volumes is acknowledged, it must also be recognized that without Canada's rigorous inspection regime, it would be very difficult to maintain our access to many highly restrictive foreign markets. Various elements of the Agri-Food Regulation and Inspection Program have direct impact on exports in all commodity groups. A comprehensive evaluation of all programs involved in market maintenance is continuing, with results expected early in fiscal year 1985-86. In addition, the evaluation of the Inspection and Protection of Crops and Farm Input Supplies component, which will review the department's activities in plant health, feed, seed, fertilizer and pesticides is underway.

Section II
Analysis by Activity

A. Research and Advisory Services

Objective

To ensure that the farm animal population is unencumbered by disease.

Resource Summary

Expenditures for the Research and Advisory Services Activity account for approximately 19% of total 1985-86 Agri-Food Regulation and Inspection Program expenditures and 9% of total person-years.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Veterinary Research	9,783	120	6,218	120	6,003	122
Laboratory Services	34,784	252	19,183	249	13,517	244
Health and Management	1,975	27	1,277	28	1,269	29
	46,542	399	26,678	397	20,789	395
Revenue	816		789		853	

Approximately $19 million (39%) is required to support personnel and other operating costs of the activity.

Revenue of approximately $816 thousand is generated through blood typing services to producers and from the sale of livestock and poultry. Revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 10 summarizes the changes in financial requirements that occurred in 1983-84.

Figure 10: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Veterinary Research	6,003	8,788	(2,785)
Laboratory Services	13,517	18,304	(4,787)
Health and Management	1,269	1,193	76
	20,789	28,285	(7,496)
Revenue	853	844	9

Explanation of Change: Changes in the cash flow for Major Construction Projects created a lapse of approximately $8 million as follows:

- Sackville Laboratory $1.9 million
- St-Hyacinthe Laboratory $(.4) million
- Guelph Laboratory $3.2 million
- Lethbridge Laboratory $2.7 million
- Isolation Barn, Lethbridge $.6 million

Description

Research and Advisory Services activities contribute to the maintenance and improvement of the health of Canadian farm livestock, and the protection of human health. Activities are grouped into three areas.

Veterinary Research: Research projects are conducted to improve the speed and accuracy of laboratory diagnosis of animal diseases, to improve methods for testing meat and poultry products for chemical and biological contaminants, to devise methods for disease control or eradication, and to increase knowledge about animal diseases of national economic or human health importance. A major objective is to support the Disease Control Program in screening imports of animals and animal products to prevent the entry of foreign animal diseases or, should a disease gain entry to Canada, to facilitate a rapid diagnosis and identification of infected animals.

Laboratory Diagnostic Services: Scientists perform and evaluate tests for meat safety, for diseases exotic to Canada, and for significant domestic livestock diseases. Included are tests for health certification (to promote exports) and to minimize the risk of disease introduction through imports of animals and animal products. Biological reagents required for animal disease testing are produced and/or tested for safety and potency. A blood typing service is offered to Canadian cattle and horse owners.

Health and Management: Registration and inspection of poultry hatcheries ensures that they maintain sanitary operating conditions and produce healthy chicks and poults. Tests are conducted to demonstrate the genetic merit of various strains of poultry stock to the poultry industry.

Performance Information/Resource Justification

Veterinary Research: In 1985-86, a total of $10 million in operating and capital costs and 120 person-years will be used for veterinary research, including research on foreign animal diseases, indigenous diseases for which Canada has national control programs, and diseases which are of economic significance to Canadian livestock production. Research will also be conducted on meat safety testing methods. This research supports the Animal Disease Control Program (Inspection and Protection of Crops, Livestock, and Farm Input Supply Activity) and the National Inspection Program (Inspection and Control of Facilities and Food Products Activity). Figure 11 identifies the projects to be undertaken in 1985-86.

In 1983-84, the Veterinary Research Program was conducted according to plan. As a result, knowledge about a number of animal diseases (and their diagnosis) was increased. This will facilitate disease control and eradication programs designed to improve the overall health of Canadian livestock, contribute to the acceptance of Canadian livestock in export markets, and reduce disease transmission from animals to humans.

Figure 11: Veterinary Research Projects, 1985-86

Research Area	General Objective	Projects for 1985-86
1. Foreign Animal Diseases	Prevent entry and ensure rapid diagnosis to control foreign diseases threatening livestock production and exports.	Evaluate embryo transfer for the conservation of genetic stocks from animals infected with foreign animal diseases.
		Develop methods for the diagnosis of pseudorabies in swine, using enzyme-linked immunoassay (ELISA).
2. Cattle Diseases	Increase knowledge and methods for the prevention, diagnosis, control or eradication of diseases of cattle.	Demonstrate feasibility of maintaining closed herds free of infectious bovine rhinotracheitis.
		Demonstrate feasibility of eradicating bovine viral diarrhea.
		Select strains of bacteria causing foot-rot for vaccine production.
		Prepare and test purified antigenic reagents for sensitivity and specificity in ELISA test for Johne's disease.
		Employ monoclonal antibodies in a refined test for brucellosis.
		Develop and test vaccine for Pasteurella haemolytica in bovine pneumonia.
		Determine role of hypothermia in neonatal mortality.
		Determine effects on fertility of microbial contaminants of semen.
		Develop a vaccine for salmonellosis in calves.
		Develop methods for automated on-farm disease reporting.
3. Poultry Diseases	Increase knowledge of poultry diseases to maintain productivity and facilitate exports.	Determine efficacy of Marek's disease vaccine, delivered as an aerosol.
		Determine effects of leukosis on poultry health and production.
4. Swine Diseases	Facilitate production and exports by improving control of swine diseases.	Determine relationship of umbilical cord strength to asphyxia at birth.
		Develop ELISA test for diagnosis and export certification of transmissible gastroenteritis.
5. Sheep Diseases	Increase knowledge of diseases of sheep in Canada, including the means of treatment and control.	Characterize the causative agent of scrapie.
		Develop methods to reduce economic loss to the sheep industry through respiratory disease.
6. Horses and Other Species	Improve information on diseases and disease control strategies.	Develop an oral vaccine for rabies in wild animals.
		Develop a strategy for eradicating brucellosis from manageable wildlife (eg: in National Parks)
7. Meat Safety	To develop tests for biological and chemical contaminants to ensure the safety of meat and meat products for domestic use and export.	Develop tests to distinguish sheep and goat meat.
		Develop tests for the identification of organic and inorganic arsenic residues in meat.

Laboratory Diagnostic Services: In 1985-86, $35 million and 252 person-years will be required for laboratory diagnostic services. The resources required to provide laboratory testing for disease control programs are determined by the level of foreign trade, livestock population and distribution, level of surveillance required and the requirements of provincial laboratories and private practitioners for tests. Resources required for meat safety testing are determined by the size of meat sampling programs under the National Inspection Service. Figure 12 provides the numbers of various tests conducted and the associated person year consumption.

In 1983-84, laboratory services were generally delivered as planned, with deviations (positive and negative) due primarily to unforeseeable events. For example, the requirement for nearly 32,000 tests in connection with an outbreak of anaplasmosis necessitated the allocation of technicians from other programs.

Figure 12: Tests Conducted by Laboratory Diagnostic Services

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	P-Y	**No. of Tests**	P-Y	No. of Tests	P-Y	No. of Tests
Foreign Animal Diseases	**20**	**79,500**	25	36,600	27	34,663
Brucellosis	**52**	**1,861,900**	52	1,650,000	53	1,605,183
Tuberculosis	**3**	**1,500**	3	1,400	5	1,342
Meat Safety	**52**	**23,300**	52	16,800	48	13,980
Reportable and Other Diseases of National Concern	**27**	**126,800**	24	130,000	23	128,324
Export	**43**	**257,000**	40	230,000	36	216,293
Import	**8**	**27,700**	7	20,000	7	14,565
Artificial Insemination	**8**	**69,700**	12	65,000	13	74,544
Support Services	**30**	**82,900**	23	50,000	22	47,325
Biologics Production (Test Doses)	**9**	**3,070,500**	11	3,300,000	10	3,291,004
Total	**252**		249		244	

Health and Management: In 1985-86, approximately 27 person-years and $2 million in operating and capital funds will be required to carry out hatchery inspections and to operate the Central Poultry Test Station.

Canadian hatcheries annually produce 375 million birds, valued at approximately $160 million. Samples of debris are taken every six weeks from each hatchery and subjected to laboratory testing. Production statistics are verified, and provide an essential part of the supply management system used by both hatchery managements and the marketing boards.

Poultry performance testing is conducted at the Central Poultry Test Station to provide producers with an unbiased measurement of the economic characteristics of egg stocks, broiler stocks and roaster stocks sold on the Canadian market. These test results have been published to allow the poultry industry to select superior breeding stock, thereby improving production efficiency and the quality of poultry sold to producers.

Each hatchery is inspected for compliance with well-defined and stringent standards, and is assigned a rating (A, B, C, D or F) which indicates overall sanitation. Hatcheries not meeting minimum standards are visited more frequently and given advice or guidance on how to bring the hatchery up to standard. The effectiveness of the hatchery inspection program can be measured by the number of hatcheries receiving an A (excellent), B (good) or C (fair) rating. In 1983-84, 80% of hatcheries in Canada had a rating of A, B or C based on the hatchery sanitation level; 92% of chicks and poults produced were from hatcheries scoring A, B or C.

B. Inspection and Protection of Crops, Livestock and Farm Input Supplies

Objective

To ensure the protection of the animals and plants necessary for food and agricultural production, and to ensure the availability and quality of basic inputs (feed, seed, fertilizers, pesticides) for this production.

Resource Summary

The Inspection and Protection of Crops, Livestock and Farm Input Supplies Activity accounts for approximately 27% of total 1985-86 Agri-Food Regulation and Inspection Program expenditures and 29% of total person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Disease Control	34,709	591	31,503	591	31,933	596
Plant Protection	9,599	233	8,237	168	7,506	170
Input Assurance and Scientific Analysis	22,640	411	19,161	381	16,447	365
	66,948	1,235	58,901	1,140	55,886	1,131
Revenue	9,248		1,595		1,673	

Approximately 90% of the resources are required to support personnel and other operating costs of the Activity. Revenue is generated from services provided to producers and credited directly to the Consolidated Revenue Fund. It is not available for use by the Program.

Past Financial Performance

Figure 14 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 14: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Disease Control	31,933	35,918	(3,985)
Plant Protection	7,506	6,653	853
Input Assurance and Scientific Analysis	16,447	14,693	1,754
	55,886	57,264	(1,378)
Revenue	1,673	1,604	69

Explanation of Change: Changes in the cash flow for Major Construction Projects created a lapse of approximately $1.5 million as follows:

- Calgary Laboratory $.6 million
- Windsor, Port of Entry $.3 million
- Queenston, Port of Entry $.6 million

Description

This Activity ensures a reliable supply of farm inputs, including animals, plants, feed, seed, fertilizers and pesticides, and has three elements.

Disease Control: The objective of this element is to maintain a healthy Canadian livestock and poultry population to permit and enhance domestic and international trade in livestock, poultry, meat and other animal products. This is accomplished by detecting, diagnosing and eradicating outbreaks of foreign animal diseases such as foot and mouth, and indigenous diseases such as brucellosis and tuberculosis. It also diagnoses and controls other diseases which endanger human health, such as rabies and salmonellosis, and controls the importation and domestic use of semen, embryos and biologics to ensure livestock diseases are not transmitted through their use. Extensive controls are maintained over the importation of animals and animal products to prevent the entry of serious diseases, by inspecting animals at ports of entry, by quarantining animals at six federally maintained quarantine stations (or suitable private premises), by controlling the disposal of garbage of foreign origin and, in conjunction with Customs and Excise Canada, by inspecting baggage and questioning persons at port of entry. There is also a responsiblity for the humane treatment of animals during their transportation.

Plant Protection: The objective of this element is to protect and improve the health of our agricultural and forestry heritage for the benefit of man and the environment. This is accomplished through international cooperation and domestic action to prevent the introduction of exotic pests (diseases, insects, weeds and other dangerous items associated with plants), to control or eradicate exotic diseases, to provide phytosanitary certification for exports, and to control the domestic movement of plant materials and products which might carry disease or pests. Scientific support functions include pest identification, pest surveys and post-entry quarantines.

Input Assurance and Scientific Analysis: This element ensures the availability of an adequate supply of accurately represented quality seed, by inspecting pedigree seed, testing samples, and grading, tagging and sealing seed lots. It also ensures that pest control products sold in Canada are effective and safe, with clear and complete information on product uses, by regulating, inspecting and testing products to ensure that they comply with composition and quality regulations, and are adequately packaged and labeled. In addition, it ensures that livestock feeds are effective, free from substances harmful to livestock and humans and truthfully represented as to nutritional content, by inspecting and testing livestock feeds for composition, quality and contaminants. Finally, it ensures that fertilizers sold or imported into Canada are efficacious, free from substances harmful to livestock, crops or humans, accurately labeled and represented with respect to nutrient content, by regulating, inspecting and testing fertilizers for composition and quality. All of these activities require extensive laboratory support in the scientific analysis of samples.

Performance Information/Resource Justification

Disease Control: In 1985-86, 591 person-years and $25 million will be required to maintain and improve the disease control program.

Disease control activities are conducted across the country from 117 Veterinary Inspection district offices, 112 ports of entry, and approximately 400 livestock markets and abattoirs, and include a variable mix of surveillance, prevention, eradication, control and certification functions.

All operational objectives were met in 1983-84, including the following notable achievements:

- Through simulation exercises, regional alert teams assured their preparedness to handle disease outbreaks quickly and efficiently.

- Brucellosis, tuberculosis and pullorum-typhoid were kept under control. The first two diseases are on schedule for eradication by 1986-87 and 1985-86, respectively, and commercial poultry flocks remain free of pullorum-typhoid.

- The import program has ensured that no major foreign disease entered Canada in 1983-84 via imports, thus protecting the country's favoured status in international trade.

Plant Protection: In 1985-86, the plant protection activity will require 233 person-years and $10 million for domestic, import, export, and quarantine activities.

In 1985-86 work will continue on a four-year "Protection of Marketability" project, the purpose of which is to ensure access of Canadian plants and plant products to foreign markets by resolving foreign regulatory problems through negotiation. A major component is the development of a reference system of international import regulations, and data on plant product exports.

In 1983-84, the planned program activities were successfully conducted. There were 1,485 interceptions of significant pest organisms.

From 1981-82 to 1983-84, several trends became evident and are expected to continue. The number of export certificates issued has increased over the period at an average rate of 11% per year, while the number of import inspections has been increasing at an average of 5% per year. Not only is there a tendency for the volume of work to increase, but also the complexity is increasing.

Input Assurance and Scientific Analysis: In 1985-86, the Input Assurance and Scientific Analysis Activity will require 438 person-years and $24 million. These resources will support program management, field operations and laboratory support for Seed, Pesticide, Feed and Fertilizer activities.

The 1985-86 resource needs for the seed activity will be 222 person-years and $12 million. This program is highly demand-driven, and the exact needs for resources is often difficult to predict. For example, in 1983-84 the record pedigree seed crop yield caused an unusually high demand for grading, tagging and sealing services, which had to be met partly by reducing monitoring functions from planned levels.

A total of 123 person-years and $8 million will be devoted to delivery of pesticides activities. These person-years are to be used for evaluating and registering new pesticide products and uses, for the provision of advice and information on pest control products (over 100,000 information requests each year), and for field and laboratory work to regulate 5,400 products marketed by 550 companies. The Management of Toxic Chemicals Program will include the development and implementation of modern analytical and registration standards and test methodologies, re-evaluation of older existing pesticides and the implementation of improved information processing systems and communications with the public. An Information Secretariat (to collect and widely disseminate information on pesticides) and a Pest Management Advisory Board (to recommend on policy and special issues) will be implemented.

Approximately 44 person-years and $2 million will be used in 1985-86 for feed activities, at feed mills and on the farm. Approximately 7,450 mixed, specialty or single-ingredient feeds will be evaluated and registered. As well, feed samples will be obtained for contaminant monitoring in response to greater concern about feed contamination involving drug residues, pesticides, and biological contaminants such as salmonella and mycotoxins. More samples will be obtained to monitor adherance to compositional and labeling standards (Studies have indicated a 30% rate of noncompliance to regulatory standards). Veterinary prescriptions are also monitored to obtain indications for potential feed and/or livestock product contamination.

A total of 22 person-years and $1 million will be required for fertilizer activities. Because of the high rate of noncompliance with standards (25%), inspection emphasis is on product quality. Some 60-70% of manufacturing establishments will be inspected and samples taken for analysis of product quality and adherance to label guarantees. Additional samples will be analyzed for contamination (e.g., pesticides). There will be a continuing trend for growth in the number of inspection points requiring attention because of increasing fertilizer usage.

Figure 15 relates the volume of laboratory testing which will be required in support of the Input Assurance activities, plus the associated PY's (included in the 438 PY total).

Figure 15: 1985-86 Laboratory Testing Services Required - Scientific Analysis

Program	Required Person-Years	Number of Samples (Estimate)
Seed	28	5000
Feed	41	9300
Pesticide	25	1000
Fertilizer	8	3700
Total	102	19000

It is important to note that the number of separate test procedures per sample varies considerably, from three per sample for feed samples to as many as 12 for some pesticide samples. The complexity of the individual tests also varies greatly.

C. Market Maintenance

Objective

To assist in the maintenance of existing national and international markets for Canadian agricultural products.

Resource Summary

Expenditures of the Market Maintenance Activity account for approximately 18% of total 1985-86 Agri-Food Regulation and Inspection Program expenditures and 22% of total person-years.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Export Testing and Export Meat Products	13,139	303	12,186	295	11,615	281
Quality Assurance	4,488	97	4,040	97	3,649	88
Monitoring of Grade Standards	19,646	438	19,227	438	17,431	456

	44,018	984	41,528	976	38,390	974
Revenue	8,359		554		740	

Approximately 97% of the resources are required to support personnel costs and other operating costs of the activity.

Past Financial Performance

Figure 17 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 17: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Export Testing and Export Meat Products	11,615	11,165	450
Quality Assurance	3,649	4,578	(929)
Monitoring of Grade Standards	17,431	16,100	1,331
Grading	5,695	6,019	(324)
	38,390	37,862	528
Revenue	740	619	121

Description

The Market Maintenance Activity supports the maintenance of existing national and international markets. The activity has five elements:

Export Testing: This element maintains and enhances the status of Canadian livestock on the international market by ensuring that qualified animals are exported, consistent with the standards of disease freedom required by the importing country.

Export Meat Products: This element inspects, tests and certifies meat and meat products, animals and animal by-products for export. Negotiations are also carried out with foreign governments to ensure that their import requirements do not represent non-tariff trade barriers.

Quality Assurance: This element inspects seed potatoes to ensure a high quality product for domestic and export markets, with the support of two potato laboratories and field testing programs. Diagnostic tests identify any disease present, while indexing tests identify the extent of the disease. Liaison is maintained with the provinces and industry regarding the multiplication and storage of seed potatoes.

Monitoring of Grade Standards: This element ensures compliance with grade and composition standards for domestic and imported agricultural products; that foods are safe and accurately labeled; that exported agricultural food products comply with foreign country regulations; that laboratory support for the regulatory programs is accurate, authoritative and timely; that the dairy, poultry, and processed and fresh fruit and vegetable industries follow fair and orderly trading practices; and that quality produce enters the market.

Grading: This element ensures that the national grading system maintains a uniform national standard and constitutes a satisfactory basis for the marketing of livestock carcasses. The grade assigned to hog and beef carcasses serves as a producer settlement mechanism for all hog carcasses and 45% of beef carcasses. Livestock market information is collected at stockyards and meat packing establishments for publication.

Performance Information/Resource Justification

Export Testing: In 1985-86, 88 person-years and $3 million in operating and capital costs will be needed to provide export testing services. Inspection, testing and certification procedures for all animals and animal products being exported reflect importing country requirements, which vary for each country and animal species.

Export Meat Products: The export meat products function is an integral part of National Inspection Services and has been included in that activity. Approximately $10 million and 215 person-years will be needed in 1985 for Export Meat Products Services.

Quality Assurance: Approximately $4 million and 97 person-years will be required to inspect, grade and test seed potatoes in 1985-86. Up to 40,000 hectares of crop requires inspection each year, and inspections may require up to three visits. Post-harvest and post-cleaning reinspections are also required prior to the grading, tagging and sealing of individual seed bags.

Monitoring of Grade Standards: In 1985-86, $20 million and 438 person-years will be engaged in testing, inspection and certification of agricultural food products. Figure 18 shows the estimated annual volumes of some types of produce, and the person-years required for their inspection.

Figure 18: Inspection Volumes for Grade Standards Monitoring

Commodity		1985-86 Estimated Volumes	Person-Years
Eggs	- import/export	20.0 million dozen	88
	- domestic	420.0 million dozen	
Poultry	- import/export	8.5 million kilograms	
	- domestic	165.0 million head	
Processed eggs	- import/export	3.1 million kilograms	
	- domestic	32.0 million kilograms	
Fruit and vegetables - fresh (dom.)		4.0 billion kilograms	215
Fruit and vegetables - processed (dom.)		1.5 billion kilograms	40
Dairy products (domestic)		120.0 million kilograms	83
Evaporated milk (domestic)		140.0 million litres	

The effectiveness of grade standards monitoring is measured by the rate of compliance with standards. Higher compliance levels will result in a lesser intensity of monitoring, and (to a degree) less resource needs. Target compliance rate is 95%. In 1983-84, the compliance rate for Canada Grade A chicken improved from 81% in the first quarter to approximately 89% in the last two quarters. The compliance rate for turkeys improved from 92% to 93%, with most defects now limited to packaging problems.

Grading: $7 million in operating and capital costs and 146 person-years will be required to respond to industry demands for grading. The number of packing plants in operation, their size and distance from one another, speed of the slaughtering operation and the total annual slaughter combine to dictate the resources required. Figure 19 shows projected grading volumes, the primary factor in calculating resource requirements.

Figure 19: Grading Volumes by Species (Thousands of Carcasses)

	1985-86 Estimate	1984-85 Forecast	1983-84 Actual
Beef	3,300	3,000	3,240
Hogs	13,000	12,500	12,700
Veal	75	50	25
Lamb and Mutton	20	20	20

The industry's extensive use of the voluntary grading service is an indication of its success in meeting their needs. Almost 100% of hogs slaughtered in Canada are now sold on the basis of federal grading, and all beef carcasses are federally graded except those destined for processing. The linkage of the grading system to the marketing process has increased the proportion of leaner, more desirable carcasses.

Effectiveness is determined by monitoring the accuracy of grade application by the graders. In 1983-84, the national accuracy ratings were 97% for beef, 96% for hogs, 92% for veal, and 95% for lamb and mutton. Beef and hogs, in particular, were above target levels of grade application by graders.

D. Inspection and Control of Facilities and Food Products

Objective

To ensure the safety, quality and nutritive value of edible agricultural products.

Resource Summary

Expenditures for the Inspection and Control of Facilities and Food Products Activity account for approximately 26% of total 1985-86 Agri-Food Regulation and Inspection Program expenditures and 32% of total person-years.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
National Inspection Services	58,765	1,312	55,936	1,285	53,648	1,298
Plant Registration and Inspection	2,727	37	2,438	37	2,033	48
Scientific Analysis	1,414	49	1,270	49	1,349	34
	62,906	1,398	59,644	1,371	57,030	1,380
Revenue	13,920		4,157		3,770	

Approximately 99% of the resources is required to support personnel costs and other operating costs of the activity.

Revenue is derived from the provision of meat inspection overtime services to meat packing establishments, and inspection services to provincially licensed meat packers. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 21 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 21: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
National Inspection Services	53,648	55,292	(1,644)
Plant Registration and Inspection	2,033	2,212	(179)
Scientific Analysis	1,349	1,709	(360)
	57,030	59,213	(2,183)
Revenue	3,770	4,661	(891)

Explanation of Change: The lapse of $2.2 million is due to a reduction in overtime charges created by the introduction of staggered work shifts in meat slaughter plants and the introduction of a statistical sampling plan in meat processing plants.

Description

The Inspection and Control of Facilities and Food Products Activity has three elements.

National Inspection Services: This element includes the National (Meat) Inspection Service, as well as Import, Foreign and Federal/Provincial Inspection Programs. All animals are inspected before and after slaughter, while site inspection and monitoring ensures that the environment in which meat products are produced, stored and transported meets legislated requirements in regard to construction, sanitation, operation and hygiene. These programs are essential to maintain our export markets, ensure adequate supplies of safe, unadulterated meat products, and provide service to the industry, without limiting its ability to produce and compete in the agricultural marketplace. A meat inspection service is provided on a cost recovery basis to some provinces, under federal/provincial agreement, in meat plants which would not otherwise fall under federal inspection (i.e., where meat and meat products do not move into intraprovincial trade). Meat inspection systems of countries exporting meat products to Canada are evaluated to ensure that Canadian standards are met.

Plant Registration and Inspection: This element ensures compliance with regulations governing operations, sanitation and hygiene standards in food processing plants. Physical inspections are conducted on domestic dairy, poultry, egg, honey, maple, and processed fruit and vegetable plants registered with the Department.

Scientific Analysis: This element provides timely and reliable composition, chemical and microbiological testing services in support of food product inspections (including meat, dairy, fruit, vegetable and poultry product samples) to ensure that the products comply with federal standards for safety, quality and composition for domestic and export markets.

Performance Information/Resource Justification

National Inspection Services: Some 1,312 person-years and $ 59 million will be required in 1985-86 to deliver national inspection services. In slaughter plants, person-year requirements are determined on the basis of the number of defined inspection stations: post-mortem stations require 100% inspectional presence. A system has also been developed for calculating the resource needs in processing plants which takes into account the type of operation (simple, complex or critical), compliance record (excellent, good, average, or poor), plant size and volume of throughput.

In 1983-84, the National Meat Inspection Program provided service to 824 registered establishments and 24 approved rendering plants, as planned.

The program, by ensuring the high quality of Canadian meat is maintained, assisted industry to export a record 306 million kilograms of meat products valued at over a billion dollars in 1983-84.

A measure of effectiveness for the National Meat Inspection Program is the rating assigned to registered establishments. All establishments receiving meat inspection services are rated A, B, C, D or F according to comprehensive national audit criteria. At the beginning of 1983, 86% of establishments had satisfactory ratings of A, B, or C; at year end, 93% had A, B, or C ratings.

Another indicator of effectiveness is the number of establishment "delistings" by U.S. inspectors. At least once each two years, and as often as every three months, establishments shipping meat to the U.S. are inspected by the U.S.D.A; those not meeting U.S. standards are delisted (barred from exporting to the U.S.) until standards are met. Agriculture Canada similarly audits U.S. plants shipping to Canada. In calendar 1983, eight (1.5%) of 533 Canadian establishments were delisted but were relisted by year-end. During the same period, 22% of U.S. establishments audited by Canada were delisted.

Higher operating speeds and new technologies require the continuous review and modification of inspection procedures to maintain an acceptable level of service without jeopardizing industrial production. Every effort is being made to improve efficiency by encouraging plant managements to institute industry-operated quality controls for better compliance to regulations, always under close monitoring by departmental staff.

Plant Registration and Inspection: Some 37 person-years and $3 million will be required in 1985-86 for plant registration and inspection.

Plants are rated (A, B, C, D, F) to establish their degree of compliance with regulations, and to help maximize the use of program resources through appropriate allocations to priority plants. A FOIL (Frequency of Inspection Level) system is used to determine the frequency of inspection for the various types of food processing plants.

Program effectiveness is indicated by the proportion of plants which have a satisfactory A, B, or C rating. Some examples are shown in Figure 22.

Figure 22: Effectiveness of Plant Registration and Inspection

Type of Plant	Number of Plants	% Rated A,B, or C
Processed egg	13	40%*
Shell egg	246	82%
Processed fruit & vegetable		
- low acid	59	76%
- other	339	96%
Dairy	378	89%
Poultry	42	79%

*A large proportion of plants are in the process of major renovations to meet regulations.

Scientific Analysis: A total of $1 million and 49 person-years will be required for scientific analysis in 1985-86. Approximately 87% of resources are devoted to providing timely and accurate analytical results, and to support research to improve effectiveness and efficiency. The remaining 13% is required for administrative support, training and development and quality control activities. The 1985-86 workload estimates and associated person-year requirements are charted in Figure 23.

Person-year needs are dictated by inspection program requirements for analyses, based in turn on industry production and import-export volumes. The number and complexity of tests for each sample must be taken into consideration. The trend has been to shift from simple testing for labeling requirements (compositions) to complex and time-consuming testing for drug and pesticide residues or other contaminants that impact on safety and health. Some of the simpler testing is being diverted to accredited laboratories, leaving a higher proportion of the more complex testing to in-house laboratory services. The capability now exists to perform approximately 450 different tests, which can vary in complexity from a one-day to a 60-day turn-around time.

Figure 23: Testing Services Required-Inspection of Food Products

Client Division	P-Y Allocation	Estimated No. of Samples 1985-86	Average No. Tests per Sample 1983-84	Estimated No. Tests 1985-86
Livestock and poultry	11	7,000	7	49,000
Meat hygiene	8	3,500	6	21,000
Dairy	11	11,000	12	132,000
Fruit and vegetable	6	4,000	5	20,000
Total	36	25,500		222,000

E. Management and Administration

Objective

To provide managerial, personnel and administrative services as required for the efficient management of the Program.

Resource Summary

Expenditures for the Management and Administration Activity account for approximately 10% of total Agri-Food Regulation and Inspection Program expenditures and 7% of total person-years.

Figure 24: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive and General Management	22,250	294	20,007	294	15,599	349
Administrative Services	1,034	16	648	16	579	10
Education and Development	777	12	486	12	1,365	13
Plant Maintenance and Equipment	258	-	167	-	265	-
	24,319	322	21,308	322	17,808	372

Approximately 67% of the resources are used for personnel and other operating costs and the balance for contributions & capital expenditures.

Past Financial Performance

Figure 25 summarizes the changes in financial requirements that occurred in 1983-84.

Figure 25: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Executive and General Management	15,599	13,344	2,255
Administrative Services	579	724	(145)
Education and Development	1,365	1,638	(273)
Plant Maintenance and Equipment	265	47	218
	17,808	15,753	2,055

Explanation of Change: The changes were a result of internal person-year shifts from other Planning Elements creating a 12 person-year over-utilization and a corresponding $1.7 million deficit for salaries and operating funds. Additional contributions were also expended as follows:

- Atlantic Veterinary College $.2 million
- Special Initiative Employment Program $.1 million
- Aid to Universities, Guelph, Ontario $.1 million

Description

The Management and Administration Activity ensures that the staff of the Agri-Food Regulation and Inspection Program possess the required knowledge, abilities and skills, including proficiency in both official languages. It also manages acts and regulations that contribute to the continued growth of the agri-food sector; plans, organizes, directs and controls resources in the most effective and efficient manner; and provides an effective communications network. The Activity consists of four elements: Executive and General Management, Administrative Services, Education and Development, and Plant Maintenance and Equipment.

Performance Information/Resource Justification

In 1985-86, 322 person-years and $24 million will be required by the Management and Administration Activity. Of this, 31% will be for contributions to professional associations ($47 thousand) and to the new veterinary teaching facility at Charlottetown, P.E.I. ($7.4 million, part of the 50% federal contribution to the capital costs).

Management and Administration resourcing in 1983-84, after removal of the cost of contributions, represented 7% of person-years and 7% of dollars spent for the Agri-Food Regulation and Inspection Program.

F. Race Track Supervision

Objective

To protect the wagering public at race tracks and to ensure a viable race track industry.

Resource Summary

The Race Track Division operates on a revolving fund basis and is intended to be self-sustaining. Revenue is raised from a levy which may vary from 0.5% to 1% of all monies wagered. For 1985-86, this levy is currently set at a rate of 0.8%.

Past Financial Performance

Figure 29 summarizes the changes in financial requirements that occurred in 1983-84.

Figure 29: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Pari-Mutuel Supervision	2,409	2,986	(577)
Race Surveillance	7,915	8,403	(488)
Surveillance Research	449	627	(178)
Administration	1,248	1,067	181
	12,021	13,083	(1,062)
Revenue	13,198	13,972	(744)

Explanation of Change: The year end surplus of $1.1 million is due to a number of factors including: delays in staffing, a lower number of racing days than originally estimated, lower volume of betting than anticipated and on under-utilization of person-years planned to implement new betting policies.

Description

Through the provision and supervision of services at race tracks, the Department endeavours to ensure that the betting public is protected. Regulations are made and enforced concerning the operation of pari-mutuel systems, the method of calculating the amount payable in respect to each dollar bet, the conduct of race meetings in relation to photo finish, race patrol and drug control, and the provision and maintenance of facilities for the operation of pari-mutuel systems. The program consists of the following four elements.

Pari-Mutuel Supervision: The establishment of minimum standards for totalizator (pari-mutuel betting) equipment, combined with testing, inspection and day-to-day supervision, ensures that pari-mutuel betting of approximately $1.7 billion annually, at about 120 tracks operating for approximately 4,600 racing days a year, is operated honestly and in accordance with regulations. All of the approximately 170,000 betting pools operated are audited for accuracy and compliance with regulations and provincial tax acts. Supervision includes investigation of regulation violations and public complaints, inspection of track facilities, and the compilation and publication of national and provincial statistics.

Race Surveillance: This element contributes to the public protection objective through the provision and supervision of contracted services including the Race Patrol Service (video coverage of the running of each race), the Photo Finish Service (photo of the finish of each race)

provided for use by race officials as well as the betting public, and the Drug Control Service which involves the collection and analysis of approximately 85,000 official samples of blood and urine from competing horses.

Surveillance Research: Research is conducted on race surveillance services, pari-mutuel betting systems and supervisory services, and on drugs with respect to their analytical detectability, excretion rates and effects on horse performance.

Administration: This element provides policy, guidelines and program direction, and supports and evaluates program delivery.

Performance Information/Resource Justification

The resources required to fulfill the objectives of the division efficiently and effectively are split between variable and fixed costs. The variable costs (approximately 65% of total resources) include race patrol, photo finish and drug control services. The Race Track Division is billed for actual racing days serviced, instead of paying a fixed cost for the year.

The race patrol and photo finish services are provided under contract. The costs are governed by the size and class of track and are negotiated through the Department of Supply and Services. The drug control service is provided by the Department through a financial reimbursement scheme to racing associations who employ department-approved test inspectors, chemists and veterinarians. The number of test inspectors on collection detail varies depending on the number of urine and blood samples scheduled to be collected. The schedule of samples is based on the size and class of track.

The fixed costs (approximately 35% of the total resources) include the salaries of 103 person-years (27%), drug research contracts (3%) and other operating costs (5%), including the operation of a small research centre at Jerseyville, Ontario.

Departmental personnel supervise approximately 4,600 races annually where pari-mutuel betting is carried out. The number of officers in attendance varies according to the class of track. Twenty-four of the 74 person-years assigned to race supervision duty are seasonal and are utilized as needed.

In 1983-84, the level of satisfactory service days (i.e., race patrol, photo finish and drug control) was maintained at 95%, and the accuracy of pari-mutuel payments to the public at a level of 99%.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The Agri-Food Regulation and Inspection Program expenditures by object are presented in Figure 30.

Figure 30: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	**150,827**	141,394	133,437

Net	**244,733**	207,476	188,726

2. Personnel Expenditures

The Program's personnel costs of $173 million account for about 86% of total operating expenditures and about 71% of total program expenditures. This includes the statutory contributions to employee benefit plans. Figure 31 provides a breakdown of personnel by activity and Figure 32 shows the person-years and average annual salary by category.

Operational					
General Labour and Trades	119	119	121	14,776 - 40,676	23,955
General Service	34	34	32	13,253 - 39,988	22,183
Other	3	2	2		30,245

Note: The person-year columns display the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 33 presents a summary by major category of the Agri-Food Regulation and Inspection Program's capital expenditures. Figure 34 provides details of major capital projects which are those having expenditures of $250,000 or more. Major capital expenditures will be made for a wide range of projects. The major user in 1985-86 is the laboratory construction component as outlined under the Research and Advisory Services Activity.

Figure 33: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Major construction	**28,327**	7,739	2,629
Minor construction	**123**	950	511
Equipment acquisition	**7,045**	5,020	4,441
	35,495	13,709	7,581

B. Cost Analysis

Net Program Cost

The Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items, as well as revenue, must also be included when considering the actual costs to operate the Program.

Figure 37: Net Cost of Program by Activity for the Year 1985-86 ($000)

	1985-86 Expendi-tures	Add Other Costs	Total Cost	Deduct Revenue	**1985-86 Net Cost**	1984-85 Forecast
Research and Advisory Services	46,542	1,253	47,795	816	**46,979**	27,195
Inspection and Protection of Crops, Livestock and Farm Input Supplies	66,948	4,035	70,983	9,248	**61,735**	61,057
Market Maintenance	44,018	3,230	47,248	8,359	**38,889**	44,184
Inspection and Control of Facilities and Food Products	62,906	4,537	67,443	13,920	**53,523**	59,996
Management and Administration	24,319	1,050	25,369	-	**25,369**	22,367
	244,733	14,105	258,838	32,343	**226,495**	214,799

The adjustments made to the estimated expenditures to arrive at a total net cost include $14.1 million for accommodation provided without charge to this Department by Public Works ($10 million), DSS common services ($.2 million), Treasury Board employer's share of insurance premiums and costs ($3 million), Department of Labour employers portion of compensation payments ($.7 million) and Transport Canada accomodation at International Airports ($.2 million).

C. Additional Information

1. Acts and Regulations Administered

As well as the Acts and Regulations identified under the Legal Mandate on page 4-11, the following are administered in whole or in part by the Program:

- Animal Disease and Protection Act 1974-75, c.86
  - Animal Disease and Protection Regulations (s.3) CRC, Vol. III, c.296
  - Brucellosis Free Regions Order (British Columbia and Peace River Region of Alberta) SI/79-120
  - Brucellosis Low Incidence Regions Order (Ontario) SI/80-124
  - Brucellosis Low Incidence Regions Order (Québec) SI/78-106
  - Psittacine and Songbird Importation Prohibition Order SOR/80-772 (in process of repeal)
  - Reportable Diseases Order (Contagious Equine Metritis) SI/78-68
  - Reportable Diseases Order (Pseudorabies) CRC, Vol. III, c.297

- Appropriation Acts
  - Rabies Indemnification Regulations CRC, Vol. III, c.340

- Canada Agricultural Products Standards Act RSC 1970, c.A-8
  - Agricultural Standards Inspectors Regulations SOR/78-264
  - Beef Carcass Grading Regulations SOR/78-563
  - Hog Carcass Grading Regulations SOR/78-313
  - Lamb and Mutton Carcasses Grading Regulations SOR/78-861
  - Veal Carcass Grading Regulations SOR/78-564
  - Wool Grading Regulations CRC, Vol. III, c.294
  - Egg Regulations CRC, Vol. II, c.284
  - Processed Egg Regulations (s.3,5&8) CRC, Vol. II, c.290
  - Processed Poultry Regulations SOR/78-169
  - Dairy Products Regulations SOR/79-840
  - Fresh Fruit and Vegetable Regulations (s.3) CRC, Vol. II, c.285
  - Produce Licensing Regulations CRC, Vol. III, c.292
  - Honey Regulations (s.3,5&8) CRC, Vol. II, c.287
  - Maple Products Regulations CRC, Vol. II, c.289
  - Processed Products Regulations (s.3,5&8) CRC, Vol. III, c.291

- Criminal Code RSC 1970, c.C-34
  - Pari-mutuel Payments Order SI/81-1
  - Race Track Supervision Regulations (s.188) CRC, Vol. V, c.441

- Feeds Act RSC 1970, c.F-7
  - Feeds Regulations CRC, Vol. VI, c.665

- Fertilizers Act RSC 1970, c.F-9
  - Fertilizers Regulations CRC, Vol. VI, c.666

- Financial Administration Act RSC 1970, c.F-10
  - Destructive Pests Inspection Fees CRC, Vol. VI, c.696
  - Quarantine and Inspection Service Fees CRC, Vol. VIII, c.725

- Fruit, Vegetables and Honey Act RSC 1970, c.F-31
  - Fruit, Vegetables and Honey Regulations CRC, Vol. IX, c.875

- Hay and Straw Inspection Act RSC 1970, c.H-2
  - Hay and Straw Inspection Regulations CRC, Vol. IX, c.920

- Humane Slaughter of Food Animals Act RSC 1970, c.H-10 (subject to repeal)
  - Humane Slaughter Regulations CRC, Vol. IX, c.937

- Livestock and Livestock Products Act RSC 1970, c.L-8
  - Hatchery Regulations CRC, Vol. XI, c.1023
  - Wool Grading Regulations SOR/79-297

- Meat and Canned Foods Act RSC 1970, c.M-6 (subject to repeal)

- Meat Inspection Act RSC 1970, c.M-7 (subject to repeal)
  - Meat Inspection Regulations SOR/79-579

- Meat Inspection Act (Proposed)

- Pest Control Products Act RSC 1970, c.P-10
  - Pest Control Products Regulations (s.5&9) CRC, Vol. XIII, c.1253

- Pesticide Residue Compensation Act RSC 1970, c.P-11
  - Pesticide Residue Compensation Regulations (s.4) CRC, Vol. XIII, c.1254

- Plant Quarantine Act RSC 1970, c.P-13
  - Eggplants and Tomatoes Production (Central Saanich, B.C.) Restriction Regulations SOR/82-488
  - Emergency Plant Infestation Regulations SOR/79-642
  - Golden Nematode Order SOR/80-260
  - Plant Quarantine Regulations (S. 4 & 9) CRC, Vol. XIV, c.1273
  - Potato Production and Sale (Central Saanich) Restriction Regulations SOR/82-186

- Seeds Act RSC 1970, c.S-7
  - Seeds Regulations (s.4&7) CRC, Vol. XV, c.1400
  - Seeds Variety Order (s.4) CRC, Vol. XV, c.1401
  - Weed Seeds Order CRC, Vol. XV, c.1402

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $168,683,500 in support of the 1985-86 Canadian Forestry Service Program. The remaining expenditures, estimated at $6,784,000 for contributions to employee benefit plans will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Canadian Forestry Services Program		
35	Operating Expenditures	73,590	61,461
40	Capital Expenditures	31,236	31,102
45	Grants & Contributions	63,858	47,168

*The Forestry Services Program was included in the 1984-85 Main Estimates for Environment.

Section I
Program Overview

A. Highlights

Recent organizational changes have resulted in the movement of the Canadian Forestry Service from Environment Canada to Agriculture Canada under the new Minister of State (Forestry). This movement reflects the increased emphasis being placed on the forest resource within the Canadian economy. Other highlights for the Program for 1985-86 are as follows:

Forestry Development

- Continue negotiations for, and where appropriate, to implement new federal/provincial cost shared forestry development agreements with the provinces of British Columbia, Quebec, and Newfoundland (see page 5-15);

- Facilitate the construction of the Maritime Forest Ranger School through contributions of $10.5 million, of which $6.7 million will be required for 1985-86 (see page 5-16);

- Implement the 1985-86 Federal-Provincial forestry agreements in the provinces of New Brunswick, Nova Scotia, Prince Edward Island, Ontario, Manitoba, Saskatchewan and Alberta with expenditures in 1985-86 of $53 million (see page 5-15);

- Implement the 1985-86 forestry portion of the "plan de développement économique pour la région du Bas Saint Laurent/Gaspesie" with expenditures in 1985-86 of $4.5 million (see page 5-16);

- Develop and implement a comprehensive forest management program for federal lands belonging to the National Defence, other federal agencies, or Indian Bands (see page 5-15).

Forest Research and Technical Services

- Emphasize the use of high technology in forest management research to increase the existing knowledge base and improve production, protection and management techniques (see page 5-20).

- Upgrade regional forestry research facilities at an estimated capital cost of $72 million for four facilities. Expenditures in 1985-86 are estimated at $25.7 million (see page 5-21).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For details see page
Forestry Development	72,515	106,214	(33,699)	5-14
Forest Research and Technical Services	95,907	95,763	144	5-17
Management and Administration	7,551	5,640	1,911	5-22
Total expenditures	175,973	207,617	(31,644)	
Less revenue credited to the Vote	(505)	(459)	(46)	
Total appropriations	175,468	207,158	(31,690)	
Authorized person-years	1,286	1,141	145	

Explanation of Change: The financial requirements for 1985-86 are $175,468 or $32 million less than the 1984-85 forecast expenditures. This decrease is primarily due to:

- decrease in salary, other operating costs and contributions related to the Environment 2000 Program ($24 million)
- decrease in contribution funds related to the Forestry Development Agreements ($22 million)
- increase in salaries due to inflation $4 million
- increase in contribution funds related to the Maritime Forest Ranger School $6 million
- additional funds for the contribution to the University of Moncton and construction and operation of the Forestry Satelite Research Centre. $2 million
- Increase in contribution to the Employee Benefit Plan $1 million
- Increase in grants to universities $1 million

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $62 million or 43% higher than the 1984-85 Main Estimates of $145 million (Extracts from Part II of the Estimates, page 5-4). The difference of $62 million reflects the following major offsetting items:

- Environment 2000 Program $24 million
- Forestry Development Agreement $34 million
- Contribution to FORINTEK $ 4 million

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: Gross Expeditures by Object (Percentage Distribution) 1985-86

C. Background

1. Introduction

The Canadian Forestry Service (CFS) fulfills the federal government's responsibility for the protection, management, and utilization of Canada's forest resource. The Program is carried out in close cooperation with a variety of jurisdictions within the federal government, with other levels of government, and with the forest industry. In addition, other federal departments such as Regional and Industrial Expansion and Indian Affairs and Northern Development carry on forestry-related work.

The long-established forestry research role of CFS concentrates on developing cost effective protection and silvicultural methods such as biological pest control, tree genetics and micropropagation to improve forest growth and yields, and forest ecosystem research. The transfer of technology developed through government-funded research is stressed in order to maximize the impact of this technology on the resource base and the forest industry.

Federal-provincial forestry agreements are designed to stimulate increased levels of forest management by the provinces and industry with the ultimate aim of a self-sustaining and growing forest sector in Canada. The immediate focus is on the rehabilitation of unsatisfactorily restocked forest land and on timber stand improvement in an effort to increase the quality and quantity of productive forest land while creating employment opportunities.

2. Legal Mandate

The principal act governing the responsibilities of the Canadian Forestry Service is the Forestry Development and Research Act, 1966-67. This act provides legislative authority for: the conduct of research relating to the protection, management, and utilization of the forest resource; entering into agreements for forest protection, management and utilization; the conduct of economic studies and analyses of the forest sector; implementation of forest management programs on federal lands; and the establishment of Forest Experimental Areas.

3. Program Objective

The objective of the Canadian Forestry Service is to promote and enhance the sustained economic utilization of Canada's forest resource through environmentally sound forest management.

4. Program Organization for Delivery

Activity Structure: The Canadian Forestry Service is divided into three activities which reflect the focus of the Program and its efforts in meeting its stated objective. Each activity is further subdivided to refine the objective and operation of Program. Figure 4 illustrates the activities of the Program.

Figure 4: Activity Structure

Organization Structure: The activities of the Canadian Forestry Service Program are admininistered through four directorates plus two groups reporting directly to the Assistant Deputy Minister. The operations of the Program are delivered through central headquarters in Ottawa, regional research establishments and regional development offices across the country.

The relationship between the program organization and activity structure as well as the breakdown of 1985-86 resources is shown in Figure 5 on page 5-11.

Figure 5: **Resources by Organization and Activity ($000)**

Forestry Development	72,516				72,516

Person-years	176	1,013	30	67	1,286

D. Planning Perspective

1. Environment

Forestry is one of Canada's key renewable resource sectors. If properly managed, it will continue to provide significant benefits to the Canadian economy. The forest sector contribution to Canada's economy is currently valued at $25.9 billion annually. The forest industry directly employs 310,000 workers in the logging, wood, pulp, paper and allied industries. Analysis of forest-based communities has shown that each job in the woods and mills is associated with one additional job locally and a second one elsewhere in the national economy. Thus, the forest sector accounts for approximately one million jobs in total or nearly one in 10 Canadian jobs.

In addition to satisfying most domestic needs, forest products comprise Canada's leading export sector accounting for one quarter of the total world trade in manufactured forest products. At present, sales to foreign markets generate an annual net trade surplus of $11 billion. The most significant characteristic of Canada's external markets is their vulnerability, that is, in the concentration of a few products in a few market areas. Difficulties which arise in retaining or increasing Canada's share of the international market include tariff barriers and foreign protectionist pressures which could jeopardize the current reliance on single markets for the majority (90%) of Canada's forest products.

Forest Management: The lack of systematic forest management in the past has resulted in a depletion of the forest resource. The reduction in available wood supply, particularly softwoods, has been caused by poor forest management techniques and damage from a variety of uncontrolled pests, diseases and fire. Alleviation of the current supply crisis will only be realized through the commitment of all levels of government and the forest industry.

Pesticide Use: Public concerns over the short and long-term effects of pesticides have required a cautious approach to their development and use. The forest industry as well as the general public look to government sources for research on the environmental impact and fate of these substances, funding for development of pesticides and application techniques, and regulation of these valuable tools.

Resolution of these difficulties is necessary for the long-term health of the forest sector, and is of particular concern in the Program's efforts to maintain and expand Canada's foreign markets.

2. Initiatives

In response to the above-mentioned issues, the following initiatives will be addressed by CFS during 1985-86:

Forestry Development

- Forest management is increasingly being pursued through cost-shared federal/provincial forestry development agreements. In accordance with agreements currently in effect, contributions toward this initiative will be approximately $43 million in 1985-86 (see page 5-15). In addition, CFS will contribute $3 million to implement the forestry component of "le Plan de développement économique de la région du Bas Saint Laurent/Gaspésie" (see page 5-16).

- Forest management programs for federal lands are being developed to increase the value of these lands while providing an efficient means to create local employment (see page 5-15).

Forest Research and Technical Services

- Emphasis is being placed on research efforts in biotechnology, for example, nitrogen fixation and micropropagation to improve the growth and yield of forest trees (see page 5-20). Specific examples of initiatives in this area are:

  - techniques to isolate and cultivate Frankia for experimental use with other tree species; Frankia is a nitrogen fixing organism that may have the potential to colonize other tree species and supply nitrogen for improved growth.

  - the use of embryo cultures of larch will be extended to a precommercial stage of development; this technique will allow rapid production of tree seedlings and reduce the time required for genetic improvement of larch.

- Research efforts in other areas are directed to ensuring the economic utilization of Canada's forest resource through improvement in methods of protecting the resource base and the environment and efficient use of forest products.

3. Program Effectiveness

The objective of the Canadian Forestry Service Program is to promote and enhance the sustained economic utilization of Canada's forest resource through environmentally sound forest management. The Program is carried out in close cooperation with a variety of jurisdictions within the federal government, with other levels of government, and with the forest industry. Thus, it must be recognized that the measures of achievement cannot be solely attributed to the performance of the Program but are the sum of a variety of contributions. Nonetheless, the Program is a major contributor to the success of the forest sector.

The achievement of this objective to date has been attained through a number of avenues:

- Forestry development agreements negotiated with provincial governments have increased the level of intensive forest management techniques.

- Funding to private organizations for biotechnological research on microbial enzymes for wood digestion is providing new techniques for recycling and utilizing forest biomass.

- Support for private sector research into mechanization of forest renewal equipment is resulting in the development of improved machinery and methods of forest management.

- Forest product utilization research, supported by the federal government has, over the last five years, provided technology to the forest industry which industry projects will result in annual savings of $25 million.

- Remote digital sensing research has resulted in the development by private industry of ARIES III, an integrated remote sensing analysis system. The system is used as a tool for forest appraisal to provide information on current forest composition, forest health and rates of depletion and renewal. Conventional inventory methods that rely on aerial photography and ground samples are expensive, out-dated and of unsatisfactory resolution.

- A forest fire control system has also been developed and put into action in western Quebec and the technology is being transferred to Ontario and the Prairie provinces in the next two years.

Section II
Analysis by Activity

A. Forestry Development

Objective

To provide direct stimulation of regional development within the forest sector and contribute to the enhancement of the forest resource base by encouraging and supporting forest renewal, intensive forest management and increased forest productivity on a sustainable basis.

Resource Summary

Expenditures for the Forestry Development Activity account for approximately 41% of total 1985-86 Canadian Forestry Service Program expenditures and 14% of total person-years.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Forestry Development	72,515	176	106,214	177	108,899	100

Approximately 10% of the expenditures in this Activity are for personnel costs. Transfer payments, in the form of grants and contributions, are set out in Figure 17 on page 5-27, and account for $54 million or 75%, with the balance used for other operating costs and capital.

Description

This Activity provides direct stimulation of regional development within the forest sector and the enhancement of the forest resource base. It encourages and supports forest renewal, intensive forest management and increased productivity. Federal-provincial cost-shared agreements provide support to private industry and private woodlot owners for forest renewal and intensive forest management. This support takes the form of funding, technical advice and expertise to improve forest management techniques. These agreements are designed to guide the short, medium and long-term development of the forest sector. The initiatives undertaken are designed to encourage intensive forest

management while contributing to income opportunities and human resource development. These efforts are developed in close consultation with the provinces.

In addition, forest management plans are developed for federal lands in conjunction with native people and Indian and Northern Affairs Canada. These plans provide seed money for startup, technical expertise, advice and training and are directed to providing native people with a self-supporting and sustainable forest resource. Forest management endeavors on other federal lands create local employment, provide wood for conversion plants and demonstrate intensive forest management.

Performance Information/Resource Justification

Federal-provincial cost-shared development agreements provide a stimulus to the forest industry and contain various targets with respect to enhancement of the forest resource. The agreements are intended, by means of financial leverage and direct delivery programs, to move the provinces and industry from a period of 'mining the forest resource base' to one of management for improved productivity. Currently, a substantial part of the forest renewal program is delivered through these agreements.

The negotiation of new forest development agreements and the implementation and administration of existing agreements will require 176 person-years in 1985-86. Agreements presently being administered and the estimated 1985-86 expenditures are shown in Figure 7. Of the total $53 million, $43 million is in contributions and $10 million in operating and capital.

Figure 7: 1985-86 Forestry Development Agreements ($000)

Province	Period Covered	$000
Newfoundland	1981-1985	5,282
Newfoundland (new agreement)	Under negotiation	
New Bunswick	1984-1989	8,257
Nova Scotia (old agreement)	1982-1988	7,048
Nova Scotia (new agreement)	1984-1988	4,116
Prince Edward Island	1983-1988	2,967
Quebec	Under negotiation	
Ontario (old agreement payout)	1978-1984	4,895
Ontario (new agreement)	1984-1989	11,830
Manitoba	1983-1989	2,375
Saskatchewan	1984-1989	4,306
Alberta	1984-1989	1,989
British Columbia	Under negotiation	
Total		53,065

The new Maritime Forest Ranger School located in Fredericton, N.B., will be an integral part of a Maritime Forestry Complex, consolidating in one area all forest-related educational, research, and management facilities for the Maritimes. It will serve all four Atlantic provinces and will continue to contribute substantially towards upgrading technical skills and furthering resource management techniques in the forest sector. The 1985-86 CFS Program expenditures for this will be $6.7 million.

In addition, in 1985-86, CFS will expend a total of $4.5 million, which includes $3 million in contributions, to implement the forestry component of "le Plan de développement économique pour la région du Bas Saint-Laurent/Gaspésie". This plan covers a federal direct delivery program which began in 1984 with a total budget of $19 million over five years. Federal contributions over the five years cover forest management, popularization and technology transfer, technical and/or economic studies, and administration and operations. The program involves three unions representing wood producers with an estimated 12,000 woodlot owners.

B. Forest Research and Technical Services

Objective

To enhance the forest resource base through discovery, development, demonstration, implementation and transfer of innovations to solve problems and increase the efficiency and effectiveness of forest mangement.

Resource Summary

Expenditures for the Forest Research and Technical Services Activity account for approximately 54% of total 1985-86 Canadian Forestry Service Program expenditures and 79% of total person-years.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Forest Environment Research	3,796	79	3,824	78	4,200	77
Forest Products Research	8,055	192	8,114	190	8,914	187
Forest Protection Research	10,331	215	10,407	213	11,431	210
Forest Utilization Research	9,269	3	9,337	3	10,256	3
Forestry Services	11,216	179	11,298	177	12,410	174
Management and Administration	53,240	345	52,783	340	34,410	335
	95,907	1,013	95,763	1,001	81,621	986
Less Revenue credited to the Vote	(505)	-	(459)	-	(420)	-
Total	95,402	1,013	95,304	1,001	81,201	986
Revenue	300	-	167	-	288	-

Approximately 46% of the expenditures in this Activity are for personnel costs. Transfer payments, in the form of grants and contributions, are set out in Figure 17 on page 5-27, and account for approximately $9 million or 9% with the balance used for other operating costs and capital.

Revenue of approximately $300,000 is generated through the sale of timber permits, forest products, rental of rooms and houses and miscellaneous recoveries. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Revenue of approximately $505,000 is generated through miscellaneous recoveries for research and technical services and is credited back to the vote for use within the program.

Description

This Activity contributes to the forest resource base through discovery, development, demonstration, implementation and transfer of innovations to solve problems and increase the efficiency and effectiveness of forest management. Research is conducted in the areas of forest environment, production, utilization, and forest protection from fire, insects, and disease, the results of which are published. Technical advice and scientific information is provided to federal departments and agencies, the provinces, industry, academic institutions and other countries.

This Activity also administers special cooperative research programs and provides financial support for forestry research to universities and other eligible organizations. In addition, specialized services are provided to federal departments and agencies, provinces and the forest industry.

This Activity consists of the following six sub-activities:

Forest Environment Research: Research is carried out to assess the impact of forestry practices on the environment, the impact of environmental problems on the forest resource and to further the knowledge of forest ecosystems. Of particular concern is the impact of acid deposition on the long-term productivity of forest ecosystems, and conversely, the degree to which these systems modify the toxic composition of the acid deposits.

Forest Products Research: Research is conducted to develop improvements in the genetic quality of major tree species, improved methods of reforestation, tree and stand growth and forest management systems.

Forest Protection Research: Research is directed toward increasing of knowledge on forest biology, the management of forest insects, disease and weeds, improved methods of prediction, detection, prevention and control of forest fires, and pest control including biological and chemical agents. In addition, research is conducted on the most urgent forest pest problems in order to quickly develop methods that will reduce damage from particular insects and diseases with minimal adverse effects on the environment.

Forest Utilization Research: Research is directed toward the utilization of forest resources and the development of new products (ie., composite wood products such as wafer board) and codes and standards which are required to retain foreign markets. Cooperative agreements with the private sector support research in wood products and harvesting. Research on the use of forest resources as an energy source is administered through the Energy From the Forest program (ENFOR) in cooperation with Energy, Mines and Resources and the National Research Council.

Forestry Services: This sub-activity implements and maintains a surveillance program that detects, monitors and reports on the distribution and impact of insects and diseases on the forest. It is also responsible for the compilation and maintenance of a computerized inventory of the forest resource base. Technical advice, forest resource data, technology transfer and publication of scientific information provide forest managers, industry and the general public with information necessary for sound management. In addition, transfer payments in the form of grants and contributions are provided to universities and other eligible organizations for the conduct of forestry research.

Management and Administration: The Management and Administration sub-activity provides program management, direction and coordination to the Forest Research and Technical services activity, including physical plant maintenance and the upgrade of major research facilities.

Performance Information/Resource Justification

The Canadian Forestry Service undertakes a large number of research projects each year involving approximately 300 scientists at eight research establishments across the country. An important aspect of this work is technology transfer, which allows the forest industry to apply technological advances developed through research.

Figure 9 on page 5-20 is a summary by sub-activity of specific initiatives for 1985-86. Additional details are as follows:

Forest Environment Research: Research in this area will concentrate on expanding the basic understanding of ecosystem processes and their reactions to impacts such as forestry practices, pesticides and acid deposition in order to develop techniques to minimize stress on the environment.

Forest Production Research: The emphasis in this area will be on micropropagation and genetic engineering in an effort to produce genetically superior stock in a much shortened time-frame.

Forest Protection Research: The focus of this research continues to be the development of pest management alternatives and improved fire management techniques.

Forest Utilization Research: Resources will be used for the development of codes and standards, new products, and improved processing procedures.

Figure 9: Research on Forestry Resources

Research Area	Results	$	P-Y	Specific Issues
Forest Environment Research	Assessment of the impact of forestry practices on the environment, the impact of environmental problems on the forest resource and further the knowledge of forest ecosystems.	3,796	79	- effects of acid rain on forest and site productivity - impacts of forestry practices - establishment of an Acid Rain Early Warning System (first report) - impact of forest management harvesting systems on the stability of the environment of the Queen Charlotte Island (Report)
Forest Products Research	Improvements in tree stands and the genetic quality of major tree species, and improved methods of reforestation, tree and stand growth and forest management systems.	8,055	192	- production and utilization of the forest biomass - use of biotechnology in nitrogen fixing capabilities of selected forest species - effects of various harvesting methods of black spruce to optimize regeneration - Forest Weeds program to develop weed suppression practices designed to release inhibited young conifer stands - transfer of clonal propagation technology for larch to the New Brunswick forest industry
Forest Protection Research	Development of knowledge of forest biology, management of forest insects, disease and weeds, improved methods of prevention and control of forest fires and pest control including biological and chemical agents.	10,331	215	- losses from mountain pine beetle and spruce budworm - impact of pesticides and biological control - impact of fire management systems/reduction of losses from forest fires - transfer and implementation of forest fire management system to the Prairie provinces
Forest Utilization Research	Development of improved methods of producing energy from forest resources; wood products technology, and codes and standards.	9,269	3	- mechanization of silviculture - codes and standards for light frame structures - improved product quality and new uses for forest products

Forest Services: Expenditures on forestry services in 1985-86 are estimated at $11.2 million and 179 person-years. These resources will be expended to: provide forest management services for federal lands; survey, monitor and report on a variety of insect and disease conditions throughout the country; collect a variety of data on forest resources; provide a program for transferring research knowledge and technology to the provinces and client users; and support forestry education and research.

Management and Administration: In 1985-86, 345 person-years and $53 million will be required to direct, coordinate and provide program management to the Research and Technical Services Activity. Approximately 50% of the person-years and $14 million relate to the management and administration of the physical plant of the research establishments.

Figure 10 details the upgrade of regional research facilities.

Figure 10: Research Facilities Upgrade, 1985-86 ($ million)

Facility	Location	$	
Maritime Forest Research Centre	Fredericton, N.B.	11.4	New research centre
Laurentian Forest Research Centre	Ste. Foy, Quebec	5	Expansion and upgrading of facilities
Great Lakes Forest Research Centre	Sault Ste. Marie,	6.9	Addition to the research centre
Pacific Forest Research Centre	Victoria, B.C.	2.4	Expansion of the research centre

C. Management and Administration

Objective

To provide economic analyses of Canada's forest sector; develop policies; maintain relations with other levels of government and organizations concerned with the forest sector on the domestic and international levels; provide management, direction, planning, coordination, communication, personnel, financial and administrative services to the program.

Resource Summary

Expenditures for the Management and Administration Activity account for approximately 4% of total 1985-86 Canadian Forestry Service Program expenditures and 8% of total person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Management and Administration	5,198	67	3,371	57	4,079	46
Policy, Planning and Economics	2,353	30	2,269	26	1,238	26
	7,551	97	5,640	83	5,317	72

Approximately 56% of the expenditures in this Activity are for personnel costs. Transfer payments, in the form of grants and contributions, are set out in Figure 17 on page 5-27, and account for $600,000 or 8%, with the balance used for other operating costs and capital.

Description/Resource Justification

This Activity is responsible for the general management of the Canadian Forestry Service Program and is made up of the following two elements:

Management and Administration: The Management and Administration element provides program management, direction and coordination, including the office of the Assistant Deputy Minister (Forestry), as well as communication, personnel, financial and administrative services in support of program activities.

Policy, Planning and Economics: This sub-activity develops economic forecasts of supply and demand for Canada's forest products, plans for the management of the program and policies for forest renewal and related research and development. In addition, it maintains international relations and domestic relations with provincial governments, universities, and private sector organizations concerned with forestry.

In 1985-86, 97 person-years and $7.5 million will be required by the Management and Administration activity. The primary requirement is to cover salaries and other related personel costs. A contribution of $100,000 will be made to the Canadian Inter-Agency Forest Fire Centre and $500,000 to the University of British Columbia for economic studies.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The Canadian Forestry Service's expenditures by object are presented in Figure 12.

Figure 12: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	48,460	45,821	40,451
Contributions to employee benefit plans	6,784	5,392	5,874
Other personnel costs	726	234	351

Heating, Power and Stationary Plant Operations	18	18	21	18,242 - 35,598	25,433

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 15 presents a summary by major category of the Canadian Forestry Service's capital expenditures. Figure 16 provides details on major capital projects which are those having expenditures of $250,000 or more.

Figure 15: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Major construction	25,667	25,010	2,887
Minor construction (Fac. Main.)	290	290	290
Equipment acquisition	5,279	5,774	9,293

5. Revenue Analysis

Figure 18 provides a listing of revenue generated by the Program. Revenue credited to the Consolidated Revenue Fund is not available for use by the Program. Revenues credited to the Vote are used in the Forest Research and Technical Services Activity.

Figure 18: Revenue Sources by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue credited to the Vote			
Forest Research and Technical Services			
Miscellaneous recoveries for research and technical services	505	459	420
Total revenue credited to the Vote	505	459	420
Revenue credited to the Consolidated Revenue Fund (CRF)			
Forest Research and Technical Services			
Proceeds from sales	80	75	100
Rental of rooms and houses	118	92	96
Meals	75	-	60
Miscellaneous	27	-	32
Total revenue credited to CRF	300	167	288
Total revenue	805	626	708

B. Cost Analysis

Net Program Cost

The Forestry Program's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the Program on a full cost basis. Also to be taken into account are any revenues generated by the Program that are credited directly to the Consolidated Revenue Fund.

Figure 19: Net Cost of Program by Activity for the Year 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	1984-85 Forecast
Forestry Development	72,515	1,585	74,100	-	74,100	107,340
Forest Research and Technical Services	95,907	8,941	104,848	(805)	104,043	104,704
Management and Administration	7,551	792	8,343	-	8,343	6,432
	175,973	11,318	187,291	(805)	186,486	218,476

The adjustments made to the estimated expenditures to arrive at a total net cost include accommodation provided without charge by Public Works to the Department ($10,224,000), other services provided without charge by Supply and Services ($135,000), employees share of insurance premiums ($854,000), employees compensation payments ($105,000) and inclusion of all revenues generated by the Program as set out in Figure 18 on page 5-29.

C. Additional Information

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $42,256,000 in support of the Canadian Grain Commission in 1985-86. The remaining expenditures, estimated at $4,446,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Canadian Grain Commission		
50	Program expenditures	42,256	37,625

Salaries of the Commissioners	172,200	189,797	189,797
Salary of the Supervisor over the Winnipeg Commodity Exchange (Grains Futures Act.)	55,100	60,746	60,746
Refunds of amounts credited to income in previous years		46	46
	3,947,300	4,391,589	4,391,589
	39,371,000	38,815,289	37,182,141

A. Plans for 1985-86

1. Highlights

For 1985-86, the Canadian Grain Commission Program has established the following highlights:

- to improve operating efficiencies, by:
  - increasing grain inspections per person-hour by a minimum of 2% from the previous year (see page 6-20); and
  - achieving 99.2% grain grading accuracy for original visual inspections (see page 6-20).
- to improve effectiveness through major equipment installations;
  - installing eight automated grain sample delivery systems (see page 6-20);
  - installing fourteen near-infrared spectroscopy whole grain analysers in the grain inspection operation (see page 6-20); and
  - installing gas chromatograph mass spectrometer equipment in the grain research laboratory (see page 6-24).
- to assess and report on the feasibility of electronic transmission current grain statistical publications to major licensees and other users (See page 6-28).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86		Forecast 1984-85		Change		For details see page
	Expenditure	Revenue	Expenditure	Revenue	Expenditure	Revenue	
Grain Inspection	21,404	21,320	18,589	18,406	2,815	2,914	6-18
Grain Weighing	11,238	13,000	9,078	12,500	2,160	500	6-21
Grain Testing and Research	6,668	1	5,170	1	1,498	-	6-23
Economics and Statistics	4,278	2,953	3,966	3,214	312	(261)	6-26
Administration	3,114	5	2,467	5	647	-	6-29
	46,702	37,279	39,270	34,126	7,432	3,153	
Authorized Person-Years	930		910		20		

The 1985-86 expenditure plan of $46.7 million represents an increase of approximately $7.4 million over the 1984-85 forecast. Major items contributing to this increase are:

- price increases for personnel costs: $1.5 million
- if grain production and exports follow traditional and expected volumes, 5.4 million additional funds will be required to provide Inspection and Weighing services. The adverse crop effects from 1984 will substantially reduce the incremental funding needed in 1985-86.
- increased funds for public relations and relocation of Thunder Bay office: $0.5 million

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: Gross Expenditures by Object (Percentage Distribution) 1985-86

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are:

- Although the inspection activity was unable to achieve its goal of 4% work efficiency improvement, it did manage a 2.5% improvement in inspection operations efficiency.

- Three automated delivery systems were installed and three others were delayed due to a costing dispute. Increased research testing and analysis was achieved as planned, but the near-infrared reflectance and transmission spectroscopy report was delayed until 1985 due to the unsuitability of existing reference methods.

- The anticipated 99.5% grading accuracy for original visual inspections proved to be unrealistic. A level higher than the 99.2% target for 1985-86 could be attained but would result in decreased efficiency and would not be cost effective. The level attained in 1983-84 was 99.1%.

- The weighing operation handled 77.5 million tonnes of grain and utilized 221 person-years in 1983-84, an average 3.5 person-years per million tonnes. This resulted in a 20.2% improvement in operational efficiency from the previous year.

- In 1983-84, there were 904 scales inspected and 9,304 person-hours expended with the work ratio declining to 0.10. The 17% drop in efficiency, compared to the planned 2% increase, resulted from the training of new personnel, which will continue into 1984-85.

- Twenty-five major compounds were monitored in the Pesticide Residue Analysis Section, as planned.

- The planned project on expanding the use of new-infrared reflectance (NIR) and transmission spectroscopy using whole kernels to determine fibre content of grain and chlorophyll content of rapeseed, was delayed due to the unsuitability of existing reference methods. Recently the laboratory has developed a new and improved reference method for determining chlorophyll in rapeseed which will be used to calibrate the NIR procedure and avoid difficulties with seed coat colour. This research will continue into 1984-85 and the research paper has been rescheduled for completion by January, 1985 from the original target date of December 31, 1983.

- The planned increase in oilseed analysis from 1000 to 1300 samples in 1983-84 was achieved with 1378 analyses being performed.

- The comprehensive analysis of canola varieties of rapeseed was increased from 6 to 15, compared to the 19 planned for 1983-84. Research into the development of methods for performing the additional four analyses is progressing and, depending on the findings, the analyses will continue in 1984-85.

- The goal of performing 35 licensee audits was surpassed by 8 due to the hiring of a liability auditor rather than contracting audit services.

- The five economic analyses in support of the Commission's regulatory activities were prepared as planned.

- Documentation support services increased by 2.2%, without additional resources being required.

- A study was planned to assess the feasibility of implementing magnetic tape or direct data exchanges with grain companies and/or users of grain statistical data. This study was completed and the results implemented as planned.

2. Review of Financial Performance

Figure 4: Review of Financial Performance ($000)

	1983-84		
	Actual	Main Estimate	Change
Grain Inspection	18,055	18,198	(143)
Grain Weighing	9,135	10,280	(1,145)
Grain Testing and Research	4,717	4,786	(69)
Economics and Statistics	3,420	3,448	(28)
Administration	1,855	2,659	(804)
Total Expenditure	37,182	39,371	(2,189)
Revenue	36,734	29,782	6,952

Explanation of Change: The major deviation resulted from a reduced winter shipping program to the east coast and the increased use of automated equipment to provide regulatory services to the grain trade. The favourable revenue position reflects high export volumes for 1983-84.

C. Background

1. Introduction

The Canadian Grain Commission, an agency of the Government of Canada, administers the Canada Grain Act. The Commission works closely with grain producers and the grain industry to develop and implement policies to meet the objectives of the Canada Grain Act and needs of the Canadian grain industry. It establishes and maintains quality standards for Canadian grains to assist the marketing practices of the Canadian Wheat Board and other industry participants.

The Commission provides regulatory services of grain inspection and weighing at grain export locations in Canada. The Commission's computer documentation services assist various functions in the grain trade, e.g., grain unload documentation, stabilization, transportation statistics. The Grain Research Laboratory conducts basic and applied research on cereal grains and oilseeds, surveys grain quality and performs varietal studies. Revenue is generated from service fees for inspection, weighing and documentary services and is credited directly to the Consolidated Revenue Fund.

2. Legal Mandate

The legal authorities of the Canadian Grain Commission are contained in the Canada Grain Act and the Grain Futures Act. Other authorities include the Western Grain Stabilization Act, the Weights and Measures Act and the Inland Water Freightways Act.

3. Program Objective

To provide quality assurance of Canadian grain for the domestic and export markets in the interest of Canadian agriculture.

Sub-objectives:

- To promote maximum marketability of Canadian grain in the interest of the producer;
- To maximize the quality, nutrition and yield of Canadian grain; and
- To achieve cost recovery for services provided.

4. Program Organization for Delivery

The Commission is responsible to the Minister of Agriculture in reporting its activities to the Parliament of Canada. The Program is divided into four operational activities, the administrative function and eight sub-activities which parallel the activity structure. A director manages each operational activity under the overall direction of the Executive Director and the Chief Commissioner.

Figure 5: Program Activity Structure

D. Planning Perspective and Performance Review

1. Environment

The overall functions of the Canadian Grain Commission do not substantially change year to year. However, within any particular year, major grain trade situations often occur which affect Commission operations. This requires appropriate operational changes to provide service and to minimize adverse impact on budgetary resources.

Canadian grain exports have been steadily increasing over time, but some years do not coincide with the long-range trend. In 1983-84, 29.4 million tonnes of grain were exported compared to 29.0 million tonnes in 1982-83. In 1984 adverse prairie weather conditions, affected the 1984 crop decreasing grain production and quality by approximately 13%

and limiting exports to a forecasted 24 million tonnes. At the time of identifying resource needs for 1985-86, there was no expectation of a below-normal crop volume. But this now being the case; resource needs for 1985-86 will be noticeably less than budgeted. Long range forecasts of Canadian grain and oilseed exports continue to be 36 million tonnes by 1990.

The Commission is actively monitoring its deployment of resources and the cost of its services to the grain trade as part of effective management. Recent high volumes of grain exports have greatly assisted the Commission in moving to its goal of full cost recovery for regulatory functions. Annual service fees are being amended (within government restraint guidelines) to attain an average year-to-year full cost recovery.

The Commission is forecasting a reduced cost of operations for 1984-85 stemming from the adverse crop production of 1984. Because of a fee increase October 1, 1984, the downward impact on revenue has been minimized and the original budget is expected to be achieved.

There will however, be a carry-over effect on operations to fiscal year 1985-86. Expenditures will be reduced in line with operational needs. The Commission's service fees are planned for upward revision August 1, 1985 and to include costs of the Grain Research Laboratory (G.R.L.) (for the first time). Full cost recovery of the G.R.L. will be completed in the following or third year. For 1985-86, the combined effect of reduced costs and added revenue will reduce the Commission's net cost of operations by at least $2.0 million. The Commission's objective is to attain full program cost recovery over an average of three to five years. Fiscal year 1988-89 is planned for this position, assuming crop production and exports return to traditional and expected levels.

An administrative and policy issue of current concern is the grain transportation and handling system in Canada. The Commission is upgrading and expanding its information system to facilitate the implementation of the Western Grain Transportation Act. The Commission's role of surveillance and of recommending elevator tariffs and fees will become increasingly complex with the introduction of revised grain handling techniques.

In grain inspection operations, a major problem has arisen related to the proliferation of unlicensed red spring wheat varieties. This is of utmost concern to the Commission because of the high possibility of overall reduced grade levels of Canadian grain when variety mixing occurs. Grain testing and research functions are now actively underway to improve the Commission methods of non-visual inspection processes. These will permit the use of equipment for the early detection of substandard grades.

The introduction of automated grain handling equipment in the inspection and weighing process has helped the Commission meet increased service demands within current budget levels. The introduction of image analysis equipment to the grain grading system is being promoted because of the advantageous economic benefits starting from the grain inspection process and extending to include baking features and end use quality determination.

Activity in licensing and bonding of grain processors and dealers continues to require up-to-date monitoring of their financial status. The Commission has to maintain a highly active financial surveillance of grain dealers to protect producer interests. As such, regulatory services associated with licensing and bonding continue to be sensitive to the maintenance of adequate bonding under changing economic conditions, marketing trends and inventory changes (both of volume and type).

2. Initiatives

The Commission, in conjunction with the Canadian Wheat Board and pedigree seed growers, is participating in the development of a new type of wheat which will have a different end-product suitability. The new line HY320 is expected to yield approximately 30% more volume in some areas than current hard spring wheat varieties and should prove more economical to many farmers and the Canadian economy in general. Target buying countries include Brazil, China, Indonesia, Egypt and Mexico.

The Commission is substantially increasing its use of computers in its Grain Research, Inspection and Weighing operations. This will maximize use of scientific time on research projects and minimize time expended on related calculations, etc.. Similarly, micro- and mini-computers are being introduced for protein analysis, automated weight recordings and the monitoring of grain movement in elevators from receipt to shipment. In line with advanced regulatory techniques, the Commission is advancing the development of new skills and on site training of staff to facilitate the maximum effective use of both human and mechanical resources.

The construction of a new elevator at Prince Rupert, B.C. is presenting a major opportunity to the Commission in cooperatively working with the grain trade for the introduction of various models of computer equipment. Examples include computer scale recordings, communication of grain rail car particulars and grade data to a computer bank and for automatic transmission to a central C.G.C. office in Vancouver. The automation of a major terminal elevator at Vancouver has enabled the cooperative development of computer-based monitoring and data collection systems for the Commission. These developments are expected to increase the efficiency of monitoring elevator operations and support the documentation activity of the Commission. Furthermore, these projects are providing an opportunity to consider general changes

in computer applications and telecommunications at other major grain elevators across Canada serviced by the Commission. The Commission must not only keep abreast, but also be a leader in this venture as all grain handling data of terminal elevators is co-ordinated through the Commission's computer network.

3. Update on Previously Reported Initiatives

The installation of automated equipment in the grain inspection and weighing operations continues to be implemented and is providing resource savings in those areas where installations have been made. Because these projects involve financial input from the individual grain companies, current economic conditions are playing a significant role in the overall progress. Automation has helped the Commission provide essential services at an increased level within current budgeting levels.

The deployment of human resources to meet inspection regulatory services for specialty grain crops, continues to place pressure on the Commission in meeting the service demands, while endeavouring to identify more practical methods to satisfy the industry needs. The situation is requiring extensive travel of Commission staff to the various shipping locations particularly in Southern Ontario. Western Canada has also a noticeable increase of such speciality crops and thus required more of the inspection regulatory service.

Domestic and overseas markets are increasing their demand that grain be free of harmful levels of mycotoxin contamination, herbicides, pesticide residues, and other specified chemicals. The Commission's Research Division is actively developing procedures to meet export and domestic requirements and buyer demands by improving its analysis techniques and increasing the scope of compounds to be monitored. The division has increased its compound residue analysis by 25% for a total of 25 compounds.

4. Program Effectiveness

The Commission contributes to the Canadian economy through the services provided to the grain industry. The effectiveness of the Commission is measured by its value to the domestic and export trade and by the confidence of buyers in the quality of Canadian grain, the reliability of grade and weight certification, industry use of statistical publications and documents, and international acknowledgement of the excellence of our grain research activity and ultimately by the increased competitiveness of Canadian grain.

The Commission considered reducing its level of service to the trade in an effort to conserve resources and reduce service fees. The unwillingness of producers and grain dealers to accept this proposal clearly indicated strong industry support for continuation of Commission services. The service fees are structured to progress to full

cost recovery in line with government direction on inflationary controls. Other measures include the Commission's annual review and recommendation to the Governor in Council pertaining to grain elevator tariffs, related to the fees that licensees may charge for their grain handling function. Public tariff hearings are held and structured to provide for industry input.

The surety bonding requirements of licensees, which safeguard the interests of producers dealing with these licensees, are reviewed annually. Here a system of computerized evaluation of financial statements and standardized audits of licensee liability reports have provided improved licensee assessment and control.

The Commission's Grain Testing and Research is internationally recognized as a leading authority on cereal grains and oilseeds quality. Commission research scientists contribute to effectiveness through publication of their experimental findings in international scientific journals, plus visits to foreign grain research laboratories to exchange knowledge, become better acquainted with foreign grain requirements and to promote Canadian grain in filling such requirements. The success of these contacts is measured by the international recognition and acceptance of Canadian grain, as well as the numerous requests for our grain research personnel to attend and participate in sessions sponsored by the Canadian International Grain Institute and by marketing organizations such as the Canadian Wheat Board and from within the private trade as well as by specialized grain organizations such as the Canada Council and the Canadian Natural Millers Association. During the year, 101 special visitors from Canada and 20 other nations visited the Commission's facilities to discuss aspects of the Canadian certificate system and the quality of Canadian grain. As well, 80 organized groups numbering 1,100 people from 20 different countries toured our research facilities.

In addition, the Grain Research Laboratory activities have provided the intended impacts in a number of areas: maintaining buyer's confidence in the quality of Canadian grain, providing research expertise to assist the development of new markets, assisting the development of new markets and assessing new grain and oilseed varieties relative to Canadian standards.

Section II
Analysis by Activity

A. Grain Inspection

Objective

To regulate, control and certify grain quality at licensed grain elevators.

Resource Summary

Expenditures for the Grain Inspection Activity account for approximately 46% of total 1985-86 Grain Commission program expenditures and 47% of total person-years.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Grain Inspection Operations	21,404	435	18,589	417	18,055	419
Revenue	21,320	-	18,406	-	21,466	-

Revenue is generated from inspection and sampling services provided to the industry. Revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 7 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 7: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Grain Inspection Operations	18,055	18,198	(143)
Revenue	21,466	16,384	5,082

Explanation of Change: Automated inspection systems and the reduced winter rail movement of grain to the east coast resulted in a minor person-year surplus. The favourable revenue picture reflects higher grain volumes handled for export.

Description

Grain Inspection Operations: This Activity provides inspection services for all domestic and export grains. It establishes quality standards for all grains entering or leaving licensed terminals, periodically at transfer elevators and on request at domestic process elevators. It includes the regulation, control and quality certification of grain and the application of grain quality standards at licensed terminal elevators in the interest of producers and domestic and export markets. Major ongoing services are entomological inspection and services, guaranteed levels of protein content for marketing, grain documentation services and management of grain inspection policies and resources.

Performance Information/Resource Justification

Crop year productions 1983-84 amounted to 51.7 million tonnes. With inventories, 55.2 million tonnes were delivered within the system. Grain Inspection activity was 25% more efficient in relation to 1982-83 in its utilization of 422.4 person-years to provide inspection and grading services on shipments of: 30.3 million tonnes to vessels, 472.5 thousand railcars and 84.7 thousand tonnes of truck lot/container lot shipments. It also provided 582.4 thousand protein analyses and 125 thousand insect infestation analyses. There were 22 grain elevator audits and 70,000 unofficial grain sample inspections. The operation inspected 769,493 samples which when weighted by a work load factor, represents 923.4 thousand work units.

The 1984-85 crop year production is forecast at 47.0 million tonnes and estimated deliveries will be 50.5 million tonnes. Sample inspections will remain constant at 83-84 level and 417 person-years will be utilized. Grain shipments to vessels are forecast at 24.8 million tonnes an 18% decrease over 1983-84. The inspection work unit will decrease 8% to 850 thousand units. A 2% improvement in the ratio of work units to hours is the annual goal. Protein and Insect infestation analyses will increase 2.5% to 724.4 thousand analyses. There are 26 grain elevators to be audited and 64,000 unofficial grain sample inspections. 440 thousand railcars and 77.9 thousand tonnes of truck/container lot shipments will be inspected in the fiscal year.

The 1985-86 crop year production is forecast at 52.0 million tonnes with estimated deliveries ranging from 52.9 million tonnes to as high as 55.9 million tonnes. Sample inspections are forecast at 1% higher than 1983-84 or 932 thousand work units. 420 person-years will be utilized to provide all services. Grain exports to vessels are forecast at 30 million tonnes. The inspection work units will increase

proportionately to grain volume and will provide efficiency levels comparable to 1983-84. Protein and insect infestation analyses will remain constant at 1984-85 levels. 26 grain elevators will be audited and 80 thousand unofficial grain sample tests will be performed. 480 thousand railcar and 85 thousand tonnes of truck/container lot shipments will be inspected.

Specific goals and initiatives by 1985-86 are as follows:

- Increase the grain inspection work ratio efficiencies by 2% from the 1984-85 level. This is dependent upon the installation and use of electronic scales, additional mechanical samplers and whole grain analyzers.

- Provide grading accuracy for original visual inspections to 99.2%.

- Automate the inspection process as follows:

  (a) install eight automated sample delivery systems;

  (b) install 14 near-infrared spectroscopy whole grain analyzers in Vancouver.

B. Grain Weighing

Objective

To provide official monitoring of scale weights at licensed terminals and transfer elevators and within the grain trade in general; to perform weighover inventory audits of grain at terminal and transfer elevators; to inspect elevator facilities and elevator scales.

Resource Summary

Expenditures for the Grain Weighing Activity account for approximately 24% of total 1985-86 Canadian Grain Commission expenditures and 26% of total person-years.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Grain Weighing Operations	11,238	245	9,078	218	9,135	221
Revenue	13,000		12,500		11,817	

Revenue generated from weighing services provided to the industry is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 9 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 9: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Grain Weighing Operations	9,135	10,280	(1,145)
Revenue	11,817	10,277	1,540

Explanation of Change: The deferred introduction of full weighing services into eastern Canada coupled with the automation of weighing equipment and systems has resulted in a person-year and dollar surplus. The favourable revenue picture reflects higher grain volumes handled for export.

Description

Grain Weighing Operations: This Activity monitors the weights of all grain entering or leaving licensed terminals, periodically at transfer elevators and on request at domestic process elevators, other than that shipped for direct manufacture or processing into another product. It provides the following operational services: surveillence and certification of grain weights, monitoring of railcars for leaks and seals and defective storage equipment, investigation of all grain weight discrepancies; monitoring of all weighscales for accuracy and acceptance, and grain inventory audits at terminal and transfer elevators.

Performance Information/Resource Justification

Despite the historical increase in grain handling, the weighing activity efficiency has continuously improved, but is now expected to level off, provided grain volumes and throughputs remain consistent and major automated weigh equipment system installations proceed. The work comprises the weighing of grain into and out of terminal and transfer elevators, monitoring the accuracy of the scales used for this purpose and auditing grain stocks held in these elevators in accordance with regulatory services. In 1983-84 77.5 million tonnes were handled utilizing 221 person-years which is an average utilization of 3.5 person-years per million tonnes.

Expectations for 1984-85 are to handle 80 million tonnes of grain utilizing 218 operational person-years. Included in this figure are 11 person-years for management and administration and 9 person-years for special weighing activities in Eastern Canada. This would result in a predicted 3.6 person-year utilization per million tonnes of grain weighed and reflects a small improvement (2.8%) in efficiency from the previous year's level.

In 1984-85, 1,175 scale tests are planned using six person-years with an unchanged efficiency in person-year consumption per scale inspection over last year and grain inventory audits at terminal and transfer elevators will be maintained at 1983-84 levels.

The 1985-86 forecast is that 84.5 million tonnes of grain will be handled by 225 person-years for the total weighing operations. The efficiencies of monitoring weighing systems equipment to maintain the required high precision of bulk grain weighing and the provision of grain inventory audits at terminal and transfer elevators are predicted to remain constant during 1985-86.

C. Grain Testing and Research

Objective

To provide technical advice on the end-use quality of Canadian grains and oilseeds in support of quality control and marketing of Canadian grain responsibilities.

Resource Summary

Expenditures for the Grain Testing and Research Activity account for approximately 14% of total 1985-86 Canadian Grain Commission program expenditures and 11% of total person-years.

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Revenue	1		1		2	

Past Financial Performance

Figure 11 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 11: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Supportive Research and Development	4,717	4,786	(69)
Revenue	2	1	1

Explanation of Change: Travel associated with HY320 wheat market development was postponed and coupled with supply requirements being less than anticipated accounted for the change.

Description

The Grain Testing and Research Activity provides developmental research, scientific support and survey information. The laboratory's work consists of the following: at harvest time, it surveys the quality of the new crop of Canadian grains; during each crop year it continuously monitors the quality of Canadian grains moving from the farm to the domestic and export markets; it conducts tests annually to evaluate the quality of plant breeders' varieties of red spring and amber durum wheat, malting barley and canola/rapeseed as part of a broad Canadian program to develop new and better grains and oilseed for Canadian agriculture; finally, it conducts basic and applied research on the quality of grains and oilseeds and their end-products. This Activity has a single sub-activity, Supportive Research and Development.

Supportive Research and Development: The sub-activity provides expert knowledge, information and advice on the end-use quality of cereal grains and oilseeds. Research objectives are aimed at acquiring a better understanding of the "quality" of cereal grain and oilseeds, with particular reference to differences between varieties, effects of degrading factors, and relations to end-use processing technology and requirements. Modifications to existing analytical methods or development of new methods are undertaken to determine more meaningful or more efficient measurement, or quantification of particular end-use quality factors in cereal grains and oilseeds.

Performance Information/Resource Justification

The impact of the various end products of the Laboratory's work is related to such factors as: the validity of technical and scientific advice provided to the Commission and the Canadian Wheat Board; the accuracy of predictions of the quality characteristics of new crops; the comprehensiveness and usefulness of cargo monitoring and screening programs; the correct evaluation of the deleterious effects of different types of weather-affected seeds and subsequent setting of acceptable (visual) grade tolerance levels for different types of damage. Such factors are judged indirectly by such performance indicators as the frequency and seriousness of customer complaints (or conversely the absence of or compliments about) Canadian grain and oilseed quality and consistency, and instances of complaints or serious consequences related to unsound scientific advice or recommendations. Quality of basic research is judged by such indirect and often intangible indicators as peer evaluation, review and subsequent acceptance or rejection of papers by scientific journals, literature awards and honours bestowed on G.R.L. scientists.

In 1984-85, the feasibility study to upgrade the laboratory computer capabilities will be completed. Plans have been developed to commence purchasing micro-computers and accessories starting in 1984/85 with $92,000 and continuing over a 3-year period at an approximate cost of $542,000. In addition, a high-pressure liquid chromatograph (HPLC) has been ordered for the Oilseeds Laboratory to permit the laboratory

to upgrade its analytical capabilities in monitoring glucosinolate constituents in rapeseed/canola. End use studies on the new Canadian wheat class HY 320 are taking place with Mexico, Brazil, Egypt and Malaysia. India, Sri Lanka, Taiwan and Indonesia are also expected to participate in this research which will continue into 1985-86.

The Commission's current objective is to attain full program cost recovery which includes the Grain Research operating costs. This net position improvement is planned in stages over the next three years with full recovery being accomplished in 1988-89, assuming crop production and exports to traditional and expected levels.

In 1985-86, grain testing and research will continue to provide a laboratory varietal identification service to the Inspection Division and will resume research studies on varietal identification by electrophoresis. The purchase of new research equipment is planned and approved for 1985-86. A gas chromatograph mass spectrometer will be purchased and will provide the capability of immediately identifying the presence of harmful mycotoxin contamination in grain.

D. Economics and Statistics

Objective

To collect, compile and publish grain statistics, supervise the bonding of licensees, provide grain documentation services for grain handled through terminal elevators, register warehouse receipts; control tariffs at licensed elevators, and to fulfill producer car requests.

Resource Summary

Expenditures for the Economics and Statistics Activity account for approximately 9% of total 1985-86 Canadian Grain Commission expenditures and 11% of total person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Licensing, Registration and Documentation	2,571	72	2,380	72	2,331	61
Economic Research and Statistics	767	17	674	16	526	15
Computer Services	940	13	912	12	563	14
	4,278	102	3,966	100	3,420	90
Revenue	2,953		3,214		3,431	

Revenue is generated from licensing, documentation and registration services provided to the industry. It is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Past Financial Performance

Figure 13 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 13: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Licensing, Registration and Documentation	2,331	2,142	189
Economic Research and Statistics	526	685	(159)
Computer Services	563	621	(58)
Total Expenditure	3,420	3,448	(28)
Revenue	3,431	3,115	316

Explanation of Change: Increased audit travel and publication costs were higher than budgeted but were offset by savings from external contracting being handled by Commission personnel resulting in an overall minor surplus.

Description

The Economics and Statistics Activity is responsible for support functions to the regulatory and information responsibilities of the Commission. The Activity consists of the following three elements.

Licensing, Registration and Documentation: This element provides the following services: issues licences and monitors the performance of licensees to ensure their compliance with the provisions of the Canada Grain Act and regulations; registers and cancels negotiable elevator warehouse receipts for grain received and shipped at licensed terminal and transfer elevators; provides documentation on certified grades and weights and inward grain accounting service to the industry; and allocates railway cars to producers for self-loading.

Economic Research and Statistics: This element provides market information to the grain industry, and economic grain research expertise to the Commission in the area of policy formulation and regulatory controls.

Computer Services: This element provides computer services and expertise to the Commission, licensed terminal elevators, the Western Grain Stabilization Board and the Research Branch of Agriculture Canada.

Performance Information/Resource Justification

Licensing, Registration and Documentation: In 1983/84 the hiring of a Liability Auditor took place. This allowed the Division to upgrade the expected level of monitoring and analysis from 35 on-site financial audits to 43 licensee audits. The expectation for the number of audits in 1984/85 and 1985/86 is expected to remain the same, however larger companies are scheduled to be audited in 1984/85. In 1983/84, operational support services had a net increase of 2.2% over the previous fiscal year without any increase in operational resources. A microcomputer on line to the main frame computer in the Producer Cars area, operational since February 1984, has reduced the manual workload by 50%. This will continue to be a valuable tool especially with the 50% increased demand for producer cars (8,000 - 10,000 applications) in 1984/85.

To improve efficiency, the licensing activity will be automating various operations through the purchase of a computer terminal that interfaces with the Commission's main frame computer.

Economic Research and Statistics: In 1984/85 this sub-activity will prepare 9 weekly, 18 monthly and 91 annual publications. It receives 112 weekly reports from primary, process and transfer elevators which

it uses in the preparation of the "Grain Statistics Weekly". In 1985/86 some additions may be expected to the publication although the number of publications is not expected to increase. The Division prepared five economic analysis in support of the Commission's regulatory activities. In 1984/85 this section is expected to prepare 7 economic analysis - an increase of 60% over last year. This will be accomplished in part through the hiring of an additional economist. As the expertise of staff increases, an additional analysis is forecasted in 1985/86 for a total of 8.

In 1985-86 this section will assess the economics and feasibility of direct transmission of current publications to major licensees and other users.

Computer Services: There will be increasing demands for "custom" computer analysis within the Commission by 1985-86. Reviews of hardware/software configurations and client requirements in the division elements will be made to ensure adequate EDP to meet the needs of the future. There will be a purchase of equipment to interface with the main frame computer and micro-computers being installed in the licensing, registration and statistics areas. Productivity gains will be reflected in reduced time lags and increased program flexibility, while maintaining current or reduced operational costs and providing more information to clients. Increased computer training will be required in 1984-85 and 1985-86 to provide continued awareness and knowledge in micro-computer useage and technology.

E. Administration

Objective

To provide executive management, policy direction and administrative support services to all activities of the Commission.

Resource Summary

Expenditures for the Administration Activity account for approximately 7% of total 1985-86 Canadian Grain Commission program expenditures and 5% of total person-years.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Finance and Administration	1,245	20	987	19	768	20
Program Management	1,869	25	1,480	24	1,087	24
	3,114	45	2,467	43	1,855	44
Revenue	5		5		18	

Past Financial Performance

Figure 15 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 15: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Finance and Administration	768	1,216	(448)
Program Management	1,087	1,443	(356)
Total Expenditure	1,855	2,659	(804)
Revenue	18	5	13

Explanation of Change: Reduced administrative travel for market development and trade requirements coupled with reduced material and supply purchases.

Description

The Administration Activity has the following two elements.

Program Management: This element provides direction, control and planning of policy and resources, taking into account the requirements of the Canada Grain Act and the objectives of the Department. It is administered through program headquarters in Winnipeg. In addition, there are six assistant commissioners who liaise with the industry and investigate complaints concerning transactions between producers and licensed primary elevator operators.

Finance and Administration: This element coordinates and provides expert advice to the Commission on corporate planning, management of revenues and expenditures, accounting and accommodation administration. It also coordinates and provides central services.

Performance Information/Resource Justification

This Activity represents a fixed percentage of total expenditures.

Figure 16: Percentage of Total Expenditures Representative of Program Management and Finance and Administration Sub-Activities

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Program Management percentage of total expenditures	**4%**	4%	4%
Finance and Administration percentage of total expenditures	**3%**	3%	3%

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Canadian Grain Commission Program expenditures by object are presented in Figure 17. For the fiscal year 1985-86, expenditures are estimated to be $46.7 million. This represents an increase of 19% over 1984-85 forecast.

Figure 17: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	32,255	28,154	26,989
Contribution to employee benefit plans	4,446	3,961	4,141
Other personnel costs	339	320	221
	37,040	32,435	31,351
Goods and services			
Transportation and communications	2,402	2,059	1,601
Information	165	207	153
Professional and special services	258	269	149
Rentals	2,440	2,059	1,827
Materials and supplies	1,214	1,031	783
All other expenditures	3	3	1
	6,482	5,628	4,514
Total operating costs	43,522	38,063	35,865
Capital			
Construction and acquisition of land, buildings, and works	67	-	322
Construction and acquisition of machinery and equipment	3,109	1,098	919
Total capital	3,176	1,098	1,241
Transfer payments	4	109	76
Total expenditures	46,702	39,270	37,182

2. Personnel Expenditures

Canadian Grain Commission personnel costs account for 79% of program expenditures. This includes statutory contribution to employee benefit plans of $4.4 million.

Figure 18: Person-Year Requirements by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Operational					
General Labour and Trades	252	271	274	14,776 - 40,676	27,919

Note: The person-year columns display the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

The Program is directing most of its capital funds $3.2 million for 1985-86 to the automation of inspection and weighing processes, primarily for grain inspection equipment, weighscale recorders, computerized information and analysis systems and research equipment to identify mycotoxin contamination.

4. Transfer Payments

The Grain Research Activity is involved with grain quality surveys, varietal studies and performs basic and applied research to identify and better understand what "quality" is and to develop more efficient and meaningful methods of quality measurement. The Commission shares this research through the International Association of Cereal Chemists.

Figure 20: Summary of Contributions ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Membership fee in the International Association for Cereal Chemistry	4	4	3
Items not required for 1985-86			
Computerization of elevator weighing system	-	105	73

5. Revenue Analysis

The Commission endeavours to recover all operating costs with the exception of grain research, through service fees. Figure 21 provides a listing of revenue generated by the Canadian Grain Commission. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Figure 21: Revenue by Class ($000)

	1985-86	1984-85	1983-84
Grain Inspection:			
Inspection fees	20,724	17,854	20,696
Inspection overtime	550	497	688
Samples sold	46	55	82
	21,320	18,406	21,466
Grain Weighing:			
Weighing fees	12,500	12,100	11,403
Weighing overtime	500	400	414
	13,000	12,500	11,817
Grain Testing and Research:			
Miscellaneous	1	1	2
	1	1	2
Economics and Statistics:			
Registration and cancellation fees	2,868	3,109	3,336
License fees	85	105	95
	2,953	3,214	3,431
Administration:			
Miscellaneous	5	5	18
	5	5	18
Total Canadian Grain Commission Revenue	37,279	34,126	36,734

B. Cost Analysis

Net Program Cost

The 1985-86 Estimates include only those expenditures which are charged to the Department's voted appropriations and statutory payments. Other cost items as well as revenue must also be included when considering the actual costs to operate the Program.

Figure 22: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	1984-85 Forecast
Grain Inspection	21,404	347	21,751	21,320	431	18,589
Grain Weighing	11,238	196	11,434	13,000	(1,566)	9,078
Grain Testing and Research	6,668	82	6,750	1	6,749	5,170
Economics and Statistics	4,278	81	4,359	2,953	1,406	3,966
Administration	3,114	36	3,150	5	3,145	2,467
	46,702	742	47,444	37,279	10,165	39,270

The adjustments made to the budgetary expenditures to arrive at total net cost include services provided without charge by other departments, and revenues generated by the Program that are credited directly to the Consolidated Revenue Fund.

Other Costs

Other costs are services provided without charge by other Departments as follows: Supply and Services ($19K), Treasury Board ($625K) and Labour ($98K).

Atomic Energy Control Board

1985–86 Estimates

Part III

Expenditure Plan

249

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Atomic Energy Control Board

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts. It is provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section, and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $21,817,000 to carry out the planned activities of the Atomic Energy Control Board in 1985-86. Additional expenditures of $1,844,000 are forecast under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- The AECB will continue its program to regulate atomic energy with no significant change in the level of resources for nuclear facility and materials licensing actions, there being no changes anticipated in the nuclear industry. (see page 7)

- It is expected that three nuclear reactors in Ontario will be ready for start-up and will require licensing. (see page 20)

- The safety of the reactors under construction at Darlington is being examined in more detail than for previous reactors. (see page 14)

- Work will continue towards improving the regulations under which regulatory control is maintained. Two major improvements expected are the completion of regulations specific to the uranium mining industry, and extensive amendments to the existing regulations. (see page 13)

- After experiencing a growth during the past three years, expenditures on regulatory research will level off but with more emphasis on the areas of nuclear reactor safety and radiation health physics. (see page 25)

- The scope of support for international safeguards will be expanded under the terms of a recently approved Safeguards Support Program. (see page 25)

2. Financial Summary by Activity

Administration of Atomic Energy Control Regulations and Participation in Measures for International Control of Atomic Energy*	**23,661**	22,655	1,006	18
Authorized person-years	**285**	285	-	

* In previous years the AECB had two activities, Administration of Atomic Energy Control Regulations, and Special Safeguards Development. This latter activity is now called the Safeguards Support Program and has been absorbed as a sub-activity within the one activity.

Explanation of Change: The financial requirements for 1985-86 are 4.4%, or $1,006 thousand, higher than the 1984-85 expenditure forecast. This increase is primarily due to:

	($000)
• a reduction in professional and special services for the Safeguards Support Program	(554)
• a reduction in financial resource requirements for contributions (post-graduate scholarships)	(12)
• an increase in salaries and purchases due to inflation	1,159
• an increase in professional and special services for the mission-oriented research program	345
• an increase of $17 thousand in other operating costs and $51 thousand for EDP capital purchases	68

Explanation of 1984-85 Forecast: The 1984-85 forecast is $2,488,500, or 12.3% higher than the 1984-85 Main Estimates of $20,167,000. The difference is an approved Supplementary Estimate to continue the funding of the Safeguards Support Program. (See page 25)

B. Recent Performance

1. Highlights

- During 1983-84 the AECB continued to carry out its ongoing functions necessary to maintain regulatory control over nuclear facilities and materials.

- Planned increases in inspection capability were achieved in two areas through the establishment of a regional compliance office at Laval, Québec, and an increase of three person years allocated to uranium mine inspection.

- Construction of three nuclear power reactors, at Pickering and Bruce, Ontario, was completed, and the AECB monitored commissioning and issued operating licences.

- Unplanned events that required the attention of the AECB's reactor licensing and assessment staff included the rupture of a pressure tube in the Pickering A unit 2 reactor, and the decision by Maritime Nuclear to study the feasibility of building a second reactor at Point Lepreau. The former occurrence, in 1983, which led to a decision by Ontario Hydro to replace all pressure tubes in units 1 and 2 at Pickering, necessitated action by the AECB to review the implications of the failure and the proposed procedures for the complex task of replacing the tubes. In the case of Maritime Nuclear's decision, AECB staff are spending considerable effort on clarifying the safety requirements and licensing procedures.

- Expenditures on regulatory research were approximately 75% of the planned amount. The engagement of only one of the planned three extra persons, changes in emphasis of the research program, and the need for more discussion and negotiation prior to letting contracts contributed to this shortfall.

- Work to strengthen regulatory control by making regulations more precise and relevant was continued. Regulations for transport packaging were promulgated, as were amendments to the regulations to deal with radiography. Considerable discussion was undertaken with labour and industry concerning amendments proposed by the AECB to provisions in the Regulations dealing with radiation protection.

- With the hiring of a Human Factors Specialist, the AECB is now giving more consideration to this area as it relates to safety of nuclear power reactors. (see page 14)

2. Review of Financial Performance

Figure 2: Review of Financial Performance 1983-84 ($000)

Sub-Activity	1983-84 Actual	1983-84 Main Estimates	1983-84 Change
Regulation of Reactors and Accelerators	3,832	4,186	354
Regulation of Fuel Facilities and Materials	5,632	5,293	(339)
Regulatory Research	2,769	3,585	816
Safeguards Support Program	2,544	2,590	46
President's Office and Secretariat	948	1,156	208
Planning and Administration	2,900	2,886	(14)
Total	18,625	19,696	1,071
Person-Years	271	271	

Explanation of Change

1. The differences between the Main Estimates and Actual expenditures for Reactors and Accelerators ($354,000) and Fuel Facilities and Materials ($339,000) are due to a change in the cost allocation structure introduced in 1983-84. The Estimates are based on organizational units and the Actual expenditures are based on cost-allocation by Sub-activity. (see page 11)

2. The difference of $816,000 for Regulatory Research is mainly due to underexpenditure on contracted research. (see page 8)

3. The difference of $208,000 for the President's Office is mainly due to less than anticipated support to the advisory committees, and unspent funds for legal services.

C. Background

1. Introduction

The AECB, through its Atomic Energy Control Program, provides for the regulatory control of the development, application and use of atomic energy in Canada, and participates on behalf of Canada in international measures of control. The AECB achieves its control through a comprehensive licensing system that covers all aspects of nuclear facilities, prescribed substances and equipment, to assure that such facilities, substances, and equipment are utilized with proper consideration of health and safety, and security. The licensing system is administered with the co-operation of departments in such areas as health, the environment, transport and labour. This enables the concerns and responsibilities of these departments to be taken into account before licences are issued by the AECB, providing that there is no conflict with the provisions of the AEC Act and Regulations.

This control also extends to the import and export of prescribed substances and equipment, and it involves Canadian participation in the activities of the International Atomic Energy Agency (IAEA), and compliance with the requirements of the Treaty on the Non-Proliferation of Nuclear Weapons. It covers both the domestic and international security of nuclear materials and technology.

The AECB reports to Parliament through a designated Minister, currently the Minister of Energy, Mines and Resources.

2. Legal Mandate

The AECB was established in 1946 by the Atomic Energy Control Act (AEC Act). It is a departmental corporation (Schedule B) within the meaning and purpose of the Financial Administration Act. The AEC Act gives the AECB broad powers of regulation without specific definition of their application to the various activities subject to the Act.

The AECB also has the responsibility for the administration of the Nuclear Liability Act, as amended (RSC 1970 C10 2nd Supp), including the designation of nuclear installations and the prescription of basic insurance to be carried by the operators of such nuclear installations.

3. Program Objective

The program objective is to control atomic energy in the interests of health and safety and national security. See Section II, page 17, for detailed sub-objectives.

4. Program Organization for Delivery

Activity Structure: The AECB's Program has only one activity - Administration of Atomic Energy Control Regulations and Participation in Measures for International Control of Atomic Energy. For management, planning, and resource control this is broken down into six sub-activities as shown in Figure 3.

Organization Structure: The AECB staff is organized into five main organizational units each of which is accountable for one of the sub-activities, with the exception of the Regulatory Research Branch which is also responsible for the Safeguards Support Program. These organizational units might be required to contribute to sub-activities other than the one for which each is accountable.

The resource requirements for the organizational units and the distribution of resources by sub-activity is shown in Figure 3.

Figure 3: 1985-86 Resources by Organization and Distribution by Sub-activity ($000)

PRESIDENT

D. Planning Perspective and Performance Review

1. Environment

A number of factors beyond the control of the AECB have a significant effect on the nature and extent of the AECB program content:

Size and Performance of the Nuclear Industry: Since the primary role of the AECB is to regulate nuclear activities and ensure that they are carried out safely, the size of the nuclear industry is a key factor that determines the AECB's activities and resource needs. The AECB must respond promptly to requests by applicants for licences, and its resource needs are therefore related to the number of nuclear facilities and users of nuclear materials. The AECB must also plan for demands due to anticipated changes in the nuclear industry.

The performance of licensees also affects the AECB resource needs; any major deviation from normal performance (e.g. a serious accident) would necessitate intensified activity by the AECB.

International Involvement: Since nuclear energy is an international technology, involvement in international affairs must be considered in the AECB's planning. It is necessary to participate closely in activities of international agencies, in particular the International Atomic Energy Agency (IAEA), the Nuclear Energy Agency of the OECD, the International Commission on Radiological Protection (ICRP), and other such bodies that are concerned with the peaceful use of nuclear energy, the development of appropriate standards for health and safety, international safeguards, and the physical protection of materials and nuclear facilities. Because of Canada's long-standing support of the IAEA and of the importance attached to its safeguards activities, the AECB alternates with Atomic Energy of Canada Ltd. in providing a special Nuclear Science Counsellor who is seconded to the Canadian Embassy in Vienna, Austria. The AECB must also maintain liaison through External Affairs with countries having bilateral arrangements with Canada, as well as with regulatory agencies in other countries concerning matters of mutual concern. The AECB also provides technical advice to External Affairs.

Intragovernmental and Intergovernmental Arrangements: An important factor bearing on AECB operations lies in the field of intragovernmental and intergovernmental cooperation within Canada. Certain federal departments, particularly Environment, Health and Welfare, Transport and Labour have interests in areas closely related to those of the AECB. On the intergovernmental side, the relation between federal and provincial legislation, plus the need to keep responsibilities clearly defined and to avoid duplication of effort, necessitate continuous discussion on many aspects related to control of the nuclear fuel cycle.

Public Concerns: There is widespread public concern about several issues such as the impact of the nuclear fuel cycle on the natural environment, the capability to manage radioactive wastes, the adequacy of safety precautions and engineering at nuclear facilities, and the possibility of serious accidents. These concerns, which are often discussed in a confrontational atmosphere, involve public utilities and other agencies as well as the AECB. The AECB must respond to these concerns by making information available, and by meeting with individuals and groups. Such dialogue is encouraged informally but also formally under a published policy relating to appearances before and representations to the Board.

Availability of Expertise: Nuclear energy is a sophisticated, complex, and relatively new technology. To regulate the nuclear industry effectively the AECB needs technical experts in many specialized scientific and technical fields. During its period of expansion to meet the demands of the expanding nuclear industry, the AECB had to take steps to ensure that it could hire or train persons with required expertise who were not readily available from the conventional human resource supply pool. With the growth of the nuclear industry levelling off, it now becomes necessary for the AECB to anticipate the longer term expertise needs so that it can respond to any future changes or new directions of the industry, and ensure that it has the appropriate resource skills at the right time.

Regulatory Reform: As a federal regulatory agency, the AECB must respond to government initiatives and directives relating to legislative reform. It must continue therefore to publish its proposed regulatory initiatives to allow for public consultation in its regulatory process, and it must keep the public fully informed as to its regulatory actions and decisions. New regulations or revisions to regulations concerning health and safety must be subjected to the Socio-Economic Impact Analysis process described in Chapter 490 of the Treasury Board administrative policy manual.

2. Initiatives

There are no new major initiatives planned for 1985-86.

3. Update on Previously Reported Initiatives

The following actions have been carried out to pursue initiatives planned for 1983-84.

New or Revised Regulations: Regulations and amendments have been promulgated concerning packaging for transportation, and sections of the Regulations dealing with radiography. Regulations concerning physical security went into effect. Proposed amendments to the Regulations concerning radiation protection provisions, and regulations specific to uranium mining have been issued for public comment, and

this has resulted in considerable discussion and communication between the AECB and interested parties (labour, industry, other federal and provincial government departments and agencies, and the public). Work will continue in 1985-86 with a view to finalizing these and also to bring about general amendments to the AECB Regulations. The proposed radiation protection regulation amendments have been absorbed into these general amendments.

Compliance Inspection: Increased inspection capability has been achieved by the establishment of a regional compliance office at Laval, Québec, and by the assignment of three additional persons for uranium mine inspection, two of whom are located at the Elliot Lake, Ontario, site office. With the full benefit of regional offices, inspections of radioisotope licensees will increase in 1985-86 with no increase in staff.

Safety Evaluation: A specialist in Human Factors has been hired. Emphasis has been and will increasingly be put on special safety systems, emergency power systems, and reliability analysis of power reactors, with particular application to the reactors under construction at Darlington.

4. Program Effectiveness

The effectiveness of the AECB in meeting its objective can be partially gauged by results in several key areas. In all of these it is important to recognize that success in meeting regulatory requirements is not a measure of AECB action alone. The AECB produces regulations and guidelines for meeting them, and inspects to ensure compliance, but the success in protecting workers and the public, and in security, is also influenced by licensee's efforts, by provincial government and federal government actions, and by the cooperation extended by labour.

In its regulations the AECB specifies the maximum radiation exposure levels considered acceptably safe for workers and the public. However, in granting licences the AECB requires that the normal operation of nuclear facilities and activities shall result in radiation doses less than the maximum permissible, and that doses are "as low as reasonably achievable, social and economic factors being taken into account" (ALARA principle). The dose limit for workers is 50 millisieverts per year, and for the public one-tenth of this. Uranium mine and mill workers are also subject to an annual exposure limit for radon daughters of 4 working level months.

In the case of heavy water plants, the primary hazard is the hydrogen sulphide gas used in large quantities in these plants. The gas is highly toxic, and exposure of the worker and emissions from the plant are controlled to very low levels.

Protection of Workers: The AECB requires workers to be monitored individually for exposure to radiation, or the determination of exposures by monitoring the workplace. Thus the success in achieving protection of the workers can be partially measured by how few workers receive an exposure in excess of that permitted, and by total worker doses. Figure 4 shows data for nuclear facilities and material use, and Figure 5 shows specific data for uranium mines and mills.

Figure 4: Success in keeping worker exposure below statutory limits

Type of Nuclear Activity	Workers receiving more than 50 millisieverts (mSv) whole body dose		
	1981-82	1982-83	1983-84
Nuclear Reactors - Power	0	0	0
- Research	0	0	1
Accelerators	0	0	0
Fuel Plants & Refineries	0	0	0
Waste Management	0	0	0
Radioisotopes	19	5	6

Figure 5: Number of Ontario Uranium Mine/Mill Workers with Recorded Exposures above Guidelines (pre-1978) or Standard (post-Jan. 1978)(dosimetry year is calendar year)

Year	1977	1978	1979	1980	1981	1982	1983
Number	61	7	0	0	2	0	0
Approximate number of miners	3,500	4,300	4,600	4,800	5,100	5,100	5,500

Protection of the Public: In the case of the public, for which the maximum permissible radiation dose is one-tenth that for a worker, the protection is achieved by the AECB requiring that the radioactive material or radiation resulting from the operation of a nuclear facility or use of radioactive substances be contained, and that any

emission directly or through the environment be sufficiently low that the public will not receive unnecessary or excessive radiation. In this case also the AECB requires that the ALARA principle be applied to keep any exposures as low as reasonably achievable.

In the case of power reactors, the AECB has established design and operating targets for nuclear generating stations with respect to the protection of the public from radioactive releases. The goal of these targets is to keep the releases from exceeding 1% of the derived release limit. (The derived release limit is the calculated quantity which, if emitted constantly from a nuclear facility, could result in an annual radiation dose equal to the regulatory dose limit for members of the public nearby.) It can be seen from figure 6 that, although the general trend has been downward to below the target, at certain stations the target was exceeded in 1982 and 1983. The AECB has instructed Ontario Hydro to take steps to correct the situation to keep the releases within target.

Figure 6: Radioactive releases from nuclear power reactors (expressed as percentage of the derived release limit)

During 1983-84, there were no failures at any nuclear reactor that resulted in a significant release of radioactive materiel to the environment.

Section II
Analysis by Activity

A. Administration of Atomic Energy Control Regulations and Participation in Measures for International Control of Atomic Energy

Objective

To control atomic energy in the interest of health and safety and national security.

From a planning and control aspect this activity is divided into six sub-activities, the objectives of which are the sub-objectives of the activity, as follows:

- To ensure that workers and the public are adequately protected against undue exposure to radiation from nuclear reactors and accelerators.

- To ensure that workers and the public are adequately protected against undue exposure to radiation and toxic substances resulting from production, use, possession, sale, and transportation of prescribed substances, and to participate in international measures of control of atomic energy.

- To provide, by contracted research, information needed by the AECB in support of its regulatory activities and its regulatory decisions; to ensure that the AECB has adequate information on which to base its radiation protection standards; and to ensure that the AECB's regulatory requirements are adequately documented, and that there is provision for public consultation prior to promulgating such requirements.

- To assist, influence, and improve the effectiveness of the International Atomic Energy Agency (IAEA) through the provision by Canada of technical assistance and other resources.

- To provide support services for the five member Atomic Energy Control Board and the Board's two Advisory Committees, and to ensure that the public and elected officials are adequately informed on matters relating to the AECB's regulatory activities.

- To provide institutional services including corporate management, finance, personnel, planning and coordination, and information management; provide both organizational administration and direction concerning policy; and to act as a liaison channel between the AECB and other governments and agencies; and to administer certain provisions of the Nuclear Liability Act.

Resource Summary

Figure 7: Expenditures ($000) and Person Years

Sub-Activity	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Total	23,661	285	22,655	285	18,625	271

Figure 8: Forecast Distribution of AECB Staff Time

Description

Regulation of Reactors and Accelerators: This sub-activity is responsible for all regulatory aspects necessary to protect workers and the public against undue exposure to radiation that is related to nuclear reactors, including both research and commercial operations, and particle accelerator facilities. Regulation involves the evaluation of applications for licences against safety standards and requirements set by the AECB, the issuance of licences, the surveillance of licensees' operations to ensure compliance with regulations, and the approval of the training of reactor operators.

Regulation of Fuel Facilities and Materials: This sub-activity is responsible for all regulatory aspects necessary to protect workers and the public against undue exposure to radiation in connection with uranium mining, milling and refining, fuel fabrication, heavy water production and radioactive waste management. This regulation involves similar actions to those listed for reactors above. The sub-activity is also responsible for all regulatory aspects relating to the possession, use and sale of nuclear materials, i.e. uranium, thorium, heavy water, and radioisotopes, and their safe packaging for transportation, to protect the worker and the public against undue hazards from these materials.

In addition to its regulatory component, this sub-activity is also charged with ensuring compliance with international safeguards and physical security requirements, and for cooperative arrangements with the International Atomic Energy Agency in accordance with Canada's safeguards agreement with the Agency.

Regulatory Research: This sub-activity is responsible for ensuring that information needed by the AECB for its regulatory actions, and not available in-house, is obtained by contracted research in subject areas related to the regulatory process. These subject areas fall into groupings which relate to the various types of nuclear facilities and the use and transportation of nuclear materials; radioactive waste management; health physics; the regulatory process and regulations; and security. This sub-activity is also responsible for the assessment of radiological hazards of licensable operations and of radiation protection devices developed to protect against these hazards, for setting radiation protection standards, and for the development of an improved regulatory document system.

Safeguards Support Program: This sub-activity provides for the AECB's contribution, jointly with Atomic Energy of Canada Ltd. (AECL), to a Canadian program to support international safeguards. The support program initially approved in 1977 was renewed in 1984 with the objective of providing support to the IAEA by providing cost free experts; completing the development, provision and installation of equipment in CANDU reactors as mandated in the 1977 program; providing

services and material to the IAEA; developing safeguards systems for existing and future CANDU reactors not included in the 1977 program, as well as bulk handling nuclear facilities; and providing general assistance.

President's Office and Secretariat: This sub-activity includes overall responsibility for the implementation of AECB policies and activities, secretariat services for the five-member Atomic Energy Control Board, parliamentary liaison, public information, and administrative support for independent advisory committees.

Planning and Administration: In addition to the normal administration functions, and international and intergovernmental coordination, this sub-activity is responsible for administration of the Nuclear Liability Act, including designation of "Nuclear Installations" and prescribing appropriate insurance coverage.

Performance Information/Resource Justification

Regulation of Reactors and Accelerators: Control over reactors and accelerators is maintained through the issue of licences, and through subsequent inspection carried out to ensure compliance with regulations and with licence terms and conditions. The steps involved in the licencing process for reactors and accelerators are summarized in Section III, page 30. The resources for this sub-activity are highly dependent on the performance and size of the Canadian industry. It is expected that in 1985-86 three more power reactor units will be ready for start-up, and construction could be underway on a second reactor at Point Lepreau. In addition, construction of four reactors at Darlington will be continuing.

Figure 9 gives a breakdown of the number of units presently in operation, under construction, or planned, and the licences for them.

Figure 9: Reactor and Accelerator Units and Licenses

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	No. of Units	No. of Licences*	No. of Units	No. of Licences*	No. of Units	No. of Licences*
Power Reactors						
Operational	16	7	14	9	12	7
Non-operational	4	2	4	2	3	1
Under construction	6	3	8	4	10	3
Pre-construction	0	0	0	0	1	0
Research Reactors	16	12	15	12	15	12
Accelerators	68	56	65	53	63	51

* Some licences cover more than one reactor unit or accelerator.

In 1985-86, in order to maintain regulatory control over reactors and accelerators, 78 person years will be required, no increase from 1984-85. The estimated number of licensing actions and compliance activities that will be carried out is given in figures 10 and 11.

Figure 10: Number of Licensing Actions

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Power Reactors				
Site Approvals	0	0	0	0
Construction Authorizations	0	1	0	0
New Operating Licences*	3	2	1	1
Operating Licence Renewals	7	5	1	3
Possession licences issued or renewed	1	2	0	0
Research Reactors, Particle Accelerators and Other Facilities				
New licences	9	11	7	8
Licence renewals	35	27	19	24

* includes licence actions to permit additional unit(s) to operate under existing licence

Figure 11: Compliance Activities

	No. of inspection visits		
	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Power Reactors	25*	25*	25*
Research Reactors	16	19	8
Particle Accelerators	23	32	25
Other (AECL) Facilities	4	4	3

* In addition to these inspection visits by AECB off-site staff, there are 19 staff located at reactor sites and design offices whose role is to monitor design, construction and operation of the reactors on a day-to-day basis.

Regulation of Fuel Facilities and Materials: Control over uranium mines and mills, refineries, fuel fabrication plants, heavy water plants, facilities for the management of radioactive waste, and the possession, use, and sale of nuclear materials is, as for reactors, maintained through the issue of licences and subsequent inspection actions to ensure compliance with the Regulations and with licence terms and conditions. The steps involved in the licensing process for the above facilities and for nuclear materials are summarized in Section III, page 31. As with reactors the resources required for this sub-activity are highly dependent on the nuclear industry in Canada, but another major influence is the extent of the uranium export business. Figures 12 and 13 give a breakdown of the number of nuclear facilities and material licences.

Figure 12: Number of Nuclear Facility Licences

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Uranium Mines/Mills			
Operating	9	8	8
Under development	3	4	5

Prescribed Substances	38	36	41
Radioisotopes	4,800	4,767	4,796

In 1985-86, in order to maintain regulatory control over fuel cycle facilities and nuclear materials, 112 person years will be required, no increase from 1984-85. The estimated number of licensing actions and compliance activities that will be carried out is given in figures 14-16.

Figure 14: No. of Licensing Actions

Figure 16: Compliance Inspections

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Uranium Mines/Mills	405	390	350
Waste Management Facilities	89	69	56
Refineries & Fuel Plants	42	42	42
Heavy Water Plants	18	18	18
Prescribed Substances	19	18	20
Radioisotopes	3,000	2,600	2,400

Regulatory Research: The AECB's contract research is administered by specialist staff who identify projects, select contractors, follow the work as it develops, and interpret results for AECB use in licensing matters. The costs of research projects, almost all of which are contracted out through the Department of Supply and Services, are shown in Figure 17, grouped by mission.

Figure 17: Research Costs by Mission ($000)

Mission	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Nuclear reactors	1,050	955	505
Heavy water production plants	110	100	95
Uranium mines and mills	440	400	279
Other fuel cycle facilities	275	250	94
Waste management	505	460	415
Non fuel cycle applications	115	105	89
Transportation	65	60	100
Health physics	550	500	285
Regulations and regulatory process development	60	53	15
	3,170	2,883	1,877

The 1983-84 expenditure represented work on 54 research projects of which 30 were completed. There are 100 planned projects in 1984-85, and the number of projects expected in 1985-86 will remain about the same. During 1984-85, a trend towards relatively fewer, but larger cost, projects in spite of an increase in expenditure, started and is expected to continue, with more emphasis on nuclear reactor safety and radiation health physics. In addition to administering the mission-oriented research program, AECB staff also carry out specialized assessments in support of licensing. A total of 28 person years will be needed in 1985-86, no increase from 1984-85.

Safeguards Support Program: This sub-activity provides for the AECB's contribution, jointly with Atomic Energy of Canada Ltd., to a Canadian program to support IAEA safeguards. This is accomplished by jointly funding various tasks of research and development, the acquisition, installation and testing of equipment, and other tasks of a more general nature in support of IAEA safeguards.

With the renewal of the 1977 program in 1984, the scope of the program has been expanded to cover safeguards approaches and equipment development for existing and planned CANDU reactors not included in the 1977 program, and also for bulk handling facilities. In 1985-86 there will be two person years allocated to this program.

By 1984-85, the Safeguards Support Program was well advanced towards its original objective of developing, manufacturing and installing a fully-instrumented safeguards system for CANDU-type reactors. Full systems had been installed on behalf of the IAEA in four CANDU-600 reactors in Canada and abroad. Technical advice and some equipment had also been provided to the IAEA for one other CANDU reactor abroad.

Liaison and transfer of technology to the IAEA has been expedited by four experts who were provided to the IAEA on a no-cost basis.

Even though problems developed that necessitated some re-design of safeguards equipment, the equipment substantially improved the confidence in the ability of the IAEA to draw safeguards conclusions.

A. Analysis by Object

1. Expenditures by Object

Figure 18: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	13,189	12,280	10,156
Contributions to the Employee Benefit Plans	1,844	1,583	1,475
Other personnel costs	36	35	128
	15,069	13,898	11,759
Goods and Services			
Transportation and communication	1,551	1,613	1,283
Information	103	107	88
Professional and special services	4,318	3,983	2,265
Safeguards Support Program	1,298	1,863	2,470
Rentals	141	135	64
Purchased repair and upkeep	125	87	116
Utilities, materials and supplies	273	242	238
All other expenditures	1	2	2
	7,810	8,032	6,526
Total operating	22,879	21,930	18,285
Capital	291	245	318
Transfer payments	491	480	22
Total expenditures	23,661	22,655	18,625

2. Personnel Expenditures

Figure 19: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	25	25	22	57,111-83,520	65,784
Scientific, Technical and Professional	198	198	188	27,586-57,110	49,668
Administrative Support	62	62	61	12,845-27,585	21,738

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Grants to support non-profit organizations which are furthering the development of nuclear safety standards.	**10**	10	6
Contributions			
Contributions in the form of post-graduate scholarships to assist in recruiting persons for scientific posts	12	24	16
Contributions to the IAEA are to be used to maintain the Cost-Free Manpower Assistance Program, to procure related goods and services required to execute the Canadian Support Program for the IAEA.	**469**	446	--
Total	**491**	480	22

B. **Cost Analysis**

Figure 21: Net Cost of Program for the Year 1985-86 ($000)

	1985-86 Operating Expen-ditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Total 1984-85
Atomic Energy Control	23,661	1,814	25,475	--	25,475	21,670

"Other Costs" include services provided without charge by other departments such as accommodation charges for Public Works Canada ($1,596,000), services provided by Supply and Services Canada ($26,000) and the employer's share of insurance premiums and costs ($192,000) paid by the Treasury Board.

C. Additional Information

1. Description of AECB Comprehensive Licensing System

The AECB achieves its control through a comprehensive licensing system that covers all aspects of nuclear facilities, prescribed substances and equipment to assure that such facilities, substances, and equipment are utilized with proper consideration of health, safety and security. The licensing system is administered with the co-operation of departments in such areas as health, the environment, transport and labour. This enables the concerns and responsibilities of these departments to be taken into account before licences are issued by the AECB, providing that there is no conflict with the provisions of the AEC Act and Regulations.

This control also extends to the import and export of prescribed substances and equipment. It involves Canadian participation in the activities of the International Atomic Energy Agency (IAEA), and compliance with the requirements of the Treaty on the Non-Proliferation of Nuclear Weapons. It covers both domestic and international security of nuclear materials and technology.

There are two types of licences issued by the AECB, facility licences and nuclear material licences.

Nuclear Facility Licences: By definition in the AEC Regulations, nuclear reactors, sub-critical nuclear reactors, particle accelerators, uranium and thorium mines and mills, plants for the separation, processing, reprocessing or fabrication of fissionable substances, plants for the production of deuterium or deuterium compounds, and facilities for the disposal of prescribed substances, are nuclear facilities and as such can be operated only in accordance with a licence issued by the AECB.

Before the AECB issues a licence to operate a facility, the applicant must meet criteria established by the AECB for the siting, construction, and operating stages. The AECB evaluates information that is provided to it by the applicant in support of the application concerning the design, and the measures to be adopted to ensure that the facility will be constructed and operated in accordance with acceptable levels of health, safety and security.

Throughout the lifespan of the facility, the AECB monitors its operation to verify that the licensee complies at all times with the AEC Regulations and the conditions of the licence.

At the end of its useful lifespan, a facility must be decommissioned in a manner that is acceptable to the AECB and, if required, the facility site must be restored to unrestricted use, or managed until the site no longer presents a hazard to health, safety, or security.

Nuclear Material Licences: There are two types of licences for nuclear materials: Prescribed Substances Licences for uranium, thorium and heavy water; and Radioisotope Licences for radioisotopes that are widely used in medicine for diagnostic and therapeutic purposes, and in industry for radiography, gauging, static elimination, oil well logging and industrial irradiators. Licences are issued for the use or possession of these nuclear materials.

The use of nuclear materials, in particular radioisotopes, is widespread across Canada. In order to ensure that the materials are transported safely, it is the responsibility of the AECB to regulate the packaging of such materials for shipment. The regulation of the transportation itself is the responsibility of other government agencies.

All licences are issued for a limited period of time, normally 1 to 2 years, being renewed on evidence that operation or use continues to be satisfactory. After licences have been issued, the AECB carries out an extensive compliance inspection program to ensure compliance with the Regulations and licence conditions.

Although the AECB does not hold public hearings as part of its licensing process, the public and interested parties have an input into its regulatory requirements setting process through a public consultation process.

Auditor General of Canada

1985–86 Estimates

Part III

Expenditure Plan

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Auditor General
of Canada

Preface

This Expenditure Plan is designed to be used as a reference document and, as such, contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into two sections. Section I presents an overview of the program, including a description, background information, objectives and planning perspective, as well as information that forms the basis for the resources requested. Section II provides further information on costs and resources and special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $39,045,000 in support of the 1985-86 Auditor General. The remaining expenditures, estimated at $3,923,000 for contributions to employee benefit plans and the salary of the Auditor General will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

- During 1984-85, the Office was reorganized to consolidate all audit responsibility under one Branch (see page 12).
- As a result of audit responsibilities for Crown corporations conferred under amendments to the Financial Administration Act and coming into force in September 1984, the Office is requesting an additional $788,000 (see page 18).
- An additional $1,219,000 is required to expand the Office's EDP auditing capabilities (see pages 18 and 19).
- Planned person-years are increased by 19 to 659 in order to discharge new Crown corporation audit responsibilities and to expand the Office's EDP auditing capabilities (see pages 18, 19 and 23).
- During 1985-86, the Office plans to carry out 223 audits (1984-85: 204) at a total cost of $43 million (1984-85: $40.6 million) (see page 21).

B. Financial Summary

Figure 1: Financial Summary

	Estimates 1985-86	Forecast 1984-85	Change $	Change %
Legislative Auditing ($000)	42,968	40,245	2,723	6.8
Planned person-years	659	640	19	3.0

Explanation of change:

- The increase of $ 2.7 million in the 1985-86 requirements over the 1984-85 Forecast is due to the impact of inflation on salaries, employee benefits, goods, services and contribution, as well as additional work to be carried out in Crown corporations as a result of amendments to the Financial Administration Act, and, to increase EDP audit capability.

- The increase of 19 person-years is required to discharge new Crown corporation audit responsibilities and to expand the Office's EDP audit capability.

C. Background

1. Introduction

The Office has a unique position within the federal government structure. The fact that it is part of the legislative branch allows the Office to carry out its work independently of the Government of the day. The principal raison d'être of the Office is to serve the needs of the House of Commons. Accordingly, the products of the Office, its various opinions and reports, are produced for direct use by the House of Commons in its scrutiny of government programs and financial activities. The Office is directly accountable to the House of Commons, through the Public Accounts Committee, for providing audit information that is significant, timely and produced in a cost-effective manner. The Auditor General Act requires the Auditor General to report to the House of Commons anything that he thinks is significant and of a nature that should be brought to its attention. The Act also establishes his right to the information he needs to carry out his work and confirms his position as a servant of Parliament, to which he is answerable. In addition to these distinguishing characteristics, the Office is a separate employer under the Public Service Staff Relations Act. It is also exempt from allotment controls in respect of appropriations.

The responsibilities of the Office have changed a number of times during its history. One of the more recent changes occurred in 1977 with the enactment of the Auditor General Act. This change significantly broadened the scope of the work of the Office and introduced the requirement to report to Parliament on value-for-money considerations. Accordingly, the Office developed the concept and approach of "comprehensive auditing" to meet the requirements of the new Act. Comprehensive audits of departments and agencies are reported in the Auditor General's annual Report to the House of Commons.

A further change in responsibilities occurred in September 1984, when amendments to the Financial Administration Act, dealing with the control and accountability of Crown corporations, came into effect. In addition to providing opinions on the financial statements and on compliance with authorities in those Crown corporations of which he is the appointed auditor, the Auditor General will now also be required to:

- report, when required to do so, on the accuracy and consistency of quantitative performance information contained in Crown corporations' annual reports;
- attest to the accuracy of quarterly reports, submitted by Treasury Board to Parliament, concerning the timely tabling of annual reports and summaries of corporate plans and budgets;
- at least once every five years, conduct a special examination (a review of financial and management control and information systems and management practices) in as many as 33 Crown corporations; and
- consult with other auditors carrying out audits and special examinations of Crown corporations with respect to any matter which, in the opinion of such other auditors, should be brought to the attention of Parliament.

Furthermore, as a result of the amendments, the Auditor General will be the sole or joint auditor of an additional 10 corporations on and after January 1, 1989. It is likely that these appointments will be phased in over the next several years.

2. Legal Mandate

The Auditor General's mandate is set out in the Auditor General Act, 1977 and in Part XII of the new Financial Administration Act. The key provisions of these Acts are stated in Section II of this document. (See pages 28 to 30.)

3. Program Objective

The objective of the Auditor General is to provide appropriate audit information for use by the House of Commons in its scrutiny of government programs and financial activities.

4. Program Description

Legislative Auditing Activity: This activity includes the audit of the accounts of Canada, certain Crown corporations and other entities to meet legislative reporting requirements. This includes providing audit opinions on the summary financial statements of Canada and of certain Crown corporations and other entities and bringing to the attention of the House of Commons anything that the Auditor General considers to be significant.

The Legislative Auditing Activity consists of three sub-activities, described below.

Audits: This sub-activity includes all the audit work done by the Office. Each year, the Office conducts audits in departments and agencies. A major purpose of these audits is to enable the Auditor General to express an opinion on the summary financial statements of the Government of Canada. This annual work is carried out in accordance with generally accepted auditing standards. It includes various inquiries and tests of financial transactions, systems and controls and any other procedures considered necessary to enable the Auditor General to express his opinion on the government's summary financial statements.

Annual audits also assess departmental and agency compliance with legislative authority. Significant matters arising from the annual audit work are investigated and, as required by section 7(2) of the Auditor General Act, are reported to the House of Commons through audit notes in the Auditor General's annual Report.

The Auditor General also audits many Crown corporations and other entities. Annual audits support the Auditor General's opinion on the financial statements of these corporations.

Beginning in 1984-85, as a result of amendments to the Financial Administration Act, the Auditor General is required to report on quantitative information in Crown corporations' annual reports where he is the auditor. Another significant feature of these legislative changes requires the conduct of periodic special examinations in Crown corporations. Such special examinations are for the purposes of determining whether the systems and practices were maintained in such a manner as to provide reasonable assurance that the assets of the corporation and each wholly-owned subsidiary were safeguarded and controlled, the financial, human and physical resources of the corporation and each wholly-owned subsidiary were managed economically and efficiently, and the operations of the corporation and each subsidiary were carried out effectively.

The Auditor General reports the results of special examinations of those Crown corporations listed in Part I of Schedule C of the Financial Administration Act to the board of directors of the corporation, and, where he considers it appropriate, will report items of significance to the House of Commons.

Another part of the work carried out by the Office involves expressing annual audit opinions on the financial statements of the Yukon Territory and the Northwest Territories. The Auditor General is the auditor for these territories and conducts audit work for these governments and their related corporations.

Finally, on an annual basis, the Office carries out other audit work to provide audit opinions on financial statements or to issue other reports. For example, the Auditor General audits international organizations such as the International Civil Aviation Organization and the Northwest Atlantic Fisheries Organization.

In addition to carrying out the annual audits described above, the Auditor General conducts other audits in departments and agencies to fulfil the reporting requirements of section 7(2) of the Auditor General Act. An important focus of these audits is the consideration of value for money. Accordingly, cases are reported where departments or agencies have made expenditures without due regard to economy and efficiency, or where satisfactory procedures have not been established to measure and report the effectiveness of programs. The Office intends to carry out such audits in each major government entity and report the results at least once every five years. The Office also conducts audits on a government-wide basis when it is feasible and appropriate to examine issues common to a number of entities by means of a single audit project. Observations and recommendations resulting from these audits are reported in the Auditor General's annual Report.

Audit work is also conducted at the request of the Governor in Council on any matter relating to the financial affairs of Canada or to public property. As an example, the Auditor General audits the Oil Pricing and Compensation Programs.

Organizations audited receive management letters, when appropriate, that provide more detailed information to assist the entity in remedying deficiencies identified during the audit.

Professional and Methodology Development: This sub-activity is carried out in support of the Audits sub-activity and is intended to ensure the quality and consistency of audit work. Professional Development includes the training of staff and students in five broad areas -- accounting, EDP auditing, comprehensive auditing, management and communications, and orientation to the Office. Methodology Development includes developing and maintaining audit policies, managing the development of auditing methodology and conducting audit research.

Expenditures under the Professional and Methodology Development sub-activity also include the Office Library, which was previously reported under the Management Support sub-activity, and, the Office's annual contribution to the Canadian Comprehensive Auditing Foundation.

Management Support: This sub-activity includes the central support services in the areas of finance and administration, contract administration, personnel, and official languages. Also included under Management Support are the provision of direct support to the Auditor General; program evaluation and internal audit; writing, editing, and publishing information bulletins; and liaison with international and provincial Auditors General and other professional institutes and associations.

Expenditures under the Management Support sub-activity include the Office's annual grant to the International Organization of Supreme Audit Institutions. (See Section II, page 25, for details.)

5. Program Organization for Delivery

Activity Structure: The Legislative Auditing Activity consists of three sub-activities that best reflect how the Office of the Auditor General is working to meet its stated objective. An outline of the three sub-activities is presented in Figure 2.

Figure 2: Activity Structure

Organization Structure: During 1984, the Office was reorganized from four into three Branches as indicated in Figure 3. In addition to its Ottawa headquarters, Audit Operations has regional offices in Halifax, Montreal, Toronto, Winnipeg, Regina, Edmonton and Vancouver.

Audit Operations Branch: This is the largest Branch. During 1984 all audit activities of the Office were consolidated under this Branch. The Branch is now organized on an 'Audit Group' basis. This new basis provides an opportunity to more effectively utilize audit personnel on audit functions that have similar objectives, activities or linkages among government programs. Each Audit Group is the responsibility of an Assistant Auditor General or a Deputy Auditor General. The major responsibility of the Branch is to plan, conduct and report audits carried out in departments, agencies, certain Crown corporations and other entities. The staff located in the regional offices audit government organizations that have their headquarters in regional centres or that administer major portions of their programs in the region.

Professional Services Branch: As a result of reorganization in 1984, this Branch has now assumed most of the functions previously carried out by the Executive Office. It now includes the Office Library which was previously under Administrative Services Branch. The Branch provides professional support to Audit Groups and plays an important role in developing comprehensive audit methodology. It is responsible for the editorial review, translation and publishing of reports to Parliament. It provides parliamentary liaison; communications; legal advice for matters involving the Office; relations with international organizations, provincial Auditors General and other professional institutes and associations. The Branch is responsible for internal training and development and for providing related assistance to some outside organizations through the Canadian Comprehensive Auditing Foundation. In this regard, the Branch co-ordinates the Fellowship Program within the Office under which auditors and accountants from other countries are on assignment with the Office for one year.

Administrative Services Branch: This Branch provides central support services to the Office through four divisions: Finance and Administration, Contract Administration, Personnel and Official Languages.

Program Evaluation and Internal Audit: This group reports direct to the Auditor General and is responsible for evaluating the results and cost-effectiveness of the Office's program and for assessing its internal control systems and practices.

Figure 3: 1985-86 Resources by Organization/Activity

Regions		107		107
Total	59	461	139	659

* Estimated expenditures and nine person-years included in Administrative Services.

D. Planning Perspective

1. Environment

The responsibilities and authorities of the Office of the Auditor General are set out in the Auditor General Act. In its Report to the House of Commons on June 13, 1984, the Public Accounts Committee recommended that the Auditor General Act be amended to provide more frequent reporting to Parliament. This change would not increase the Office's audit work.

The factors that can significantly affect the work of the Office are:

- growth in the amount of government revenues and expenditures;
- increases in the scope and complexity of government operations and Crown corporation audit engagements;
- changes in government organization;
- changes in the nature and quality of accounting and reporting standards of the government; and
- changes in the quality of financial and management control systems in government departments and agencies, including the extent of internal auditing and evaluation.

One area where the scope of government operations has increased over the past few years is in Crown-owned entities. Moreover, as a result of amendments to the Financial Administration Act resulting from the passage of Bill C-24 effective September 1, 1984, additional responsibilities have been conferred on the Auditor General.

For example, by January 1, 1989, the Auditor General will be appointed auditor, or joint auditor, of a further 10 Crown corporations. The exact timing of these appointments, and therefore their impact on the Office's resources over the next several years, is not known at this time.

2. Initiatives

In addition to our usual audit activities, the Office has four major initiatives for 1985-86:

Crown Corporations: In 1984-85, the Office reported as one of its initiatives the need to continue to promote a better accountability framework for Crown corporations. With amendments to the Financial Administration Act coming into force on September 1, 1984, the Office will now be required to expand its audit work in those Crown corporations for which it is now, or will become, the auditor.

To prepare for these responsibilities, the Office is developing appropriate methodology and training programs and will be increasing the number of employees included in Crown corporation work (See pages 17 and 18).

Reporting: The Office will continue to promote the need for more timely reporting of comprehensive and other audits. By the time the Public Accounts Committee completes its consideration of the annual Report of the Auditor General, much of the information contained in it may be out of date. Should Parliament decide to make appropriate changes to the Auditor General Act, these changes will allow the Office to report the results of significant audits on a completion-date basis, with no additional increase in audit work to the Office.

EDP Financial Audits: Because of the increased use of computers in financial information systems, auditing of these systems requires increased knowledge and familiarity with computers. To meet the challenge of computer auditing, the Office will be initiating a program to hire additional EDP expertise and to train our professional auditors in this field. The program will require approximately 10 auditors per year to be transferred to the Computer Audit Group for training purposes. After their one-year assignment, they will be expected to return to their audit teams with the capabilities to undertake EDP systems audits (See pages 18 and 19).

OAG Organization: On September 4, 1984, the Office of the Auditor General streamlined its organization by consolidating all audit work in one Branch and establishing Audit Groups which will have continuous responsibility for various departments or subject areas. Over the next year, a number of changes will be made in the management information system to accommodate these changes.

The new organization will increase the responsibilities of Audit Groups and Assistant Auditors General to undertake audit work and enable Deputy Auditors General to devote more time to assisting the Auditor General to plan, manage and review work conducted by the Audit Operations Branch.

3. Program Effectiveness

The effectiveness of the work of the Office must be viewed in terms of its usefulness in assisting the House of Commons in the scrutiny of government programs and financial activities. The Public Accounts Committee (PAC) reviews the annual Report and selects certain sections to examine in detail. The Committee calls witnesses from the audited organizations and the Office, holds a series of hearings and, finally, reports to the House of Commons. The minutes of the hearings and the reports reflect the PAC's assessment of the significance of the matters contained in the annual Report. As well, the Committee's reports contain its recommendations on what the audited organization, central agencies or particular ministers should do in response to the Auditor General's observations.

To gauge its effectiveness, the Office carefully analyses the response of the PAC (and, indeed, of all members of the House of Commons) to the matters raised in the Auditor General's annual Report. This analysis is aimed at providing reasonable assurance to the Auditor General that matters considered by him to be significant were also viewed as such by Members of Parliament.

As well, periodic interviews are held with members and former members of the Public Accounts Committee to obtain their views on the usefulness of the information provided in the annual Report and to solicit suggestions on how the Report could be improved. For example, the members interviewed during 1981 and 1982, while expressing their basic satisfaction with the quality of the Report, were concerned about the timeliness of the audit information it contained.

As noted earlier, the Public Accounts Committee addressed this concern again during its deliberations in 1984. As a result, the Fifth Report of the PAC on June 13, 1984, recommended to the House of Commons that the Auditor General be empowered to report more often to the House of Commons. This recommendation would not increase the Office's audit work, but would allow more efficient and flexible reporting to Parliament.

Many of the matters contained in the annual Report of the Auditor General are in the nature of observed weaknesses in management systems and controls. Wherever possible, the Office makes recommendations addressing these deficiencies. Responsibility for taking corrective action lies with the management of the entity, but the Office has a professional responsibility to assess the extent to which management has responded to audit observations and recommendations. Through its follow-up work, the Office attempts to determine the degree to which reported weaknesses have been satisfactorily addressed and whether the recommendations from previous audits have produced benefits. These follow-up studies also reassess previous observations in the light of changed circumstances and clarify the status of matters previously reported in management letters.

Integral to the work of the Office are systems and controls designed to ensure adherence to professional standards in carrying out audit examinations. The audit Principal has the basic responsibility for ensuring that the audit is completed on time, within budget and according to the standards. Quality reviews are conducted by staff specialists to ensure that standards and procedures have been followed. Audit Advisory Committees provide advice to the Principals as the audits proceed. Deputy and Assistant Auditors General exercise final policy and quality control over all audits.

The audit work is also independently assessed through Post-audit Quality Reviews and feedback from audited organizations.

303

4. Performance Information/Resource Justification

The resource needs of the Office for any one year depend on two variables:

- the number, size and complexity of the individual audits to be conducted during the year; and
- for each audit, the extent of the examination that will be necessary to satisfy the Office's audit and reporting standards.

The following paragraphs briefly describe the kinds of audits that are carried out, the scope and depth associated with each, and the impact of recent events on the Office.

Since the Auditor General provides an opinion annually on the Government's summary financial statements, some audit work must be conducted in each department and agency. Moreover, the other entities on whose financial statements the Auditor General reports are also subject to annual audits. All audit examinations that lead to expressing an opinion on financial statements must be extensive enough to satisfy the requirements of generally accepted auditing standards promulgated by the Canadian Institute of Chartered Accountants that must be adhered to whenever an auditor is engaged to provide an opinion on a set of financial statements. In addition to stipulating other requirements, the standards call for an appropriately organized study, evaluation, and testing of those internal controls on which the auditor subsequently relies in determining the nature, extent and timing of auditing procedures. The Office has an established information base representing the historical costs of carrying out the work needed to express opinions on financial statements and for verifying compliance with parliamentary authority to collect revenues and make expenditures. This information facilitates the budgeting process for this part of the mandate.

With the coming into effect of the amended Financial Administration Act in September 1984, an increase in the workload of the Office has occurred. This increase results from the need to audit and report on information contained in quarterly reports submitted by Treasury Board to Parliament pursuant to Section 153.1(2); to conduct special examinations in Crown corporations at least once every five years, pursuant to Section 143; and, when required to do so, to attest to the accuracy of quantitative information contained in Crown corporations' annual reports pursuant to Section 139(1)(b).

The amended Act also has a significant impact on the required staffing and planning for its implementation. This will involve revising existing, and developing new methodologies and approaches to auditing under the new requirements of the Financial Administration Act.

The Office will absorb 25 percent of the additional person-year requirements for Crown Corporations by redeploying and increasing efficiency of existing resources. To cope with the remainder, the Office will require a budgetary increase of $788,000 in 1985-86 (including salary costs of $501,000 and nine person years).

Annual attest work will be carried out in 33 Crown corporations in 1985-86, and special examination work will be started in nine Crown corporations. Present plans call for special examinations to be completed or underway in over 30 Crown corporations by 1989-90.

As mentioned earlier, the Auditor General will be the appointed auditor or joint auditor of a further 10 Crown corporations by January 1, 1989. It is likely that such appointments will be phased in over the period to January 1, 1989, and will, depending on their timing, result in requirements for additional resources in the intervening period. However, the extent and timing of such additional requirements cannot be forecast with any accuracy at this time.

In addition to increased responsibilities in Crown corporations, the Office will be required to increase its EDP auditing capabilities. Electronic Data Processing (EDP) in society is growing at an almost exponential rate. Growth in this area is also apparent in the day-to-day operations of government. Virtually all financial systems in the government involve automation. With the advent of microcomputers and their networking capabilities, the input, processing and accessing of financial data are becoming even more decentralized and widespread throughout the government of Canada and it's Crown corporations.

Faced with auditing these increasingly sophisticated systems the Office has attempted to respond by bringing together about 20 EDP specialist auditors and technical support people into a core unit. This has not been sufficient to meet the demand for this type of work, even though it has provided a base of experience and methodology. Overall, we believe we are not today achieving an adequate quantity of audit work in this area.

As evidenced by developments in the private sector, in the United States General Accounting Office and through standards set by the Canadian Institute of Chartered Accountants, it is now recognized that in today's environment essentially every auditor must possess and be able to apply a working knowledge of EDP in auditing computerized financial systems. Large public accounting firms are spending millions of dollars to train their staff, develop audit software and supply their auditors with computers.

Accordingly, as mentioned under "Initiatives" (see page 15), in 1985-86, the Office is launching a program of intensive training in EDP auditing. This program will require training about 10 EDP audit apprentices per year, over five years.

In addition to this EDP auditor apprenticeship program, it is necessary to expand our central capability so that we can develop and give courses, provide on-the-job supervision of EDP audit apprentices, develop improved software to allow EDP equipment to aid in the conduct of audit work, provide the expanded programming support to the audit teams, and to research and introduce new EDP auditing techniques and facilities.

It is planned to phase-in most of this program over the next three years. To do this, the Office will add 25 auditors over this period. Ten auditors will be hired in 1985-86 to begin the program, at a cost of $445,000.

To support the implementation of this program, additional non-salary costs of about $774,000 will be required for:

- training courses for senior staff and line auditors;
- rental of computer time at off-site service bureaux and other government departments;
- short-term contract assistance for research and development of EDP audit tools and techniques.

As noted earlier, a number of audits carried out to meet the requirements of section 7(2) of the Auditor General Act focus primarily on identifying instances where departments and agencies have either spent money without due regard to economy or efficiency or have not established satisfactory procedures for measuring the effectiveness of programs. As the size, nature and complexity of operations vary considerably from department to department, the Office carries out analyses to identify and address the most important issues and to ensure that audit resources are applied only to matters of significance.

The Office considers all pertinent factors in deciding what to audit. The following are some of the factors that are considered:

- the significance of a program or activity in terms of the amount of expenditures or revenues, the investment in assets, or public impact;
- the extent of recent work carried out by the Office or other auditors;
- the length of time that given programs or activities have existed;
- public or parliamentary interest in an activity; and
- the opportunity to help parliamentarians in examining expenditures, revenues and operations.

These audits must be extensive enough to satisfy the standards and procedures contained in the Office's Comprehensive Auditing Manual and related Audit Guides and Accounting and Auditing Bulletins. The standards and procedures have been developed with assistance from recognized professional bodies.

Audit Principals are responsible for planning these audits and establishing budgets for them. Principals consider the cost of similar audit work done in the past, the availability of suitable methodology and skilled personnel, and the nature and significance of the potential audit issues.

To ensure that audit plans and budgets have been properly established, they are "challenged" by the Assistant Auditors General and Deputy Auditors General. The challenge process is to ensure that the Office's resource requirements are reasonable and that the audits carried out will permit the Auditor General to satisfy the requirements of his Act economically, efficiently and effectively. The resources required for a specific audit may vary considerably from initial estimates, depending on the conditions found in the audited organization. Control points throughout the audit are used to review the audit work and to reassess resource requirements and utilization.

Appropriate staff training and development are necessary to carry out audits. As auditing methods evolve and experience is gained, the knowledge must be communicated to staff. Doing so helps to ensure that they are using the latest and most effective audit techniques and that the Office receives value for the money spent on auditing.

Figure 4 shows the relationship between the number of audits planned and the resources required. (See Section II, pages 31 and 32 for the list of audits.)

Figure 4: 1985-86 Resource Requirements by Sub-Activity

	Planned no. of Audits		Main Estimates ($000)		% of Total	
	1985-86	1984-85	1985-86	1984-85	1985-86	1984-85
1. Audits						
Annual audits conducted to express an opinion on the Summary Financial Statements of Canada	86	70	10,292	8,845	23.9	21.8
Audits conducted to report section 7(2) matters (A.G. Act), with major focus on value-for-money issues	38	45	11,750	12,370	27.4	30.5
Annual audits of Crown corporations and other entities	92	88	8,958	7,865	20.8	19.3
Special examinations conducted in Crown corporations persuant to section 143 (FAA)	9	-	775	-	1.8	-
Other audit work	-	1	-	155	-	0.4
Audits sub-total	223	204	31,775	29,235	73.9	72.0
2. Professional and Methodology Development			3,928	3,250	9.2	8.0
3. Management Support			7,265	8,119	16.9	20.0
TOTAL			42,968	40,604	100.0	100.0

Notes to Figure 4:

1. The average cost of audits cannot be determined by dividing the requested resources by the number of planned audits, because many audits extend over more than one year. The total cost includes work completed during the current year, work in progress, and follow-up of previous years' work.

2. The cost shown for each area under the Audits sub-activity is based on estimates prior to starting the audit work. Actual costs may vary depending on conditions found in the audited organization.

3. During 1984 the Office was re-organized to consolidate all audit activities. As a result of this reorganization, the Office Library is now reported as part of the Professional and Methodology Development sub-activity. In 1984-85, the cost of the Library (approx. $360,000) was reported under the Management Support sub-activity.

4. Separate classification of certain audits and the addition of new audits, such as special examinations in Crown corporations, account for an increase of 19 audits over 1984-85. In addition, other audit work, listed separately in 1984-85, is now included with annual audits of Crown corporations and other entities.

Notes to Figure 6:

The OAG is a separate employer and has different classifications for management. Management also includes Executive Interchange personnel.

The person-year columns display the forecast distribution of the planned person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

The increase in person-years for 1985-86 is a result of additional audit services to be provided by the Office. These emanate from amendments to the Financial Administration Act that require the Office to expand the scope of its annual audit work in Crown corporations subject to the Financial Administration Act, as well as to implement special examinations (value-for-money audits) in these corporations. In addition, there is a requirement to expand the Office's EDP auditing capabilities.

3. Transfer Payments

Figure 7: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grant:			
International Organization of Supreme Audit Institutions	4	4	-
Contribution:			
Canadian Comprehensive Auditing Foundation	406	354	337

Grant: The International Organization of Supreme Audit Institutions (INTOSAI) is a non-governmental body open to any country which is a member of the United Nations Organization or one of its specialized and approved agencies. Its objective is to promote, between member countries, the exchange of ideas and experience in the field of public accounting and financial control. Canada is represented by the Office of the Auditor General. Membership and participation in INTOSAI carries with it an obligation to contribute financial assistance to the Organization in accordance with an orderly schedule of assessments.

Contribution: The Canadian Comprehensive Auditing Foundation, incorporated in 1980, operates as a co-operative agency in carrying out fundamental and applied auditing research and provides a forum for exchanging and disseminating comprehensive audit information among professional associations. It also acts as an advisory body to governments and provides professional development programs to teach methodology to comprehensive auditing professionals.

The contribution represents an amount equal to a sustaining membership fee for the Office of the Auditor General.

B. Cost Analysis

Figure 8: Program Costs ($000)

	1985-86 Expenditures	Other Costs to be added*	Less: Receipts Credited to Revenue	Net Total Cost	Total 1984-85
Auditor General Program	42,968	3,591	170	46,389	44,303

*Other costs consist of: ($000)

- accommodation provided without charge by Public Works; 3,096
- other services provided without charge by other departments. 495

Revenue Consists of:

- services and service fees (auditing services rendered to international organizations) $ 136
- non-tax revenue (refund of previous years' expenditure) $ 34

OFFICE OF THE AUDITOR GENERAL
1. WHERE THE MONEY GOES: PEOPLE, PLACES & THINGS

(PEOPLE = SALARIES & BENEFITS, EXECUTIVE INTERCHANGE, SHORT-TERM CONTRACTS)
(PLACES = TRAVEL & RELOCATION)
(THINGS = SUPPLIES, CONTRIBUTIONS, ETC.)

Significant Sections of the Auditor General Act Pertaining to the Mandate of the Auditor General

Section 5. The Auditor General is the auditor of the accounts of Canada, including those relating to the Consolidated Revenue Fund and as such shall make such examinations and inquiries as he considers necessary to enable him to report as required by this Act.

Section 6. The Auditor General shall examine the several financial statements required by section 55 of the Financial Administration Act to be included in the Public Accounts, and any other statement that the Minister of Finance may present for audit and shall express his opinion as to whether they present fairly information in accordance with stated accounting policies of the federal government and on a basis consistent with that of the preceding year together with any reservations he may have.

Section 7.(1) The Auditor General shall report annually to the House of Commons

(a) on the work of his office; and

(b) on whether, in carrying on the work of his office, he received all the information and explanations he required.

Section 7.(2) Each report of the Auditor General under subsection (1) shall call attention to anything that he considers to be of significance and of a nature that should be brought to the attention of the House of Commons, including any cases in which he has observed that

(a) accounts have not been faithfully and properly maintained or public money has not been fully accounted for or paid, where so required by law, into the Consolidated Revenue Fund;

(b) essential records have not been maintained or the rules and procedures applied have been insufficient to safeguard and control public property, to secure an effective check on the assessment, collection and proper allocation of the revenue and to ensure that expenditures have been made only as authorized;

(c) money has been expended other than for purposes for which it was appropriated by Parliament;

(d) money has been expended without due regard to economy or efficiency; or

(e) satisfactory procedures have not been established to measure and report the effectiveness of programs, where such procedures could appropriately and reasonably be implemented.

Section 8.(1) The Auditor General may make a special report to the House of Commons on any matter of pressing importance or urgency that, in his opinion, should not be deferred until the presentation of his annual report.

Section 11. The Auditor General may, if in his opinion such an assignment does not interfere with his primary responsibilities, whenever the Governor in Council so requests, inquire into and report on any matter relating to the financial affairs of Canada or to public property or inquire into and report on any person or organization that has received financial aid from the Government of Canada or in respect of which financial aid from the Government of Canada is sought.

Significant Sections of Part XII of the Financial Administration Act Pertaining to the Mandate of the Auditor General

Section 139.(1) Each parent Crown corporation shall cause an annual auditor's report to be prepared, in respect of itself and its wholly-owned subsidiaries, if any, in accordance with the regulations, on

(a) the financial statements referred to in Section 138; and

(b) any quantitative information required to be audited pursuant to sub-section (5).

Section 139.(2) A report under subsection (1) shall be addressed to the appropriate Minister and shall

(a) include separate statements, whether in the auditor's opinion,

(i) the financial statements are presented fairly in accordance with generally accepted accounting principles applied on a basis consistent with that of the preceding year,

(ii) the quantitative information is accurate in all material respects and, if applicable, was prepared on a basis consistent with that of the preceding year, and

(iii) the transactions of the corporation and of each subsidiary that have come to his notice in the course of his examination for the report were in accordance with this Part, the regulations, the charter and by-laws of the corporation or subsidiary and any directive given to the corporation; and

(b) call attention to any other matter falling within the scope of his examination for the report that, in his opinion, should be brought to the attention of Parliament.

Section 141.(2) On and after January 1, 1989, the Auditor General of Canada shall be appointed by the Governor in Council as the auditor, or a joint auditor, of each parent Crown corporation named in Part I of Schedule C, unless the Auditor General waives the requirement that he be so appointed.

Section 143.(1) Each parent Crown corporation shall cause a special examination to be carried out, in respect of itself and its wholly-owned subsidiaries, if any, to determine if the systems and practices referred to in paragraph 138(1)(b) were, in the period under examination, maintained in a manner that provided reasonable assurance that

(a) the assets of the corporation and each subsidiary were safeguarded and controlled; and

(b) the financial, human and physical resources of the corporation and each subsidiary were managed economically and efficiently and the operations of the corporation and each subsidiary were carried out effectively.

Section 143.(2) A special examination shall be carried out at least once every five years and at such additional times as the Governor in Council, the appropriate Minister or the board of directors of the corporation to be examined may require.

Section 145. The auditor or examiner of a Crown corporation may at any time consult the Auditor General of Canada on any matter relating to his audit or special examination and shall consult the Auditor General with respect to any matter that, in the opinion of the auditor or examiner, should be brought to the attention of Parliament pursuant to paragraph 139(2)(b) or subsection 143(10) or (11).

Section 153.1(1) The President of the Treasury Board shall cause to be laid before each House of Parliament a copy of a report indicating, in respect of each quarter of each calendar year, the summaries and annual reports that under this Part were to be laid before that House in the quarter, the time at, before or within which they were to be laid and the time they were laid.

Section 153.1(2) The accuracy of the information contained in each quarterly report shall be attested by the Auditor General of Canada in his annual report to Parliament.

In addition to the above, it should be noted that to the extent he considers practicable, the Auditor General will rely on the internal audit of the corporation being audited.

TOTAL NUMBER OF AUDITS:	85	36	52

In addition to the above audits, Special Examinations will be started in nine Crown corporations.

* AUDIT TYPE

1. Annual Audits conducted to express an opinion on the Financial Statements of Canada
2. Audits conducted to report matters with major focus on value-for-money issues (sec. 7(2)).
3. Annual Audits of Crown Corporations and other Entities

Canada Labour Relations Board

1985–86 Estimates

Part III

Expenditure Plan

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canada Labour Relations Board

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts. This is provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more detail on items of particular interest.

Appropriation Authority

The Canada Labour Relations Board requests authority to spend $5,419,000 on its operations during the 1985-86 fiscal year. The remaining expenditures, estimated at $562,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The following goals have been established for 1985-86:

- to reduce the present backlog of cases which has been rising drastically in the last three years (see page 13);
- to finalize the development and implementation of an automated case management and information retrieval system (see page 13);
- to provide for more effective processing of applications and complaints at the investigation and mediation stages (see page 13).

2. Financial Summary

Funding requirements for the Canada Labour Relations Board for both the Estimates and the current fiscal year are presented in Figure 1.

Figure 1: Financial Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Canada Labour Relations Board	5,981	5,982	(1)
Authorized person-years	104	104	-

Explanation of 1984-85 Forecast: The 1984-85 forecast is $408 thousand or 7.3% higher than the 1984-85 Main Estimates of $5.574 million (see Extracts from Part II of the Estimates, page 4). The difference is due to the following items approved by Supplementary Estimates:

	($000)
• start up cost of a case management and information retrieval system	301
• increase of three person-years due to workload	107

B. Recent Performance

1. Highlights

The prompt disposition of cases involving parties with conflicting interests is of primary importance in industrial relations; to meet this challenge, the Board has since 1983-84:

- provided staff in five regional offices with the necessary expertise and authority to respond to any application, complaint or submission filed in the regions (see page 14); and
- delegated Registrar functions to all Regional Directors (see page 14).

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Canada Labour Relations Board	5,472	5,071	401

The difference between actual expenditures and the Main Estimates resulted from the following items approved by Supplementary Estimates:

	($ 000)
• increased contribution payments to employee benefit plans	52
• increase due to recording and transcribing hearings caused by the impact of the Charter of Rights, complex geographical certifications and increased judicial review cases both at the federal level and in the provincial courts	120
• increase in operating and person-years due to increased workload (see page 14)	229

C. Background

1. Introduction

Jurisdiction over labour matters in Canada is subject to divisions between the federal and provincial governments. Although the power to legislate in the field of labour relations is primarily the constitutional responsibility of the provinces, the federal government also has constitutional authority originally vested in the British North America Act to enact labour legislation within its own jurisdiction.

The Canada Labour Code applies to approximately 600,000 employees across Canada who work for an industry or enterprise which is considered a federal work, undertaking or business. These industries include interprovincial or international rail, road and pipeline transportation, shipping and related services, air transportation, interprovincial and international telecommunications, banks and certain Crown corporations. Also included are industries declared by Parliament to be for the general advantage of Canada, such as uranium mining. Finally, all works, undertakings and businesses in the Yukon and the Northwest Territories are under federal labour jurisdiction.

The Canada Labour Relations Board is a quasi-judicial body with statutory powers pertaining to the administration of Part V of the Canada Labour Code which deals with industrial relations. The Board also acts under Part IV of the Code hearing appeals against safety rulings in cases where imminent danger has been alleged. It also rules on complaints by employees that they have been discriminated against or punished for exercising their rights in relation to safety.

While the Minister of Labour has general responsibility for the Canada Labour Code, the functions of the Board are outlined under Program Description which follows. The Board has departmental status with the supervising agencies and its budget is submitted through the Minister of Labour who also tables in the House the Annual Report of the Board.

2. Legal Mandate

The Canada Labour Relations Board's mandate is based on the authority and responsibility assigned to it under the Canada Labour Code (R.S. 1970, c. L-1 and as amended by S.C. 1972, c. 18, 1977-78, c.27, 1980-81-82, cc.47, 121 and 1983-84, cc.39, 40).

3. Program Objective

The basic objective of the Canada Labour Relations Board is to contribute to and promote effective industrial relations in any work, undertaking or business that falls within the authority of the Parliament of Canada.

4. Program Description

In order to fulfill its mandate, the Board is tasked with the following major responsibilities:

- the exercise of statutory powers relating to bargaining rights and their structuring;
- the investigation, mediation and adjudication of complaints alleging contraventions of provisions of the Canada Labour Code;
- the interpretation of technological change provisions affecting the terms, conditions and security of employees and the exercise of ancillary remedial authority;
- the exercise of cease and desist powers in cases of unlawful strike or lockout;
- the review of decisions relating to safety that are referred to the Board;
- the settling of terms of first collective agreements; and
- the provision of administrative services to these ends.

5. Program Organization for Delivery

Activity Structure: The Program has only one activity encompassing all aspects of its operation.

Organization Structure: As shown in Figure 3, the Board is made up of Members appointed by the Governor-in-Council. The Canada Labour Code provides for a Chairman, from one to five Vice-Chairmen and from four to eight Board Members. The Chairman is also the Chief Executive Officer and reports directly to Parliament through the Minister of Labour. Terms for those on the Board are up to five years for Board Members and up to ten years for the Chairman and each Vice-Chairman.

The Members of the Board are full-time appointees with experience and knowledge of industrial relations and labour law. Although they are based in Ottawa, the hearings are conducted across the country. (Although the Code was amended in 1984 to provide for the appointment of part-time Board Members to deal with safety cases under Part IV of the Code, no such part-time appointments have been made or requested. The corresponding amendments to Part IV of the Code were also enacted in Bill C-34 in 1984 but have not yet been proclaimed.)

The Headquarters of the Board, which encompasses Registrar functions, Administration, Records, Statistics, Library, Research, Legal and Information Services as well as Clerks of the Board and some industrial relations specialists involved in investigation, mediation and processing of cases, is located in the National Capital Region. Regional offices located in Vancouver, Winnipeg, Toronto,

Montreal and Dartmouth are staffed by industrial relations experts and support staff involved in the processing and investigation of cases as well as the mediation of complaints of unfair labour practice and responding to situations involving unlawful strikes or lock-outs. The Regional Director in each region has delegated authority to act as Registrar.

Figure 3: Organization Structure

6. Process

General: To avoid prolonging adversarial procedures and to clarify industrial relations situations, the Board must process applications and complaints as quickly as possible, consistent with the requirements of justice. This requires that persons or parties likely to be affected by an application or complaint must be made aware of the proceedings and provided with an opportunity to make representations. Employers or unions are automatically provided with a copy of an application and information on how to respond. Individual employees are advised by Board notices posted by their employer, by newspaper or other advertising. Processing of submissions is generally done by regional offices.

Bargaining Rights: A major area of activity for the Board involves the processing of applications for the acquisition or termination of collective bargaining rights. Unions are certified as bargaining agents for groups of employees in an appropriate unit when a timely application is supported by the wishes of the majority of employees in the unit. Similarily the Board will revoke the bargaining rights of a union when a timely application is supported by the majority of the employees concerned and another union may be substituted as the bargaining agent with majority employee support. The Board also deals with cases where bargaining

rights are transferred as a result of merger or amalgamation of unions or as a result of the sale of a business. Where applications are made to change the description of a bargaining unit to recognize changes or to alter the unit, the Board is called upon to make decisions.

In such cases a Board Labour Relations Officer investigates the application and prepares a report showing, among other things, the bargaining unit description in detail, the respective positions of the parties, details of the employer's organization including lists of employees by position title, organization charts, corporate structure, ownership and control information, documents relating to the bona fide of the trade union, etc. The Officer's report is forwarded to the parties and, after they are given the opportunity to comment on it, the report is forwarded to the Board for adjudicative decision. The investigator also submits a confidential report on the employees' wishes which is not made available to the parties. This report is based on an examination and verification of the signing of union membership cards and the payment of money by the employees.

Based on the report of the officer and the submissions of the parties the Board can usually dispose of such applications without a public hearing. If, however, there is disagreement between the parties on relevant matters of fact, the Board may have to conduct a hearing and hear the testimony of such witnesses as the parties may call.

Unlawful Strikes or Lockout Applications: The response by the Board to these applications (which may cover anticipated activities as well as work stoppages actually in progress) is to appoint a Board officer and schedule a priority hearing. While most cases are resolved with the assistance of the officer, it is sometimes necessary for the Board to hear the parties before it can order an offending party to cease and desist or refrain from initiating unlawful activity.

Complaints of Unfair Labour Practice: A large and growing number of cases before the Board involve charges that employers, unions or their representatives have violated specific provisions of the Code. Many of these cases are settled with the assistance of an officer of the Board. Those that are not settled account for a very substantial amount of the time spent by the Board in public hearings. The 1984 amendments to the Code may alleviate the demand for hearing time since it is now possible to dispose of some complaints against unions regarding the duty of fair representation or the operation of hiring halls or referral systems without a public hearing.

Safety: The Board may sit in appeal against the decisions of safety officers on allegations of imminent danger and dispose of complaints of discrimination against employees because they have exercised their rights in regard to safety. These cases under Part IV of the Code may be disposed of by a single member of the Board.

Miscellaneous Cases: The Board also deals with a variety of other cases such as: applications relating to Technological Change; Ministerial Referrals to consider the imposition of the terms of a first collective agreement; declarations that two or more employers be treated as a single employer; applications by unions for access orders to meet with employees working in isolated or remote areas on private property; failure of a union or employers' organization to provide financial statements to members; referrals to determine whether parties or employees are covered by a collective agreement; and other determination as to the application of the legislation.

Decisions of the Board: Decisions of the Board are always conveyed in writing to all parties even when they may have also been given verbally at the conclusion of a hearing. These decisions are provided in both official languages, and are reported in the Board's official publication. Some of the motivated decisions are reported in various legal or industrial relations publications.

Orders of the Board: Where a party refuses to comply with an order of the Board, the aggrieved party may apply to the Board to file the order in the Federal Court of Canada for enforcement. Such proceedings would include, among others, orders of reinstatement and compensation in cases of unfair dismissals, cease and desist orders in cases of illegal work stoppages, etc. If the Board cannot secure prompt compliance through the mediation process, the Order is filed in the Federal Court of Canada, and then has the same force and effect as an Order of the Court. Failure to comply may result in a finding of contempt of Court.

Monitoring: Status reports on cases are constantly updated to adjust to changing priorities as the result of receiving urgent new cases or the settlement by mediation or the withdrawal of cases already scheduled for hearing. There is also a comprehensive internal performance measurement program which measures elapsed time for the Board's activities from receipt of an application to the issuance of Board decisions.

D. Planning Perspective

1. Environment

Following an unprecedented decline in the annual case-load of the Board attributable to economic conditions generally and a perceptible decline in union organizing activity, 1983-84 saw a reversal of that trend with a record high of 771 new cases. However, the second half of that year saw an uncharacteristic tapering off of new cases. During the 1st half of 1984-85, there were 339 cases; it is expected that total volume for the year will be 740. Apart from the usual difficulties of anticipating the quantity and nature of cases that will be initiated by parties, there are other factors flowing from legislative changes that will come into play during 1985-86.

The new amendments to Part V of the Code flowing from Bill C-34 became effective from July 18, 1984. While many of the amendments will not have any impact on the resource requirements of the Board, the board's mandate has been enlarged to deal with a new type of applications relating to religious objections to the compulsory check-off of union dues. The refinements to the Code could also result in increased activity in such matters as technological change. It is difficult to predict the volume of cases arising from these provisions but it is hoped that by availing itself of procedural amendments, the Board will be able to accommodate the increased caseload.

More unpredictable is the possible consequence of the amendment to Part V of the Code to provide for part-time Board members to deal with safety cases arising under Part IV of the Code. The amendments to Part IV of the Code dealing with safety have yet to be proclaimed and no part-time Board members have been requested or appointed.

2. New Initiatives

The major challenge facing the Board in 1985-86 is to reduce the number of cases on hand to a more acceptable level in relation to the annual intake of new cases (see figure 4). No additional person-years are requested but it is anticipated that the two vacant Board member positions will be filled and that no positions will remain vacant for a prolonged period. The filling of the vacancies, the growing experience and productivity of the new vice-chairmen, the decentralized structure in place and the application of the technological equipment are expected to enable the Board to achieve its objectives.

The automation initiative which is referred to as a case management/ information retrieval system is presently scheduled to be operational in all offices across Canada by the summer of 1985. Generally speaking, the benefits which will accrue as a result of the utilization of this technology will further enhance the manner in which the Board disposes of its cases in its day-to-day administration of various elements of the government's labour legislation.

Specifically, this needed tool will provide for the following: the more timely processing of cases; the more accurate and speedy accessing and sharing of pertinent casework data on a Canada-wide basis; the more accurate and thorough search and retrieval of an extensive CLRB jurisprudential data base required to support critical decision-making, and; the provision of performance measurement data required by senior management to effectively monitor and control a relatively complex and diverse caseload.

Quite apart from the way in which this automation initiative will positively influence the level of service provided by the Board, it will reduce the person-year requirement by one beginning in 1986-87. Without such a relatively inexpensive automated system, incremental person-years would have necessarily been required to deal with the existing and rapidly expanding manual data base systems.

3. Update on Previously Reported Initiatives

The Board has in recent years been provided with two additional Vice-Chairmen and has also decentralized its operations further by delegating Registrar functions to the Regional Directors. It has added two person-years to the Regional Offices to accommodate the increased work and it has provided in 1984-85 for the acquisition of a computerized linking system.

The impact of these measures is expected to produce measurable results during 1985-86. Following a record year in the disposition of cases in 1981-82, the two Vice-Chairmen who were involved in that achievement left the Board in 1982-83. Apart from the loss of such experienced Vice-Chairmen, during the final months of their activity it was necessary for them to dispose of the cases of which they were seized but at the same time they were unable to accept new cases which they could not dispose of before their planned time of departure from the Board. Although new Vice-Chairmen were appointed in July and August of 1982, the transition and orientation requirements saw an understandable drop in the number of cases disposed of in 1982-83. The end of that year saw the backlog of cases increased by 60 cases which would have been greater but for the decline in the number of new cases received. In 1983-84 the Board disposed of 139 more cases than in the previous year but the growth in the number of new cases by 153 saw an additional 74 cases added to the backlog (see figure 4).

A third Vice-Chairman was appointed in January of 1983 and a fourth Vice-Chairman was provided as of March 1984. Following orientation the Board was adequately equipped with Vice-Chairmen but a Board Member vacancy which arose on February 1, 1984, and another which arose on August 15, 1984, remained unfilled as of December 1984. The filling of these vacancies will contribute substantially to the productivity of the Vice-Chairmen by making the required quorum of two Board Members more readily available to them.

The additional Vice-Chairmen provided since 1983 were not requested on the basis of anticipated caseload alone but to a large extent because of the changing nature of the caseload containing more complex cases and more cases which require hearing. This trend is most visible in the growth of the number of complaints of unfair labour practice. Although, withdrawals and settlements with the assistance of Board officers have increased, complaints occupied a greater percentage of hearing time. Experience has shown that cases have become more complex and require more hearing time. This trend is illustrated by the fact that in 1981-82 a total of 167 cases were involved in 210 hearing days while the same number of cases involved 256 hearing days in 1983-84 (see figure 4).

As a result of recent initiatives the Board has been able to dispose of more cases each year following the transitional year of 1982-83, has been able to allocate more hearing time and has improved performance in assisting the parties to settle cases without a hearing. The full impact of these initiatives is likely to be evident by the end of 1985-86.

4. Program Effectiveness

The nature of the Board's operation does not lend itself to a precise evaluation of effectiveness. It should be noted that program evaluation is inappropriate for the Board as an impartial tribunal. It is, however, under constant scrutiny from external sources such as employers' associations, union organizations, and the academic and legal communities. For example, the Board has been the subject of an extensive study by the Law Reform Commission. In addition, the decisions of the Board may be reviewed by the Federal Court of Canada.

5. Performance Information/Resource Justification

For the first time in its history the Board reported a decline in the number of cases determined in 1982-83 (see figure 4). While the number of cases dealt with increased by 139 or 25% in 1983-84 as a result of the addition of two Vice-Chairmen, it is expected that only a modest gain of 56 more cases disposed of or a further 8% will be achieved in 1984-85. This is due to the existence of vacancies for Board members reducing the availability of two members of the Board required under the statute by each Vice-Chairman to constitute a quorum for the handling of cases. One of these vacancies arose on February 1, 1984 and the other on August 15, 1984. On the assumption that these vacancies will be filled in early 1985 and assuming that a full complement is maintained, it is expected that the Board will be able to dispose of a record 864 cases in 1985-86 which, based on a predicted 740 new cases would enable the Board to reduce the number of cases on hand by the end of the year to 185 or roughly the equivalent of three months intake of new cases.

Figure 4: Performance Indicators

	1981-82	1982-83	1983-84	1984-85*	1985-86*
Cases determined	825	558	697	753	864
Cases heard	167	147	167	200	260

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 5: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	4,018	3,852	3,482
Contributions to employee benefit plans	562	488	512
	4,580	4,340	3,994
Goods and services			
Transportation and communications	591	577	584
Information	90	90	97
Professional and special services	427	590	479
Rentals	74	68	83
Purchased repair and upkeep	16	20	14
Utilities, materials and supplies	154	158	169
All other expenditures	18	18	17
	1,370	1,521	1,443
Total operating	5,950	5,861	5,437
Capital	31	121	35
Total expenditures	5,981	5,982	5,472

2. Personnel Expenditures

Figure 6: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	21	17	17	50,350 - 96,300	71,367
Scientific and Professional	4	4	4	19,782 - 88,120	33,741
Administration and Foreign Service	31	35	34	12,766 - 63,870	38,777
Administrative Support	48	45	43	12,636 - 31,946	22,186

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 7: Total Program Costs ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Total 1984-85
Canada Labour Relations Board	5,981	1,198	7,179	6,901

Other costs of $1,198 thousand consist of:

	($000)
• accommodation provided without charge by DPW	1,118
• DSS cheque issue	10
• payment of insurance premiums by TBS	70

Canadian Advisory Council on the Status of Women

1985–86 Estimates

Part III

Expenditure Plan

343

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Advisory Council
on the Status of Women

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Section I
Program Overview

A. Highlights

During 1985-86, the Council has the following goals:

- to initiate two main research studies concerning women; the first study will examine some of the most frequent incidents of violence against women, including pornography, sexual assault, wife battering, domestic violence and incest; the second will examine how women are faring today in traditional male power structures, including politics, government, the media, churches, universities, unions, and business (see page 17);

- to initiate two additional studies on rural women and housewives (see page 17);

- to complete research begun in 1982 on issues related to women and the economy and adolescent women (see page 17); and

- to produce a report relating to a conference held in 1984-85 on the family and the law. The aim of this Forum is to provide a unique occasion for those with a special interest in family law to meet with experts and government policy-makers to exchange and define positions on the new issues such as: joint custody of children, dejudicialization, common-law spouses, new reproductive technologies, and community of property.

B. Financial Summary

Personnel costs for the Canadian Advisory Council on the Status of Women (including contributions to employee benefit plans) constitute over 57% of total expenditures.

Figure 1: Financial Requirements ($000)

	Main Estimates 1985-86	Forecast 1984-85	Change
Canadian Advisory Council on the Status of Women	2,383	2,427	(44)
Planned person-years	37	28	9

Supplementary Estimates of $180,000 were approved in 1984-85 for two conferences and various other operating costs. Additional person-years were, for the most part, funded from authorized expenditure levels to establish a communications/publications services function. The 1985-86 decrease in the Main Estimates over the 1984-85 forecast represents the net effect of an allowance for salary increases and the elimination of the one-year-only expenditures related to the conference on the family and the law.

C. Background

1. Introduction

The Council reports to Parliament through the Minister Responsible for the Status of Women. It acts as a conduit for information from women across Canada to the federal government regarding all issues of concern to women. In providing ongoing advice to the government, the Council conducts independent research which largely serves as the basis for recommendations on the broad spectrum of women's concerns. It retains the right to publish its views without ministerial consent. An annual report is tabled by the Minister outlining the activities of the Council.

The Council should not be confused with other federal organizations relevant to women, including the Status of Women-Office of the Coordinator (Status of Women Canada), the Women's Bureau of Labour Canada and the Women's Program of the Secretary of State. These organizations undertake the following:

- Status of Women Canada provides day-to-day advice and assistance to the Minister Responsible for the Status of Women on the needs and concerns of women in Canada, carries out policy and program analysis and development and informs women's organizations and the general public on federal government policies and programs concerning the status of women;

- the Women's Bureau carries out research and develops policies relative to the impact of the Canada Labour Code on women in the labour force; and

- the Women's Program is responsible for administering grants available to non-government women's organizations at the national, regional and local levels.

2. Legal Mandate

In its report tabled September 28, 1970, the Royal Commission on the Status of Women recommended the creation of a federal Status of Women Council (recommendation 166).

In 1973, the Canadian Advisory Council on the Status of Women was established as an independent organization funded by the government. The Council was granted legal status through Order in Council PC 1976-781, which stipulates that the Council is considered to be:

- an agent of Her Majesty in right of Canada; and

- a Commission for the purpose of subsection 32(3) of the Public Service Superannuation Act.

The Council's mandate is:

- to bring before the federal government and the public matters of interest and concern to women; and

- to advise the Minister on such matters relating to the status of women as the Minister may refer to the Council for its consideration or as the Council may deem appropriate.

3. Program Objective

The objective of the Canadian Advisory Council on the Status of Women is to bring before the government and the public matters of interest and concern to women.

4. Program Description

The Council provides the federal government with advice on both the impact on women of existing policies and programs and the development of new measures to improve the status of Canadian women; undertakes and publishes research on issues of interest and concern to women with the view to achieving needed reform; informs the general public on key issues and promotes an awareness of these issues through public and media relations; and contributes to the development of a substantive body of Canadian resource material on women's issues.

Facilities and services offered by the Council are:

- a documentation centre providing research material on women's issues;
- a pensions clearinghouse providing information on pensions for women;
- a talent bank of suitably qualified women which serves as an inventory of candidates for positions on boards, commissions, etc.;
- several specialized mailing lists and a general mailing list providing information to over 5,000 individuals and women's groups; and
- regional offices in Montreal, Vancouver and Winnipeg providing women across the country with access to information, publications, etc.

5. Program Organization for Delivery

Activity Structure: The Council has one activity which is synonymous with the Program.

Organization Structure: The Program is organized into three main sections: Administration, Research and Communications/Publications.

Administration: The Administration Section comprises three responsibility centres. The functions of each are described below.

Central Office: Most of the Council's services are provided through the central office in Ottawa. All administrative services and a distribution centre operate under the responsibility of the President and the Executive Director. The distribution centre ensures that women's groups, various federal and provincial government bodies, special interest groups and concerned individuals are alerted to both ongoing and emerging women's issues through regular and special mailings. Facilities are also made available to women's groups for meetings, lectures, etc. In addition, a documentation centre provides outside researchers with specialized information.

Regional Offices: The Council maintains an effective presence in all areas of the country through a regionally diversified structure which consists of two regional offices headed by Vice-Presidents in Vancouver and Montreal and a local office in Winnipeg. These offices oversee regional distribution of the Council's publications and provide reference facilities for consultation of documentation concerning women. They also lend support to Council members and women's groups for activities in their areas.

Council Members: The Council is composed of 27 part-time members who are appointed by Order in Council for a term of three years. They are volunteers who undertake work on behalf of women in their regions, such as speaking to women's groups, mounting displays of the Council's publications, etc., without payment. They do, however, receive per diem payments for attendance at the quarterly Council meetings and some financial support for expenses incurred for other related Council functions.

Research: The Research Section is responsible for research for books, background papers and fact sheets. Policy analysis and research on issues are undertaken as they arise or as needed by the Council, the government and the public.

This Section also prepares position papers on the implications for women of specific proposals for new legislation, policies or programs. It also consults directly with federal government officials during the development of these proposals. In addition, it provides advice, through briefs or ongoing consultation, to Parliamentary committees, special task forces and commissions of inquiry. As past efforts by the Council and other groups have resulted in greater sensitivity to women's issues on the part of policy-makers, the demand has multiplied for this reactive role of the Research Section. In addition, from time to time it monitors and evaluates the effectiveness of key government policies and programs affecting women.

To carry out these duties efficiently, it maintains liaison with universities, women's groups, independent researchers, and may promote joint projects with federal government departments.

Communications/Publications: The Communications/Publications Section promotes public awareness of the Council's work and ensures accessibility to information concerning women. Responsible for media relations, it prepares news releases, responds to media enquiries, coordinates the President's interviews and speeches and organizes information campaigns in response to issues requiring immediate action.

This Section oversees the publication of all Council documents, including research reports, fact sheets and brochures. Revision, translation, proof-reading, production, printing and promotion of documents is arranged along with reprinting when required. Information materials for use by the general public are designed and prepared in a variety of formats by the communications staff. Displays of Council information at conferences and other women's events are also organized.

A national and international distribution system for the Council's documents is also maintained. This system includes regular mailings to libraries throughout Canada, an ongoing distribution agreement with the Canadian Council on Social Development for the sale of publications, special arrangements with federal agencies regarding specific documents and mailings to women's and other relevant interest groups.

Figure 2 shows the allocation of resources by responsibility centre.

					Total
($000)	485	424	361	1,113	2,383
Person-years	7	6	7	17	37

* includes resource requirements for the President, Council Members and Central Office.

D. Planning Perspective

1. Environment

Legislation: The most effective way to change the status of women is through concrete changes in our laws. The Council is now doing research on legal action for women in Canada which would assist women in inducing legislative change to improve their position in society. It is the Council's priority to promote legislative reform in areas of social policy.

Public Pressure: Many issues which are part of a larger agenda for social reform may suddenly become the centre of public controversy. Discussion of federal legislation on pensions, pornography and the status of Indian women are recent examples in which the Council has been active. The Council is often called upon quickly to make its opinion known on such controversial issues.

Economic Conditions: These factors drastically affect the well being, the living standards and employment opportunities of every Canadian woman. For this reason, changes in the economic climate may bring dramatic modifications in the economic status of women. The Council is currently engaged in research on the employment and social aspects of microtechnology and a major study of women and the economy (see page 17).

Level of Public Awareness: In the last decade, changes in social values have meant that a number of Canadians have become sensitized to issues that preoccupy the Council. This has resulted in a greater volume of work and increasingly sophisticated analysis of these issues. Finally, policy-makers themselves now frequently initiate consultations with the Council, which makes a heavy demand on existing resources.

2. Initiatives

Having considered the environmental factors, the Council's efforts will be directed to a continuation and expansion of initiatives undertaken in prior years. Key goals planned for 1985-86 are identified under "Highlights" on page 5 of this document.

3. Program Effectiveness

The objective of the Council is to bring matters of interest and concern to women before government and the public. The effectiveness of the Council in reaching its objective should be assessed in terms of the influence of its research findings and related recommendations on government action, and in terms of the impact of its Communications/Publications Section on the public's awareness of the issues facing women. The Research Section is essential to the success of the Council in making specific and practical recommendations to the relevant government departments and the Communications/Publications Section helps generate a climate of informed public opinion regarding women's concerns, and contributes to the body of documented research on women in Canada.

Supported by a solid research base, the Council fulfills a crucial role by presenting women's interests to government. Direct impact is achieved through the presentation of briefs and recommendations to parliamentary committees and government commissions of inquiry. Recently, consultations have been held on such important and complex issues as pension reform, pornography and prostitution, divorce law reform, affirmative action and women's role in the economic future of the nation. The Council also maintains ongoing liaison with groups such as the Macdonald Commission to ensure a non-sexist approach to the Commission's work. The 10th anniversary of the Council in 1983 occasioned a major review of its recommendations over the years and of their impact on tangible progress for women in Canada. Given the Council's mandate to inform and advise it is difficult to measure fully the degree and extent of its effect on government action and public opinion. Nevertheless it can be demonstrated that it has exerted a considerable influence and has consistently been in the forefront of undertakings which have eventually been brought into law. Three issues in which the Council played a leading role serve to illustrate this influence and are presented in Figure 3. They are: Pensions, Battered Women and Indian Women.

Figure 3: Illustration of Issues Influenced by Council Recommendations

	Action by the Canadian Advisory Council on the Status of Women		Action by the Federal Government
Pensions:			
1981	Publishes **Pension Reform with Women in Mind**, a major contribution to pension debate from women's perspective; establishes a National Clearinghouse on Pensions for use of regional conferences proposed by Health and Welfare Canada, and as a resource for women's groups; publishes **Pension Reform for Women: a Discussion Paper** as a tool for such conferences.	1981-82	Health and Welfare Canada finances regional conferences for women on pension reform.
1982	Publishes Fact Sheet on Pensions.	1982	Releases Green Paper, **Better Pensions for Canadians**; strikes parliamentary Task Force on Pension Reform.
1983	Submits brief to Task Force; elaborates detailed recommendations, including immediate implementation of child-care drop-out provision.	1983	Ontario removes its veto of the child-care drop-out provision.
		1984	Announces intention to introduce pension legislation, including many proposals brought forward by the Council.
Battered Women:			
1980	Holds consultation with service agencies and shelters; publishes **Wife Battering in Canada: the Vicious Circle** – the first national study of this problem.		

Action by the Canadian Advisory Council on the Status of Women		Action by the Federal Government	
1980-81	Releases series of recommendations, including proposal that Health and Welfare Canada mail out information on wife battering with family allowance cheques.	1981	Parliamentary Task Force on Family Violence convenes.
1981	Submits brief to Task Force; publishes Fact Sheet on Wife Battering.		
		1982	Health and Welfare Canada sends out brochures to 3,500,000 women; the National Clearinghouse on Family Violence is created.
		1983	Federal-provincial study of progress and proposals for reform is undertaken.
Indian Women:			
1973	Produces first of many recommendations that discriminatory provisions be removed from the Indian Act.		
1978	Publishes **Indian Women and the Law: Citizens Minus** – the first national documentation of this issue.		
1982-84	Supports, through recommendations, press releases, interventions to Ministers and the House of Commons, the efforts of native women's groups to participate in Constitutional decisions and have dicriminatory provisions removed.	1982	Parliamentary Sub-Committee on Indian Women and the Indian Act is established.
		1984	House of Commons passes legislation to remove discriminatory sections of Act; blocked in Senate.

The Council's effectiveness in bringing to the attention of the public matters of interest and concern to women can be assessed indirectly by means of trends in the level of demand for the Council's publications. These publications are representative of research undertaken on major issues. Some of the subjects studied in the past fiscal year are parental benefits, financial implications of marriage breakdown, women in the federal public service and prostitution.

Many of the Council's publications represent the first in-depth national documentation of important women's concerns. Others, such as a current volume on economic issues, serves a different and equally valuable function in focusing scattered issues and areas of research into a clear and compelling presentation.

The level of credibility of Council's work to the public can also be assessed by the level of demand for input to policy debates. The Council's position statements and research findings are widely quoted by women's groups and the news media as well as in specialized publications and major government reports. Figure 4 (see page 16) provides some indication of the demand levels over a five-year period.

4. Performance Information/Resource Justification

Given the Council's mandate to provide independent advice to the Minister and inform the public, traditional methods of determining performance are difficult to apply. Possible indicators of performance are the number, dimension and complexity of research projects completed, briefs presented, and the capacity to respond to requests for information/documentation by the public.

The Council responds to public requests by ensuring daily mailings of documents. Some of the most requested publications are: Women and Aging, As Things Stand, Play from Strength, It's your Turn, Pension Reform with Women in Mind, Five Million Women, and Better Day Care for Canadians. Figure 4 indicates the increase over the last years in the distribution of the Council's publications and fact sheets.

In 1981, initiatives had been made to have yearly consultations with national women's groups. Figure 4 also shows the growing involvement of women's groups in these consultations which, in 1984-85, were held twice in that year.

Figure 4: Distribution of Documents and Consultation to Women's Groups

	1985-86 Forecast	1984-85 Forecast	1983-84 Actual	1982-83 Actual (1)	1981-82 Actual (1)
Publications distributed by the Council	144,000	120,045	94,760	75,469	75,469
Fact Sheets distributed by the Council	200,000	158,517	206,487	175,300	175,300
Publications sold	10,000	4,306	5,535	9,067	9,067
Women's groups consulted	40	40 (2)	36 (2)	25	25

(1) Separate information is not available for each year. The figures shown are an average of the total number distributed over two fiscal years.

(2) The costs of these meetings were shared with the Women's Program and Status of Women Canada (see page 7).

The major research projects completed or planned are listed in Figure 5.

Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 6: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	1,193	903	900
Contributions to employee benefit plans	167	117	114
	1,360	1,020	1,014
Goods and services			
Transportation and communications	320	354	292
Information	330	429	222
Professional and special services	290	518	552
Rentals	38	35	42
Purchased repairs and upkeep	4	21	2
Utilities, materials and supplies	30	34	37
Total operating	2,372	2,411	2,161
Capital	11	16	13
Total expenditures	2,383	2,427	2,174

2. Personnel Expenditures

Figure 7: Planned Person-Years and Salary Provision

	Planned Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	4	4	4	50,350 - 96,300	58,377
Scientific and Professional	4	3	3	13,609 - 88,120	34,332
Administrative and Foreign Service	15	8	8	12,766 - 66,252	31,621
Administrative Support	14	13	13	12,636 - 37,130	20,021

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 8: Net Cost of Program for the Year 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Net Cost	Total 1984-85
Canadian Advisory Council on the Status of Women	2,383	265	2,648	2,651

The adjustments made to the voted budgetary operating expenditures to arrive at the net cost include services provided without charge by Public Works ($234,000), Supply and Services ($3,000), Treasury Board ($25,000) and Superannuation($3,000).

1985-86 Estimates

Part III

Expenditure Plan

367

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Aviation
Safety Board

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition references are contained throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $12,435,000 in support of the 1985-86 Canadian Aviation Safety Board Program. The remaining expenditures, estimated at $1,186,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85* Main Estimates

* There were no 1984-85 Main Estimates for the Canadian Aviation Safety Board Program. The Program was established effective October 1, 1984. Funding from that date to March 31, 1985 was obtained through 1984-85 Supplementary Estimates.

Section I
Program Overview

A. Highlights

During 1985-86 the Canadian Aviation Safety Board (CASB) will:

- actively assume its new role and mandate as the Canadian Government's independent aviation safety organization with the sole objective of advancing aviation safety (see page 8). The total cost of the first full fiscal year of operation is estimated to be $13.6 million;

- prepare and submit to Parliament an annual report on the first full year of its operations as well as its findings and recommendations for this period;

- complete the implementation of the newly developed Comprehensive Occurrence Reporting System involving both the mandatory and voluntary reporting of aviation occurrences to the Board (see page 10). The cost of operating this system will be approximately $1.5 million annually beginning in 1985-86; and

- undertake a number of major initiatives and steps to ensure the effectiveness of the Board as a fully operational independent entity. These steps include: the development and national implementation of computerized operational, management information and telecommunication systems; the further development of the Board's first communications and public affairs program; and the development and implementation of policies and standards in a number of operational areas (see pages 13 and 16).

B. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Advancement of Aviation Safety	13,621	10,036	3,585
Authorized person-years	182	139	43

* The CASB did not receive funding through Main Estimates for 1984-85. The Forecast for 1984-85 is comprised of funds transferred from Transport Canada (see Figure 9, page 19) plus additional funding received through 1984-85 Supplementary Estimates.

Explanation of Change: Financial requirements for 1985-86 are $3.6 million or 36% higher than the 1984-85 Forecast. This is due to the three-year phased resource base increase (1984-85 through 1986-87) which was to allow for the orderly restructuring of the new organization as the Board begins to administer its own program and commences to exercise its broadened mandate (see Figure 9, page 19).

C. Background

1. Introduction

The Canadian Aviation Safety Board (CASB) was created when Bill C-163 received Royal Assent on November 17, 1983. The development of that legislation was prompted by recommendations resulting from the Inquiry On Aviation Safety In Canada which was conducted by Mr. Justice C.L. Dubin during 1980 and 1981. A key recommendation called for "The creation of a tribunal independent of any department of government to be called the Canadian Aviation Safety Board". That recommendation was based on the conclusion that a serious conflict of interest, detrimental to aviation safety, existed with the aviation regulatory authority and the accident investigation body, both being under Transport Canada's jurisdiction. Consequently, the Canadian Aviation Safety Board Act was proclaimed partially effective May 1, 1984 and took full effect October 1, 1984 establishing the Board as a fully independent departmental corporation operating under Schedule B of the Financial Administration Act and reporting to Parliament through a designated Minister.

Prior to the Board's establishment, a portion of its mandate was performed by the Aviation Safety Bureau, a branch within the Air Administration of Transport Canada. With the formation of the CASB, the majority of the mandate and resources of the Aviation Safety Bureau were transferred from Transport Canada to the Board to form its nucleus. Some resources related to aviation safety medicine were also

transferred from the Department of Health and Welfare. Additional resources were also required since the mandate of the CASB has been considerably expanded from that of its predecessor in Transport Canada.

Under the CASB Act, and with the objective of advancing aviation safety, when the Board investigates, it has the exclusive authority to determine contributing factors and causes for aviation accidents, incidents and hazards involving civil (non-military) aircraft in Canadian territory and, based on its findings, to make safety recommendations designed to eliminate or reduce aviation safety deficiencies. It may also represent Canadian interests and participate in investigations of those aviation accidents, incidents and hazards occurring outside of Canadian territory which involve Canadian citizens, or Canadian registered and/or manufactured aircraft. The Board also has the authority to call and hold public inquiries into aviation occurrences as it deems necessary, as part of the investigative process.

The Board is not responsible for implementing its recommendations. That is the function of Transport Canada, the regulator of the Canadian civil air transportation system, or any other department or agency to which a recommendation may be addressed. However it is incumbent upon the CASB to monitor the degree to which its recommendations are acted upon by the regulatory agency and to report its observations on this to Parliament.

2. Legal Mandate

The legislative authority under which the Board operates is the Canadian Aviation Safety Board Act.

3. Program Objective

As stated in the CASB Act the sole object of the Board is to advance aviation safety.

It is important to highlight, as the Act does, that the objective of the Board is solely to advance aviation safety. The legislation is specific in noting that it is not the object of the Board to determine or apportion any blame or liability in connection with the occurrences it investigates.

4. Program Organization For Delivery

Activity Structure: The CASB Program consists of one activity comprised of five sub-activities, each of which relates to a major operational function of the Board (see page 9). Each sub-activity is the responsibility of a single senior manager.

Organization Structure: The organization structure of the Board is traditional in most respects but some relationships are unusual in

recognition of the CASB Act. The Chairman is Chief Executive Officer of the entire CASB and as such is responsible for the supervision and direction of the work of all Board staff. He is also Chairman of the Board proper which is comprised exclusively of the Chairman and appointed Board members. The Board proper does not have any executive authority. The Chairman only exercises executive authority in his capacity as Chief Executive Officer and not as Chairman of the Board. The executive powers of the Chairman flow to the staff through the Executive Director. In addition, the CASB Act empowers the Director of Investigation to have the exclusive authority to direct the conduct of investigations on behalf of the Board. The purpose of this arrangement is to avoid an internal conflict of interest situation by separating as much as possible (with a common Chairman), the Board's review of reports and issuing of recommendations from the work of the staff of the Board.

The distribution of person-years by organizational function is shown in Figure 2.

Figure 2: Person-Years by Organization/Function, 1985-86

The head office of the Board is located in the National Capital Region. The six regional Offices of Investigation are located in Moncton, Dorval, Toronto, Winnipeg, Edmonton, and Vancouver, and all fall under the Investigation function. The engineering laboratory is at Ottawa Airport and the planned medical laboratory location is not yet determined.

5. Program Description

Functions: The Canadian Aviation Safety Board is responsible under the CASB Act for advancing aviation safety in Canada. The Board is not a judicial or regulatory body. With the ultimate objective of accident prevention, the Board may investigate any civil aviation occurrence for the purpose of making findings as to its contributing factors and causes and make recommendations thereon. Aviation occurrences are defined as any accident or incident associated with the operation of an aircraft, and any situation or condition that, if left unattended, could induce an accident or incident. The functions of the Board can best be described by examining each of its sub-activities.

Board, Executive and Legal: The Board proper is comprised of the Chairman and appointed members. The Board reviews aviation incident reports, issues safety recommendations, and issues public reports on its findings. The Board may also conduct public hearings in order to determine contributing factors and causes related to the aviation occurrences it investigates.

As Chief Executive Officer of the CASB the Chairman is responsible for the supervision over and the direction of the work of all staff. The Chairman exercises this executive authority through the Executive Director who is accountable to the Chairman for the day-to-day operations of CASB staff.

Legal services are provided by legal counsel staff who advise the Chairman and Board, through the Executive Director as required, on all legal matters.

Aviation Safety Investigation: The function of this sub-activity is to conduct investigations into aviation occurrences and to identify safety deficiencies through the investigative process. This sub-activity also prepares reports on its findings and develops proposed safety recommendations for assessment by Safety Programs and eventual consideration by the Board. In addition, safety investigation is concerned with improving the quality of the investigative process through: the development of improved investigative standards and procedures; the development of criteria for the recruitment and training of investigators; and the performance of ongoing quality reviews and audits of the investigative process.

Aviation Safety Programs: This function involves the development and operation of aviation safety databases and information systems. It also includes the development and operation of aviation occurrence reporting systems and the conduct of safety deficiency analysis and research through the analysis of all aviation occurrence data collected. In addition, the safety programs function is the central focal point in the Board for communications/public affairs and the formulation of all formal safety recommendations to be considered for public issuance by the Board.

Aviation Safety Engineering: This function is in support of the investigative process and involves the scientific testing and analysis related to the machine-element of aviation occurrences. The work includes the technologically specialized testing and analysis of materials, structural components, and systems recovered from aviation occurrence sites. The Safety Engineering sub-activity also involves: participation in field investigations; extraction of data from cockpit voice and flight data recordings; and the development of findings in support of the safety analysis and investigative processes.

Aviation Safety Medicine: Similar to Safety Engineering, this sub-activity is in direct support of the investigative process. It involves the scientific testing and analysis related to the human-element of aviation occurrences. Functions include the specialized technological testing and analysis of human tissues and fluids taken from deceased crew and/or passengers involved in aviation occurrences. The safety medicine sub-activity also involves: participation in field investigations; identification of contributory human-factors; and the development of findings in support of the safety analysis and investigative processes.

Administration: The Administration sub-activity involves the provision of all administrative support services in the areas of personnel, finance, internal administration, translation and registry and secretariat services in support of Board public inquiries.

D. Planning Perspective

1. Environment

The overall environment within which the CASB operates is essentially the same as when portions of the Board's mandate were carried out under Transport Canada. The one significant exception to this is, that the Board now operates independently of, and at arms length from, Transport Canada, a department which has now become a major external factor. There are several significant environmental factors that will affect the direction and nature of the CASB in 1985-86 and the years to follow.

The Canadian Civil Air Transportation System: The national air transportation system of which the CASB is a component is a large and complex one which processes over 50 million enplaned and deplaned passengers annually through Canadian airports. There are approximately 1,100 certified Canadian air carriers and 1,000 foreign carriers authorized to operate in Canada. In addition, there are over 80,000 licensed aviation personnel, 25,000 registered aircraft and 1,200 licensed aerodromes. The Canadian aerospace industry and the airline industry each employ over 40,000 people. In addition, more than 13,000 people are employed by the Canadian Air Transportation Administration of Transport Canada in pursuing its objective of attending to the development and operation of a safe and efficient national civil air

transportation system. All of these groups are components of the national air transportation system and each one has an impact on aviation safety in Canada. The CASB must work within this complex milieu and exert influence on it in order to advance aviation safety in Canada.

Public Interest in Aviation Safety: Although aviation safety has always been a matter of public concern, in recent years it has attained a previously unprecedented importance in the public domain. The recent Dubin Inquiry On Aviation Safety In Canada highlighted some serious defects in the Canadian aviation safety system and received extensive media coverage thus increasing public awareness of aviation safety matters. Also, the catastrophic nature of major aviation disasters often involving the loss of dozens of lives and millions of dollars often leads to widespread public attention and concern.

Figure 3: Five-year Average, Number of Accidents Per Year to Canadian Registered Aircraft by Type of Operation

Type of Operation	1969-1973	1974-1978	1979-1983
Scheduled	3.2	2.2	2.8
Unit-toll non-scheduled	9.2	7.6	6.4
Charter and contract	139.4	141.0	137.6
Speciality	99.4	123.4	112.4
Flying clubs	23.2	24.2	22.6
State	5.2	6.0	6.4
Private	285.2	357.4	322.4
Commercial non-revenue	15.8	29.6	20.2
All aircraft	580.6	691.4	630.8

Note: Data on ultralight accidents are not included. The numbers of recorded ultralight accidents are: 1981-6; 1982-24; 1983-60.

Technological Factors: Over the last 20 years the rate of technological change in the aviation industry has been unprecedented. This is largely due to the rapid development of jet technology and more recently the significant advances in computer technology and its application to the aviation industry. The new generation of aircraft, both large and small, are extremely sophisticated when compared to their counterparts of 15 to 20 years ago. These new computer technologies not only apply to aircraft but also to other components of the aviation system such as air traffic control systems and navigational facilities.

The development of the new ultra-light aircraft also has a significant impact on the CASB Program. Although not sophisticated in a technological sense, the recent proliferation of ultra-lights has resulted in a significant increase in aviation occurrences (see Figure 3). These aircraft are not built to airworthiness standards and the training and experience levels of the pilots are often minimal. Therefore, ever-increasing human and financial resources are being expended in investigating this type of aviation occurrence.

2. Initiatives

Three major initiatives will be undertaken by the CASB in 1985-86:

- to implement throughout the organization, including headquarters and regional offices of investigation, a fully integrated set of computerized information systems, telecommunication systems, and databases, designed to enhance aviation safety deficiency analysis and research and to facilitate more efficient and effective operational and management activities, and to advance aviation safety through the efficient and timely production and dissemination of reports and recommendations. The total cost of systems development and equipment acquisition is estimated to be $750 thousand;

- to develop and implement an initial communications and public affairs program to provide information on the Board's new status and mandate to the aviation community, special interest groups, and the general public. The program will also be designed to establish the image of the new Board as an independent and objective aviation safety body. The cost to establish this program in 1985-86 is estimated at $200 thousand; and

- to undertake a resource base review in early 1986 to examine the resource requirements of the CASB based on its first two years of operation as an independent body. The results of the review will determine whether the initial estimates of CASB resource requirements were appropriate.

3. Program Effectiveness

The degree to which the CASB achieves its statutory objective - to advance aviation safety - will attest to its effectiveness. Two of the basic principles underlying the development of the CASB Act were those of independence and objectivity. The manner in which the Board executes its statutory mandate through the application of high ethical standards, competent analysis, and sound unbiased judgement, will be paramount to gauging the Board's future effectiveness as intended by the Act.

In the future the CASB intends to attempt to quantify the Board's contribution to aviation safety. This will not be an easy task. There are many factors outside of CASB control that may influence aviation safety in Canada such as: aviation activity levels; economic and public policy; technology; public opinion; and natural factors (weather). The way in which Transport Canada performs its regulatory role over the aviation community is another significant variable. In addition, there may well be many other influential factors that are as yet unidentified.

In the meantime, the degree to which the CASB executes its statutory mandate will have to serve as the subjective measurement of its overall effectiveness.

4. Performance Information/Resource Justification

Figure 4 provides a summary of how operating resources (not including capital) are utilized, broken down by function. Figures are not available for 1983-84 (Aviation Safety Bureau) since the structure shown only came into effect when the Board was established in mid-1984-85. Also, the primary reason for the variances between 1984-85 Forecast and the 1985-86 Estimates is due to the phasing-in of the CASB resource base (see page 19).

Figure 4: Program Expenditures by Function ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Board, Executive, and Legal	1,140	14	430	4
Safety Investigation	6,338	94	5,296	83
Safety Programs	1,616	24	1,021	16
Safety Engineering	1,273	19	1,149	18
Safety Medicine	316	5	-	-
Administration	1,748	26	1,148	18
	12,431	182	9,044	139

General workload indicators that exert influence on the operations of the Board are the numbers of aviation accidents, incidents, and hazardous situations, which are defined collectively as aviation occurrences (see page 10). These variables are external to the Board's control and are therefore difficult to predict (see Section 3). Figure 5 presents a summary of the estimated general workload indicators.

Although the workload indicators shown in Figure 5 are of interest, simply forecasting the total number of aviation occurrences is not sufficient for determining the actual expected workload. It is evident that there would be a wide variance in human and financial resources

expended in the complex investigation of the crash of a jetliner involving fatalities when compared to the relatively straightforward investigation of the crash of a single engine private aircraft. Even in the case of two accidents or incidents that appear to be identical circumstantially, there is often a significant variance in resources expended due to the evolving complexity of contributory factors that emerge as the investigation proceeds. Also, as mentioned in the Environment section (see page 12), as aviation technology continues to develop at its current rapid pace the job of investigation will become increasingly more specialized, complex and resource-intensive.

Figure 5: General Workload Indicators[1]

Reported to the Board	Forecast 1985-86	Forecast 1984-85
Accidents	432	483
Incidents[2]	800	350
Hazards	250	200
	1,482	1,033

1 The only comparative Actual figure for 1983-84 is 510 accidents since the reporting and investigation of incidents and hazards did not begin on a national basis until late 1984-85.

2 The increase in incidents forecast is due to the phasing-in of the new Comprehensive Aviation Occurrence Reporting System (see page 6).

Another point to consider when relating workload indicators to resource utilization/requirements is that one is often not a direct function of the other. Factors such as economies of scale and productivity improvement measures may well come into play, thus increasing efficiency. On the other hand, decreasing workload determinants would not necessarily warrant a directly corresponding decrease in workload and resource levels. A reduction in the number of accidents may on the surface indicate a reduced requirement for investigators. However, among those accidents which did occur, a number of them could be major occurrences each requiring an intensive investigative effort. Also, investigations are likely to become increasingly resource-intensive as investigative methods and techniques are updated and improved to respond to the complex technology of modern aircraft. In addition, there are significant overheads involved in maintaining a "state-of-readiness" to respond quickly to certain unpredictable requirements. In the case of most accidents the evidence is transient and perishable. Therefore, a highly specialized and well-trained team of experts must be available at all times for immediate response.

Although many outputs produced by the Board are qualitative in nature and therefore cannot be easily quantified, there are some output indicators which can be measured and compared on a year-to-year basis. However, until the Board has been operating independently for at least two to three years, comparitive statistics on output indicators will not be available. Typical output indicators are, numbers of:

- investigations performed;
- safety deficiencies identified;
- safety recommendations issued;
- reports published;
- public inquiries conducted.

Some specific measures the Board plans to take in 1985-86 to enhance its performance and optimize its resource utilization include the following:

- the development and implementation of a comprehensive training program designed to ensure that investigators will possess the wide-range of knowledge and skills necessary to cope with the increasingly specialized and complex nature of aviation safety investigation and analysis;

- the commencement of a review and update of standards, procedures and techniques employed in performing aviation occurrence investigation and reporting, designed to improve the quality and consistency of the investigative process; and,

- the initiation and conduct of a number of safety studies on specific topics designed to develop information and findings that can be used for accident prevention purposes.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Canadian Aviation Safety Board expenditures by object are presented in Figure 6.

Figure 6: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85
Personnel		
Salaries and wages	8,475	6,074
Other personnel costs	2,471	1,150
	10,946	7,224
Goods and Services		
Transportation and communications	461	591
Information	65	81
Professional and special services	695	760
Rentals	28	49
Purchased repairs and upkeep	57	88
Utilities, materials and supplies	175	246
Other expenditures	4	5
	1,485	1,820
Total operating	12,431	9,044
Capital	1,190	992
Total expenditures	13,621	10,036

2. Personnel Expenditures

Personnel expenditures (including statutory contributions to employee benefit plans) constitute approximately 80% of total operating costs for the Board.

Figure 7: Authorized Person-Years and Salary Provision

	Authorized Person Years		Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85		
Executive				
Board Members	6	5		70,977
Executive/Senior Management	7	7	50,350-96,300	60,953
Scientific and Professional				
Economics and Statistics	2	-	14,570-65,080	39,670
Engineering	10	7	23,306-76,130	44,327
Law	2	-	20,523-88,120	74,825
Medicine	4	-	40,054-85,140	69,092
Other	1	1		
Administrative and Foreign Service				
Administrative Services	9	6	13,912-57,987	38,481
Computer Systems	2	1	18,766-61,433	41,964
Financial Administration	2	2	13,853-57,980	44,749
Information Services	3	1	13,579-57,980	41,973
Personnel Administration	2	2	13,330-63,870	44,581
Technical				
Aircraft Operations	62	49	34,323-63,173	50,680
Engineering and Scientific Support	3	1	14,041-50,866	26,152
General Technical	3	1	12,635-55,682	43,316
Social Science Support	3	2	12,635-57,764	33,180
Technical Inspection	24	24	12,635-57,691	44,107
Administrative Support				
Clerical and Regulatory	21	14	12,932-31,743	22,114
Secretrial, Steno., Typing	16	16	12,636-31,946	21,564

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational groups. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Total Program Cost

The Board's 1985-86 Estimates include authorities to be voted and statutory authorities. When describing the Program on a full cost basis other costs must be included as shown in Figure 8.

Figure 8: Total Cost of Program for 1985-86 ($000)

	1985-86 Total Expenditures	Add Other Costs	Total Costs 1985-86	Total Costs 1984-85
Canadian Aviation Safety Board	13,621	1,160	14,781	11,167

Total expenditures include all operating and capital costs for the Program. Other costs include services provided without direct charge to the CASB program by Public Works Canada and Transport Canada for accommodation ($1.021 million), by Treasury Board for the employers' share of health insurance premiums and costs, and by Supply and Services Canada for elements of pay administration.

C. Establishment of Resource Base

Establishing the resource base for the CASB involved the transfer of operating and capital resources from the operating bases of both Transport Canada and the Department of Health and Welfare as well as the provision of additional resources to enable the CASB to perform its broadened mandate and to function as an independent agency (see page 7). Figure 9 provides a breakdown of the establishment of the CASB operating resource base which is phased over a three-year period.

Figure 9: Establishment of CASB Operating Base ($000)

	Total Expenditures					
	1984-85		1985-86		1986-87	
Source of Resources	$	P-Y	$	P-Y	$	P-Y
Transport Canada	7,931	116	8,238	121	8,386	121
Health and Welfare	-	-	270	3	270	3
New resources	2,105	23	5,113	58	5,582	86
Total operating base	10,036	139	13,621	182	14,238	210

Note: All funds beginning in 1985-86 will be appropriated under CASB authority. The levels and the phasing of resources were authorized on the understanding that resource requirements will be reviewed at the end of fiscal year 1985-86, following initial experience with the actual operation of the CASB (see page 13).

Canadian Centre for Occupational Health and Safety

1985-86 Estimates

Part III

Expenditure Plan

391

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Centre for Occupational Health and Safety

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $7,687,000 in support of the Canadian Centre for Occupational Health and Safety in 1985-86.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985–86 Main Estimates	1984–85 Main Estimates
	Canadian Centre for Occupational Health and Safety		
30	Program expenditures	7,687	5,045
	Total Program	**7,687**	**5,045**

Vote - Wording and Amounts

Vote No.	Department or agency (dollars)	1985–86 Main Estimates
	Labour	
	Canadian Centre for Occupational Health and Safety	
30	Canadian Centre for Occupational Health and Safety - Program expenditures	7,687,000

Program by Activities

Less:				
Income held over for Expenditures in Subsequent Years	.....	.....	.....	−125
	7,479	208	7,687	5,045

Section I
Program Overview

A. Highlights

Plans for 1985-86 include:

- the improvement of the delivery of service by expanding the number of organizations having direct electronic access to the Centre (see page 12);
- the improvement of the method of dissemination of occupational health and safety information by developing a pilot program utilizing interactive computer technology to provide easy to understand, trustworthy information usable at the worksite (see page 10).

B. Financial Summary

Funding requirements for the Centre for both the Estimates and the current fiscal year are presented in Figure 1.

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast 1984-85*	Change
Canadian Centre for Occupational Health and Safety	7,687	7,645	42
Planned person-years	148	138	10

* The 1984-85 Forecast is $2.6 million higher than the 1984-85 Main Estimates as a result of Supplementary Estimates. The increase is being used to expand the information collection analysis and dissemination services of CCOHS.

The increase of $42 thousand represents the net effect of an inflation adjustment on staff salaries and the transferring of funds for building services to Public Works in 1984 as a result of the change to a schedule B Crown corporation. The increase of ten person-years in the 1985-86 requirements over the 1984-85 Forecast is to improve the service to the public.

C. Background

1. Introduction

The Canadian Centre for Occupational Health and Safety was created to promote the rights of Canadians to a healthy and safe working environment, and to help reduce the personal and economic costs of accidents, illnesses and permanent disabilities incurred in the workplace.

The Centre's main concern and focus is to be the national information resource in occupational health and safety which provides access to relevant and trustworthy information and advice to support governments, employers, and labour in their day-to-day decisions at the worksite. To this end, the Centre operates an information and advisory service which answers inquiries about occupational health and safety in written or electronic form, suited to the inquirer.

2. Legal Mandate

The Canadian Centre for Occupational Health and Safety Act enacted in April 1978 provides for a Council of Governors representing government (federal, provincial and territorial), employers and workers which reports to Parliament through the Minister of Labour. The Centre is enabled by the Act to provide a range of services, and receives its operating funds from Parliament. The Centre does not have any jurisdiction, and operates under the power of persuasion. Under the Act, the clientele of the Centre is the working people of Canada. The program was begun early in 1980.

3. Program Objective

The objective of the program is to provide Canadians with information and advice about occupational health and safety which is trustworthy, comprehensive, and intelligible in order to facilitate responsible decision-making in prevention of and protection from occupational diseases and accidents.

In fulfilling its objective, the Centre has established the following sub-objectives:

- to promote occupational health and safety by providing a fully-developed service of information and advice, by human and electronic communication, publication, and other media, to all the principal interests, organizations, and communities concerned with occupational health and safety throughout Canada;

- to develop a team of highly-qualified scientists and professionals with special skills in information and advisory work, and to provide practicable guidance and support in the training of many other people in these special skills;

- to develop computerized information banks on occupational health and safety appropriate to the needs in Canada, and to organize access to them;

- to participate extensively in international information exchanges; and

- to develop an internationally significant paper, electronic, microform and photographic stock of information specialized to Canadian needs in occupational health and safety.

4. Program Organization for Delivery

Activity Structure: The Program has only one activity encompassing all aspects of its operation.

Organization Structure: The Canadian Centre for Occupational Health and Safety, which is located in Hamilton, is governed by a Council which meets three times a year, and reports to Parliament through the Minister of Labour.

The Council consists of the Chairman, twelve Governors representing provincial and territorial governments; four Governors representing federal departments or Crown Corporations; eleven Governors representing workers, and eleven Governors representing employers, all appointed by the Governor in Council. The Chairman and the other Governors serve without remuneration but may be paid such allowances and travel expenses for each day spent in connection with the work of the Centre as are fixed by the Governor in Council.

The Executive Board of the Centre, chaired by the President and Chief Executive Officer, consists of nine Governors elected annually from among the members of the Council of Governors, on a representative tripartite basis. The Executive Board is authorized to carry out the business of the Council between Council meetings.

The President and Chief Executive Officer has supervision over and direction of the work and staff of the Centre.

There are four Directorates through which the Program is delivered:

Technical Services: provides scientific and technical support to all functions of the Centre, including preparation of information and advice on occupational health and safety.

Information Systems Services: establishes and operates computerized information services through which information and advice are delivered.

Documentation Services: gathers, organizes and disseminates information in support of the information and advisory service.

Finance and Administration Services: provides centralized planning and financial control, management and support services, and other services necessary for the effective operation of the Centre.

Figure 2: 1985-86 Resources by Function ($000)

	$	P-Y
Council of Governors and Executive Board	437	5
Corporate Management	250	5
Documentation Services	1,179	32
Technical Services	1,756	43
Information Systems Services	1,365	34
Finance and Administration Services	2,700	29
	7,687	148

5. Program Description

In answering inquiries, the Centre draws on national and international data bases, as well as knowledge and experience of staff in medicine, toxicology, engineering, safety, and law, and presents this information in such a way as to meet specific workplace concerns. Some responses require several person-months to complete. Others, which are more quickly answerable, usually concern hazards of using unnamed ingredients in "trade name" chemicals. Hazard Summaries are published on various topics. Typical annual volume of items of service is in the order of 12,000 inquiries.

So as to provide a reasonable level of service to all Canadians on occupational health and safety, the Centre employs computer communications. The Centre's system, which is still in the pilot stage, is intended to provide data access, storage, manipulation, and publication.

In order to exploit such Communications more fully, government, employer and worker organizations are being connected directly to the Centre's computer, under the direction of the Council's Information Policy Committee. Government connections operate under the direction of tripartite Users' Committees. In addition, several educational, professional and international organizations are connected to the Centre's computer, on an information exchange basis. The present computer's capability allows for some 300 organizations to be connected through 60 channels.

Several of the Centre's computer information banks are either operational or under development, as follows:

CIOL (Chemical Information Online): This has two components, Trade Names and Cheminfo. Trade Names consists of manufacturers' material safety data sheets; Cheminfo describes the pure chemicals and ingredients of the trade name product. CIOL is operational and under continuous development.

INFODOC: This is the inventory of the Centre's document holdings, publications by Canadian organizations, and selected publications considered essential to topics specially important to Canadian occupational health and safety. INFODOC is operational and under continuous development.

RESOURCES: This is under development and will be an inventory of research on, and organizations and people involved in, occupational health and safety in Canada.

LIOL (Legal Information Online): This is a prototype under development for information in occupational health and safety legal matters.

Events: This is under development and will cover educational programs and significant events, such as conferences and meetings, dealing with occupational health and safety in Canada.

Hazard Recognition and Control: A feasibility study is being undertaken to determine the need for a computer information bank on hazard recognition and control.

The Centre makes available on-line important data bases developed outside Canada, as follows:

CIS/ILO: Created by the Centre international d'informations de sécurité et d'hygiène du travail of the International Labour Organization in Geneva, CIS/ILO is a multilingual, bibliographic data base on publications in occupational health and safety worldwide.

NIOSHTIC: Developed by the US National Institute for Occupational Health and Safety, NIOSHTIC is a bibliographic data base of scientific publications in occupational health and safety.

D. Planning Perspective

1. Environment

In occupational health and safety, the environment which existed at the time CCOHS was created was one of fragmentation and rising costs. That environment continues to exist. There were and are jurisdictions within jurisdictions; sovereignty was and is strong and infringements were and are resisted; there was and is duplication and little coordination and collaboration. There was and is a need for

coordination; there was and is a need for cooperative action on the part of all the social partners (government, labour, employer) but tripartitism is new and untried and not without problems; consensus brings compromises among conflicting interests. Information and advice possess wide importance for many strategies and policies aimed at reducing occupational illness and injury.

2. Initiatives

Encouraging Consultation and Cooperation: The Council will use its tripartitism to continue its new initiative, assisted by the Centre, to encourage consultation and cooperation among the Canadian jurisdictions and the participation of labour and management in establishing high standards of occupational health and safety. An example of these initiatives was the first meeting of Ministers responsible for workplace health and safety held on September 18 and 19, 1984. Their decision to establish a Working Group of Ministers, Governors, Chairman of Council and President of the Centre to explore practical ways in which the Centre could assist jurisdictions to coordinate their policies and programs, analyze strategies and act as a clearinghouse for information will be implemented in 1985-86.

Establishing a Computer Information Bank: The Centre is creating a resource consisting of a large and uniquely Canadian computer information bank at the rate of 22,000 records per year. In order to establish effective interchange among workers, employers, and government agencies across Canada, the Centre is expanding its electronic network. The experience of serving the needs of this community of occupational health and safety interests will provide the basis for the evolution.

3. Program Effectiveness

The Centre's initiatives will give governments, employers, and labour a national information resource where none previously existed; will support efforts to deal with the unsolved problems of occupational health and safety; will be a new approach; will assist governments in dealing with duplication and in ensuring effective use of resources.

The Centre's operation is under the constant scrutiny of its Council of Governors and has been subjected to a user satisfaction surveys. One survey, performed by an independent consultant, demonstrated a high level of satisfaction with the services provided, a result confirmed by the Centre's own continuous feedback (4.2 on a 5 point scale).

In addition, the Centre has underway a program evaluation that is intended to provide an overall assessment of the Centre.

4. Performance Information/Resource Justification

Figure 3 shows average response time and user satisfaction in response to inquiries from the general public. The program is continuing its efforts to maintain a high level of quality.

Figure 3: Number of Inquiries Completed, Average Rating, and Distribution

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Inquiries			
No. Inquiries completed	4,800	4,300	3,873
% of Inquiries completed within 4 weeks	70%	65%	60%
Average rating on 4 indicators of user satisfaction (clarity, completeness, usefulness, and timeliness)	84%	84%	84%
Distribution			
The Centre's publications	14,000	11,300	9,086
Other publications	14,000	12,700	11,193

Figure 4 shows the Centre's continued progress in creating the occupational health and safety data bases that, in the future, will bear the major burden of the demands of the general public.

Figure 4: Number of Computer Information Bank Occupational Health and Safety Records Created

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
No. of Records	25,000	22,000	18,000

Figure 5 shows the continued expansion of the electronic dissemination of information to organizations with special interests in occcupational health and safety. The multiplier effect of connecting large membership organizations is being exploited during the pilot stage, with proposed expansion, in 1987, to a nationally accessible service.

Figure 5: Cumulative Number of Connected Organizations

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Connected Organizations	200	70	12*
Regular Channels	60	30	6*

* The connections were restricted to these numbers by Cabinet decision. The restriction was lifted at the end of January, 1984.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

The Canadian Centre for Occupational Health and Safety 1985-86 Estimates include only authorities to be voted. Consideration on a full-cost basis must include services provided without charge. Details of such costs are outlined in Figure 8.

Figure 8: Total Cost of Program ($000)

	1985-86 Operating Expenditures	Add Other Costs*	**Total Cost**	1984-85 Total Cost
Canadian Centre for Occupational Health and Safety	7,687	267	**7,954**	7,645

* Other costs of $267 thousand represent accommodation provided without charge by Public Works.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Human Rights Commission

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Total Program	7,483,000	8,103,000	**7,368,437**

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86 the highlights of the Canadian Human Rights Commission Programs are:

- to maintain a proactive strategy with all our publics - employers/purveyors, unions, community groups and complainants, by consciously initiating activities in both public programming and enforcement (see pages 12 and 13);
- to increase the public's understanding of the Commission in terms of how its practices and procedures enable it to fairly and impartially implement the legislation (see pages 12 and 13); and
- to review the Commission's role in a number of policy areas that are evolving and that involve others e.g. affirmative action, equal pay for work of equal value (see pages 12 and 13).

2. Financial Summary

Figure 1: Financial Requirements ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Canadian Human Rights Commission	**9,344**	9,207	137
Authorized Person-Years	**159**	156	3

* There is no change from the 1984-85 Main Estimates (Extracts from Part II of the Estimates page 4).

Explanation of Change: The financial requirements for 1985-86 are $137,000 or 1.5% higher than the 1984-85 forecast expenditures. This increase is due to salaries and operating costs for three additional person-years required for workload increases associated with amendments to the Canadian Human Rights Act.

B. Recent Performance

1. Highlights

Highlights of the Program's Performance during 1983-84 are:

- The Commission continued to assign high priority to the handling of complaints in the area of systemic discrimination. Systemic discrimination is the pursuing of policies or practices which have an adverse effect on a protected class of individuals. Emphasis on class-based complaints increases the program's effectiveness in dealing with discrimination because it focuses on groups and issues rather than individuals. A tribunal decision ordering a special program as a remedy for past discriminatory practices, and increasing national attention to equal pay for work of equal value have increased demands for advice and assistance.

- The Commission increased its efforts in the preventative role of informing, educating and coordinating with employers, unions and groups by producing and publishing educational material, conducting seminars for special groups such as the disabled community and training staff of employers so that they can train others.

- With the proclamation of the Privacy Act on July 1, 1983, Part IV of the Canadian Human Rights Act was transferred to the Offices of the Information and Privacy Commissioners of Canada. This froze six person-years and $213,400 of the Canadian Human Rights funds during 1983-84 which could not be used for any other purpose. The Canadian Human Rights Commission paid all costs for the Privacy Commission during the period April 1 to June 30, 1983, after which the new commission assumed this responsibility.

- On March 30, 1983 Bill C-141 amending the Canadian Human Rights Act was approved by Parliament. These amendments cover the prohibiting of discrimination based on mental disability and provide protection to persons suffering from a physical or mental disability not only in matters related to employment, but also in the provision of goods, services, facilities or accommodation generally available to the public. $551,000 and five person-years were provided by Supplementary Estimates to finance the initial start-up of the expanded program.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Canadian Human Rights Commission	7,368	7,483	(115)
Person-Years	129	138	(9)

Explanation of Change: The difference between actual expenditures and person-year utilization and the Main Estimates resulted from the following:

- Reduction of the Main Estimates by $284,000 and eight person-years for transfer of the Privacy Commissioner from the Canadian Human Rights Commission to the Offices of the Information and Privacy Commissioners. An amount of $70,600 and two person-years was reinstated, making a net decrease of $213,400 and six person-years from the Main Estimates.

- Increase of $551,000 and five person-years by Supplementary Estimates to initiate start-up operations for amendments to the Act authorized by Bill C-141 less funds lapsed.

C. Background

1. Introduction

The Canadian Human Rights Commission combats discrimination within federal jurisdiction.

The Commission administers the Canadian Human Rights Act which prohibits discrimination on 10 grounds: race, colour, national or ethnic origin, religion, age, sex, marital status, family status, disability and conviction for which a pardon has been granted. It is empowered to investigate complaints of discrimination, to approve a resolution or settlement where discrimination is found and to end discriminatory policies and practices by means of education and research.

The Commission's authority encompasses all areas of federal jurisdiction including federal departments and agencies, Crown corporations, private companies which regularly transport goods or people across provincial or national borders, chartered banks, companies

which handle radioactive materials, inter-provincial or international pipelines, broadcasting companies and telephone companies doing business in more than one province.

The Commission reports to Parliament through the Minister of Justice.

2. Legal Mandate

The Canadian Human Rights Act, S.C. 1976-77, c. 33 was proclaimed in force on March 1, 1978. It was amended by S.C. 1980-81-82-83, c.111, 143, proclaimed in force on July 1, 1983.

3. Program Objective

To foster the principles that every individual should have equal opportunity to participate in all spheres of Canadian life consistent with his or her duties and obligations as a member of society.

4. Program Description

The Canadian Human Rights Commission handles all complaints of discrimination filed against federal departments or agencies, and the federally regulated portion of the private sector on the basis of the prohibited grounds specified in the Canadian Human Rights Act. Before dealing with a complaint the Commission must determine if it falls within its jurisdiction. Once this is established and a complaint is filed in a form acceptable to the Commission, it may assign an investigator to conduct an investigation of the particulars of the complaint. The findings of an investigation are submitted to the Commission which may make the following decisions, some of which are quasi-judicial in nature:

- decide not to act on a complaint;
- dismiss a complaint;
- refer a complainant to the proper authority;
- appoint a conciliator to attempt to bring about a settlement;
- approve settlements which have been agreed to by the parties; and
- appoint a tribunal.

The Commission also conducts information programs, provides advice, issues guidelines, conducts research, reviews regulations and other instruments, maintains close liaison with the Provinces and endeavours to discourage and reduce discriminatory practices.

5. Program Organization for Delivery

Activity Structure: The Commission has one Activity which is synonymous with the Program.

Organization Structure: The Commission consists of a Chief Commissioner, a Deputy Chief Commissioner, and from three to six other members appointed by the Governor in Council. The Chief Commissioner and Deputy Chief Commissioner are full-time members and the other members may serve either full-time or part-time. Full-time members are appointed for a term not exceeding seven years, and part-time members for a term not exceeding three years.

Branches through which the program is delivered are: Secretary General, Complaints and Compliance, Public Programs, Research and Policy, Administration, Personnel and Finance, and seven Regional Offices (see Figure 3).

Complaints and Compliance Branch: This branch is responsible for ensuring that complaints of discrimination filed with the Commission are investigated in an efficient and timely manner consistent with the principles set out in the Canadian Human Rights Act. The Branch is responsible for the development and implementation of policies and standards for all compliance activities. The Branch is also responsible for conciliation, and for providing advice, assistance and direction to staff in equal pay and systemic discrimination complaints and adaptation plans. In addition, the Branch plays a preventative role by providing advisory services to organizations coming under the jurisdiction of the Commission in order to help them review and modify their systems and practices so that they comply with the Act.

Public Programs Branch: This branch is responsible for the statutory requirements to develop and implement information training and consultative programs designed to increase public understanding and compliance with the Act, its principles and the Commission. The branch is comprised of:

Program Analysis and Development: Responsible for undertaking long-term planning and development of services and resources needed by the Commission's clients.

Information and Production: Responsible for the overall coordination of the Commission's public affairs and for the production of various informational material for the Commission's clients.

Program Delivery: Responsible for providing such services as information sessions, workshops and seminars.

Research and Policy Branch: This branch is responsible for supporting the Commission's decision-making process through applied research projects and development of policies on any number of human rights issues. Work from this Branch is in support of complaints processing, relations with other agencies and the public, representations to Parliament, and advice to employers and organizations serving the public.

The program is delivered from Headquarters in Ottawa and from seven regional offices located at: Halifax, Montreal, National Capital Region-Ottawa, Toronto, Winnipeg, Edmonton, and Vancouver.

D. Planning Perspective and Performance Review

1. Environment

Response to Public: Since its inception the Canadian Human Rights Commission has operated in an environment of steadily increasing public and media awareness of and interest in equality rights, fairness in employment and personal choice. This interest has been intensified by the inclusion of the Charter of Rights and Freedoms in the Constitution, and by amendments to the Canadian Human Rights Act particularly with respect to disabled persons. This has resulted in a steadily increasing public demand for information, advice, assistance and consultation. The public has high expectations in this area and particularly high expectations of the ability of the Canadian Human Rights Commission to be helpful.

Government Initiatives: The recent undertaking of the government to increase protection for disabled persons under the Canadian Human Rights Act has had implications for the work of the Canadian Human Rights Commission. In addition, a significant number of projects now underway in government departments have implications for the Canadian Human Rights Commission, inter alia: review of federal legislation to conform to the Charter of Rights and Freedoms; development of new labour market strategies; changes in social benefit programs; "human rights" initiatives; affirmative action in the public sector; accessibility standards.

Economic Climate: Continuing high unemployment and slow growth in the economy have put increased pressure on disadvantaged job-seekers. With a large pool of unemployed job applicants to choose from, employers may be less likely to select minority group members, women and disabled persons. Those who are refused employment opportunities in these circumstances are more likely to be frustrated, to perceive their minority group status, their handicap, or their sex to be a disadvantage, and to suspect that they have been unfairly treated. Current inquiries, requests for advice, and complaints of discrimination trends indicate that they will exceed present levels. Employers and Purveyors of Services, on the other hand, may be less ready to enter into structural and systemic changes to correct discriminatory practices.

Legal Challenges: Financial and human resource costs of litigation can be expected to remain high for reasons connected to the points noted above, namely, high public expectations, implementation of recent amendments to the Canadian Human Rights Act, and economic conditions. The Canadian Human Rights Commission has only limited control over the number of human rights tribunals, appeals, and other types of litigation in which it must become involved.

2. Initiatives

In 1985-86 the Canadian Human Rights Commission plans to undertake the following initiatives:

- Having experienced some success in increasing contacts with client groups, the Commission plans to concentrate on changing public perceptions among those who have resisted voluntary compliance with the Act. This will be done through the implementation of a number of new service kits and education material, as well as developing special interest publications and instructional aids.

3. Update on Previously Reported Initiatives

Several research programs were completed and contributed to the development of education materials. As well, several major publications were developed in response to public demand for information on human rights issues, for example:

- A series of studies were conducted of the Commission's compliance activities in order to identify areas where efficiency and productivity could be improved. In the area of equal pay it was decided to centralize compliance activities in the equal pay unit and more assistance was provided to employers in their efforts to comply with legislation.

- The initiative to improve productivity in the processing of complaints continues. Early issue identification and allegation analysis, as well as new procedures to deal more rapidly with more routine cases are being introduced.

4. Program Effectiveness

The demands for information and the level of participation in education programs has been very positive, precipitating development of subsidiary publications on issues of current interest (i.e. Sexual Harassment, Equal Pay, etc.).

Examples of direct results include:

- equal pay settlements, including CN nurses case;

- elimination of discriminatory questions on employment application forms by numerous employers;

- system-wide changes in policies - Treasury Board maternity policy adjusted;

- conciliation settlements - including policy changes; and

- tribunal decision ordering mandatory affirmative action program.

A Program Evaluation Plan for the Canadian Human Rights Commission is under development.

5. Performance Information/Resource Justification

Significant aspects of the work carried out by the program are the investigation of complaints of discrimination and responding to enquiries from the general public.

Figure 4: Enquiries and complaints

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Enquiries	31,000	30,500	30,048

Canadian Intergovernmental Conference Secretariat

1985–86 Estimates

Part III

Expenditure Plan

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Intergovernmental
Conference Secretariat

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $1,989,000 in support of the Canadian Intergovernmental Conference Secretariat in 1985-86. The remaining expenditures, estimated at $128,000 for contributions to employee benefit plans will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

The major focus of the Canadian Intergovernmental Conference Secretariat (CICS) is the provision of support services to intergovernmental meetings of First Ministers, Ministers, and Senior Officials. The program will continue these services in 1985-86 within a constant resource base, achieving the following goals:

- to provide services for one Federal/Provincial Conference of First Ministers and two Premiers' meetings at an approximate direct cost of $210,000 (see page 10);
- to provide services for preparatory meetings for First Ministers' Conferences and intergovernmental meetings at the ministerial and senior official level. The budget provides $398,000 for the direct cost of these meetings (see page 10); and
- to provide for the continuing distribution of public documents to public, university, and legislative libraries throughout Canada (see page 9).

B. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	Actual 1983-84
Canadian Intergovernmental Conference Secretariat	2,117	2,073	44	1,892
Person-years	25	25	—	25
Revenue	945	821	124	648

* The forecast 1984-85 represents no change from Main Estimates 1984-85.

The increase in resources in 1985-86 provides for price increases.

The Secretariat operational expenses are co-shared by the Federal and Provincial governments. The provincial shares are calculated in proportion to the population using the 1981 census. The fiscal year proportionate shares for the province of Manitoba will be absorbed by the Federal Government as this province does not at present contribute to the financing of operational expenses. It is estimated that total revenue will be $945,000 (see Supplementary Information, page 14).

C. Background

1. Introduction

The Canadian Intergovernmental Conference Secretariat was created by theFirst Ministers of Canada to serve federal/provincial and interprovincial meetings of First Ministers, Ministers and Senior Officials by providing all services required for their organization and administration. The Secretariat is an agency of both the federal and provincial governments and as such acts as a neutral intergovernmental body. Its budget is supported by both orders of government and its staff includes both federal and provincial public servants. The Secretary reports to governments annually. The operations are reviewed by a federal-provincial committee designated by their First Ministers. The Secretariat reports to Parliament through the Prime Minister.

2. Legal Mandate

The Canadian Intergovernmental Conference Secretariat was created and designated a department of the federal government by Order-in-Council November 19, 1973, pursuant to an agreement reached at the May 1973 meeting of First Ministers.

3. Program Objective

To provide administrative and support services for the meetings of First Ministers, as well as for federal-provincial and interprovincial meetings of ministers and senior officials.

4. Program Organization for Delivery

Activity Structure: The Secretariat has only one activity which is synonomous with the program.

Organization Structure: The Secretariat, located in Ottawa, is organized to deliver conference support services to intergovernmental meetings held at locations throughout Canada. The Secretary of Canadian Intergovernmental Conferences, appointed by Governor-in-Council, after consultation with provincial premiers, is the chief executive officer of the Secretariat.

There are three sections responsible for delivery of services:

- The conference Program Units, each managed by a Conference Officer, provide technical and logistical support for intergovernmental meetings.
- The Intergovernmental Document Centre provides document control, record management, public distribution and an archives for intergovernmental conference documents.
- The Administrative Services provide internal support for such matters as personnel staffing, pay, accounting, reception, security, communications and supply.

Figure 2 presents the allocation of resources across the organization.

Figure 2: Resources by Organization ($000)

	Office of the Secretary	Conference Program Units	Intergovernmental Document Centre	Administrative Services
$	299	1,149	300	369
PY	5	8	6	6

Additional personnel resources are provided as required for the duration of a conference requirement. These resources may be provided on an assigned basis from government departments or through personnel agencies.

5. Program Description

The Canadian Intergovernmental Conference Secretariat plans, coordinates and carries out administrative arrangements for intergovernmental conferences. This includes a conference secretary and liaison with delegations on behalf of the chairman, the preparation and circulation of the agenda, a conference program and related correspondence; printing, translation and distribution of conference documents; the provision of interpretation, media and security services; and the preparation of verbatim transcripts and other records of conference proceedings. The Secretariat provides coding and safekeeping of conference documents and an information retrieval service for governments related to this documentation. Public documentation is distributed to selected public, legislative and university libraries.

D. Planning Perspective

1. Environment

The Secretariat does not convene intergovernmental meetings. It is called upon to respond to decisions taken by governments to meet on national or specific issues. Decisions on timing of such meetings, their numbers, their location and duration are all factors beyond the control of the Secretariat. The level of expenditure is dependent upon these factors and rising costs.

2. Program Effectiveness

The measurement of effectiveness of the Canadian Intergovernmental Conference Secretariat is based on the following:

- ability to support effectively intergovernmental conferences within the financial limitations established by the federal and provincial governments;
- ability to deliver satisfactorily and equally to all governments the administrative and support services required by each intergovernmental meeting;
- ability to satisfy the information requirements of the Canadian public through regular and effective distribution of public documents to public, university, and legislative libraries throughout Canada; and by responding to requests for information on intergovernmental meetings; and

- ability to continue to develop as a neutral intergovernmental organization in support of eleven governments.

The program has satisfied and will continue to satisfy these requirements.

3. Resource Justification

For 1985-86 it is expected that the conference sectors will require $631,000 to meet direct costs of conferences served. Expenditures for salaries, overtime and supplies that are not apportioned by conference sector are provided for elsewhere in the budget.

First Ministers - $210,000: It is estimated that $210,000 will provide full conference services for one conference of First Ministers, one annual meeting of Provincial Premiers and one annual meeting of Eastern Premiers and New England Governors.

Other Conference Sectors - $398,000: The budget provides for support services to be provided to preparatory meetings leading up to one First Ministers' conference and meetings of Ministers or senior officials in sectors such as: Agriculture, Consumer and Corporate Affairs, Culture, Energy and Mines, Government Services, Health, Housing, Human Rights including Status of Women, Justice, Labour, Manpower, Municipal Affairs, Northern Development, Social Services/Welfare, Sport and Recreation, Tourism, and Transportation. The Secretariat must be responsive to requests. The forecasted expenditures are based on past experience, planned and anticipated activity but there are a number of unknowns such as number of meetings and locations that prevent determining the financial resource requirements with exactness. There are similarities in the program workload that prevail from year to year but nature, scope and timing are subject to change.

Other Requirements: A number of issues could be the subject of additional meetings in F-Y 1985-86. It is not possible to forecast their probability, resulting in the possibility that additional financial resourcing may be required during the fiscal year.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 3: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	913	882	752
Contributions to Employee Benefit Plans	128	115	125
	1,041	997	877

	1,068	1,068	1,008
Total operating	2,109	2,065	1,885
Capital	8	8	7
Total expenditures	2,117	2,073	1,892

2. Personnel Expenditures

Figure 4: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	2	2	1	50,530-96,300	64,144
Administration and Foreign Service	8	8	9	13,912-57,987	42,641
Administrative support	15	15	15	12,665-31,946	23,777

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the program. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, and promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 5: Cost Analysis ($000)

	1985-86	1984-85	1983-84
Operating expenditures	2,117	2,073	1,892
Less -			
Receipts credited to revenue - Provincial Government Contributions	945	821	648
Add-			
Accommodation provided without charge by Public Works	360	365	348
Other services provided without charge	20	29	24
Total Cost of Program	1,552	1,646	1,616

M-3

C. Co-sharing

The co-sharing formula excludes federal employee benefit plan, tenant services and capital.

Provincial shares using the 1981 population census are as follows:

	Population (%)	Amount
Newfoundland	2.3	$ 22,700
Nova Scotia	3.5	34,500
New Brunswick	2.9	28,600
Prince Edward Island	0.5	4,900
Quebec	26.5	261,700
Ontaro	35.5	350,600
Manitoba	4.3	42,500
Saskatchewan	4.0	39,500
Alberta	9.2	90,900
British Columbia	11.3	111,600
	100.00	$ 987,500

In the fiscal year 1985-86, the provincial contributions for Manitoba ($42,500) will be absorbed by the federal government, as this province does not contribute to the financing of the Secretariat at this time. It is estimated total receipts credited to revenue will be $945,000.

The federal share will be $1,172,000 as follows:

50% operating costs	$ 987,500
Plus: Employee Benefit Plan (Federal)	128,000
Plus: Tenant Services	6,000
Plus: Capital	8,000
Plus: Manitoba Share	42,500

1985-86 Estimates

Part III

Canadian International
Development Agency

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $1,594,808,000 in support of the 1985-86 Canadian International Development Agency. This includes non-budgetary expenditures of $239,800,000 for loans to developing countries and international development institutions. The remaining expenditures, estimated at $132,192,000 for contributions to employee benefit plans and payments to the Asia-Pacific Foundation of Canada and non-budgetary expenditures in respect of the encashment of notes issued to international financial institutions and development banks will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

In an effort to help developing countries achieve self-sustainable economic and social development in accordance with their needs and environment, over the past three decades Canada has been providing Official Development Assistance (ODA). The major responsibility centre for ODA is the Canadian International Development Agency (CIDA), which consists of one program, the International Development Assistance (IDA) Program (see page 11 for further details). In addition, Canada's Official Development Assistance program includes financial support for the World Bank through the Department of Finance; the activities of the International Development Research Centre; the activities of the Petro-Canada International Assistance Corporation under the Estimates for Energy, Mines and Resources; and overseas development administration and some contributions to international organizations included in the Estimates of the Department of External Affairs.

Since ODA is a long-term investment, the results of the efforts of developing countries and foreign assistance cannot be observed on a year-to-year basis. Yet when one looks back upon the past two decades, it is apparent that development efforts in the developing world as a whole have achieved substantial progress; for example, a doubling of real per capita incomes, dramatic increases in life expectancy and adult literacy, and sharp reductions in child death rates in the Third World (see page 17).

While the development effort of the past several decades has been largely the work of the developing countries themselves, in that only some 13 % of the total investment in these countries has come from external sources, the foreign aid provided by Canada and other donor countries has played a vital role by providing essential technical and material assistance, without which progress would have been much slower. Canada believes that further progress will require continuing development assistance and that moreover this progress is essential to Canada's own interest in international peace and security and to the attainment of our economic goals as a trading nation. For these reasons Canada's current plans are to devote 0.5 % of GNP to ODA in 1985.

For fiscal year 1985/86, IDA expenditures are estimated at more than $1.7 billion to provide assistance to developing countries by:

- contributing to the implementation of over 900 development projects overseas (see pages 26 to 29);
- providing over 600,000 tons of cereals, and substantial quantities of vegetable oils, skim milk powder, fish and other food items for humanitarian and developmental purposes (see pages 27 and 33);

- supporting the development efforts of over 400 Canadian non-governmental organizations and institutions, as well as providing incentives for developing mutually-beneficial contacts between over 250 Canadian firms and their counterparts in the developing countries (see pages 25 and 28);

- supporting those programs of international organizations which are best-suited to deal with many global development problems; for example, Canada will support UNICEF's programs to improve the health of children, the United Nations Development Program's efforts to upgrade technical and administrative skills in the developing countries, and international financial institutions' efforts to mobilize large amounts of private capital for major development projects (see pages 31 to 35); and

- providing an effective response to disasters abroad (see page 34).

The returns to the Canadian economy from the IDA Program in 1985/86 include estimated procurement of Canadian goods and services in excess of $1 billion, substantial and widespread employment throughout the Canadian economy, and the expansion of Canadian exports.

B. Financial Summary by Activity

Figure 1 : Financial Requirements by Activity ($000)

	Estimates 1985/86	Forecast 1984/85	Change	For Details See Page
Budgetary				
Country to Country Cooperation	968,666	900,892	67,774	23
International Initiatives	357,612	325,201	32,411	30
Corporate Services	35,522	37,420	(1,898)	36
	1,361,800	1,263,513	98,287	
Non-Budgetary				
Country to Country Cooperation	233,200	218,387	14,813	23
International Initiatives	132,000	132,277	(277)	30
	365,200	350,664	14,536	
Total Requirements	1,727,000	1,614,177	112,823	
Authorized person-years	1,161	1,157	4	

Explanation of Change: The financial requirements for 1985/86 are 7.0 % or $112.8 million higher than the 1984/85 forecast expenditures. This increase is primarily due to:

- Increase in Grants and Contributions of $98.0 million;
- Increase in Loans, Advances and Investments of $14.5 million;
- Increase in Operating Costs of $0.3 million.

Explanation of 1984/85 Forecast: The 1984/85 forecast (which is based on information available to management as of October 31, 1984) is $30.0 million or 1.8% lower than the 1984/85 Main Estimates of $1,644.1 million (Extracts from Part II of the Estimates, page 4). The difference of $30.0 million reflects the following major offsetting items:

- A net Supplementary Estimate of $4.4 million reflecting additional Operating Costs requirements;
- A decrease of $34.4 in Loans to developing Countries and Contributions and payments to International Financial Institutions.

C. Background

1. Introduction

As mentioned earlier, Canada's efforts toward assisting in international development is referred to as Official Development Assistance (ODA). The Canadian International Development Agency (CIDA) is the department responsible for the largest portion of this assistance, which is carried out through CIDA's International Development Assistance (IDA) Program . The following portions of ODA are not undertaken within the IDA Program:

- Canadian support for the International Bank for Reconstruction and Development and the International Development Association, which together are commonly referred to as the "World Bank", is included in the Estimates under the Department of Finance;
- funding of the International Development Research Centre. This is included in the Estimates under External Affairs;
- overseas administrative functions relating to Canadian development assistance and certain contributions to international organizations considered to be ODA under internationally agreed standards are included in the Estimates under External Affairs; and
- programs of the Petro-Canada International Assistance Corporation, which are included in the Estimates under Energy, Mines and Resources.

Figure 2: Official Development Assistance Expenditure Breakdown (millions)

Department/Agency	Estimates 1985/86		Forecast 1984/85	
	$	%	$	%
CIDA (excluding operating expenditures)	1,718	74.9	1,613	75.1
International Financial Institutions (Department of Finance)	324	14.1	252	11.7
International Development Research Centre	86	3.8	81	3.8
External Affairs (excluding operating expenditures)	29	1.3	29	1.4
Petro-Canada International Assistance Corporation	30	1.3	73	3.4
Operating expenditures applicable to ODA	106	4.6	99	4.6
Gross ODA	2,293	100.0	2,147	100.0
Loan Repayment	(43)	-	(36)	-
Net ODA	2,250	-	2,111	-

Figure 3: 1985/86 ODA Program

The multi-facetted nature of the problems of international development necessitates close collaboration with a wide range of partners in Canada and overseas. Since the development effort involves nearly all sectors of society, CIDA must draw on the expertise of hundreds of Canadian private firms, voluntary organizations, many federal and provincial government departments, and of course the governments, institutions, and voluntary organizations of the developing countries themselves. In addition, the interdependence of development policies with other aspects of Canada's foreign policy requires on-going working relationships with such departments as External Affairs, Finance, and Agriculture, as well as the Export Development Corporation, other aid-giving countries, the United Nations, the World Bank and other multilateral organizations.

2. Legal Mandate

CIDA is designated as a "department" for the purposes of the Financial Administration Act by Order in Council P.C. 1968-9-23 of May 8, 1968. It acts under the aegis of the Secretary of State for External Affairs (SSEA). The authority of the SSEA and of CIDA for the IDA Program and related purposes is found in the new Department of External Affairs Act, in the Annual Appropriation Acts and in the International Development (Financial Institutions) Continuing Assistance Act.

3. Program Objective

The objective of the IDA Program is as follows:

- to facilitate the efforts of the peoples of developing countries to achieve self-sustainable economic and social development in accordance with their needs and environment, by cooperating with them in development activities; and

- to provide humanitarian assistance;

thereby contributing to Canada's political and economic interests abroad in promoting social justice, international stability and long-term economic relationships, for the benefit of the global community.

The sub-objectives of the IDA Program are outlined in Section II in relation to each Activity.

4. Program Organization for Delivery

Activity Structure: The IDA Program is composed of three activities as illustrated in Figure 4.

Figure 4: Activity Structure

The Country to Country Cooperation Activity is the largest and is divided into four sub-activities. The Direct Country Assistance sub-activity involves assistance in the form of projects and programs provided by Canada on a government-to-government basis to selected countries and regional institutions in these geographical areas. Bilateral Food Aid covers the transfer of food commodities on a country to country basis. Development Cooperation and Development Education includes support for the overseas development efforts of provincial governments, Canadian non-governmental organizations and institutions, and for programs to increase public participation in international development. Finally, Business Cooperation refers to the support provided to the Canadian private sector to support their international development initiatives.

The second largest activity, International Initiatives, has five sub-activities. International Financial Institutions cover Canadian support of regional development banks such as the Asian Development Bank. The Multilateral Food Aid Sub-Activity includes food aid provided through international organizations as well as certain coordination and evaluation functions relating to all CIDA food aid. Multilateral Technical Cooperation refers to support for U.N. bodies engaged in international development, and also includes contributions to selected Commonwealth, Francophone and other multilateral organizations. International Humanitarian Assistance involves support for international institutions, non-governmental organizations and governments responding to natural and man-made disasters. International Non-Governmental Organizations (INGO) provides for support to international non-governmental organizations, such as the International Planned Parenthood Federation, which are involved in development cooperation.

The "Corporate Services" activity involves the provision of advisory and support services to CIDA in such areas as executive functions, policy formulation, public affairs, and personnel and financial services.

Figure 5 shows the 1985/86 percentage breakdowns for these activities and sub-activities.

Figure 5: IDA Program - Percentage Breakdown by Activity, 1985/86

Organization Structure: The relationship between CIDA's organizational structure and the activity structure, together with a breakdown of 1985/86 resources, is shown below.

Figure 6: 1985/86 Resources by Organization/Activity ($ millions)

Activity	Asia Branch	Anglo-phone Africa Branch	Franco-phone Africa Branch	Americas Branch	Profes-sional Services Branch	Opera-tions Services Branch	Business Coopera-tion Branch	Oil and Gas Explo-ration	Special Pro-grammes Branch	Multi-lateral Branch (1)	Corpo-rate Branches (2)	1985-86 Main Estimates
Country to Country Cooperation	276.5	161.1	169.2	123.3	7.9	36.7	38.0	30.0	161.7	197.5	-	1,201.9
International Initiatives	-	-	-	-	-	-	-	-	19.9	469.7	-	489.6
Corporate Services	-	-	-	-	-	-	-	-	-	-	35.5	35.5
Total Agency Resources	276.5	161.1	169.2	123.3	7.9	36.7	38.0	30.0	181.6	667.2	35.5	1,727.0
Person-Years	87	80	82	81	118	119	40		81	37	436	1,141

1 Although the Multilateral Branch coordinates planning for both Bilateral and Multilateral Food Aid, the responsibility for Bilateral Food Aid rests with the Area branches and Special Programs Branch.

2 The corporate branches contain the expenditures of the offices of the President and the Senior Vice-President, Policy Branch, Comptroller's Branch, Personnel and Administration Branch, and Public Affairs Branch. See figure 12 (page 36) for a complete breakdown of these expenditures.

D. Planning Perspective

1. The Environment in the Developing Countries

The planning and implementation of the IDA Program and its annual allocations are affected by two major factors: the current situation in the developing countries, and Canada's general foreign policy interests.

Significant economic and social progress over the past two decades has been achieved in the developing countries. In social terms, real income per person has more than doubled; primary school enrollment and adult literacy rates have also doubled; and life expectancy in the poorest countries has increased from 41 to 59 years. The death rate in those countries among children between one and four years old has gone down from 27 per thousand in 1960 to 11 per thousand in 1982.

In agricultural terms, India and Pakistan, which together account for more than one-third of the total population in low-income countries, have become self-sufficient in cereal production. Other developing countries, like Brazil, have rapidly expanded their manufacturing production and become important industrial states.

In economic terms, the output of the developing countries has grown rapidly, even during the recession in the mid-1970's. At that time their Gross Domestic Product continued to grow by about 5 % a year, although some countries fared better than others. The output of the middle-income countries in East Asia and the Pacific actually grew at a rate of 8.6 % annually between 1973 and 1979. By contrast, per capita incomes fell in some of the low-income countries with high population growth rates (i.e. Sub-Saharan Africa).

The latest recession has had a more profound impact however. According to the 1984 World Bank Development Report Gross Domestic Product (GDP) growth rates in the developing countries declined to 2.5 % in 1980 and continued to decline to 1.6 % in 1983. The demand for their exports has fallen drastically, while the cost of borrowing has increased. Overall, the prices of primary products in relation to those manufactured reached a post World War II low in 1982. For the low-income countries, this deterioration in terms of trade is perhaps more serious than the effects of the debt problem.

The availability of foreign capital declined abruptly after 1981. By 1983, the flow of commercial finance was reversed and developing countries were actually paying out more to their creditors in capital and interest than they were receiving in commercial loans. A number of countries faced debt-servicing difficulties and $67 billion of debt had to be rescheduled.

A large number of these reschedulings were in Africa. Although the size of Africa's debt is not large in relation to other regions like Latin America, the debt is large in relation to the individual budgets of the countries involved. The most serious problem for these countries was the

decline in official aid, i.e. falling from $2.6 billion in 1980 to $1.7 billion in 1982. This problem will be further aggravated by the lower than expected level of financing for the 7th replenishment of the International Development Association, the World Bank's soft loan window.

In addition to these external constraints, Africa is also facing severe internal shortages of skilled manpower, and a drought which has decreased the already low per capita food production. The famine in Ethiopia which suddenly gripped public attention in the fall of 1984, is symptomatic of the problems facing other African countries. The future of these countries depends partly on improving external conditions and partly on improving internal policies. Increased development assistance will be needed to stave off disaster and to make the transition from underdevelopment to development easier.

The prospects for the future in other developing regions are better. Asia has managed to maintain growth, although massive problems of poverty, disease and illiteracy remain. Countries in the Americas have been less fortunate and it is here that the debt problem is greatest. Civil strife and political tension have exacerbated the problem in some countries. Still, the region as a whole has a strong base on which to build.

In delivering this assistance, several special factors distinguish the IDA Program from those of most other Canadian government departments:

- development projects are implemented in a sovereign foreign country and are therefore never under CIDA's sole control;
- the constraints which create the need for development assistance also create problems in delivering that assistance, i.e. inadequate physical and administrative infrastructure;
- development projects are implemented in fragile economies and often unpredictable political circumstances, which require flexibility and adaptability;
- geographical distances and cultural and linguistic differences complicate the administration of aid projects.

Given these circumstances, successfully completing development projects on schedule and within budget presents a special challenge.

2. The Environment in Canada

The IDA Program has been guided by a policy framework developed over a period of years and related to specific targets or general guidelines. The main features of this framework, including the objectives of development assistance, the program shares, the sectoral priorities, the regional and country allocations, and other programming or administrative issues are under review by the Government as part of an overall review of Canada's external relations.

Volume of Assistance: The Government is committed to reaching the target of 0.5 % of GNP in 1985. It has also reaffirmed its commitment to reasonable growth in budgets over the next decade to achieve 0.6 % of GNP in 1990, and to reach a target of 0.7 % of GNP allocated to aid expenditures by 1995.

Funding of the Voluntary Sector: Non-governmental organizations and institutions are able to harness the skills and initiative of a broad spectrum of Canadians to deliver projects which are closely linked to the needs of the poorest people in the developing countries. The government is proposing increased funding to this sector.

Special Funds for Africa: A $50 million Special Fund for Africa with specific initiatives for Ethiopia, was established in 1984/85, and a Coordinator for African Famine Relief was appointed. These funds are being used to support initiatives undertaken by non-governmental organizations and to provide additional humanitarian relief assistance and food aid. Projects to improve water supplies and agricultural production will be developed to help provide longer-term solutions to the problems in Africa.

3. Program Effectiveness

Estimating the overall impact of Canada's IDA Program is complicated by a number of factors:

1. Official Development Assistance represents only a modest source (i.e. under 20 %) of the funding of the average Third World country's economic and social development activity. Most developing countries generate the bulk of their funds from domestic savings and investment, private sector foreign investment, and public sector foreign investment.

2. The average developing country receives ODA from about 20 bilateral donors and multilateral agencies, so it is difficult to isolate the degree or kind of impact that one donor has on development.

3. Canada has traditionally been the sixth to eighth largest bilateral donor among DAC members. Our leverage to influence the quality and quantity of developmental activity is therefore marginal in many instances.

4. Development is a long-term, high-risk process involving changes in the foundations of a society. Many ODA-financed projects require more than a decade of involvement and investment to achieve the desired economic and/or social objectives.

5. Most development programs involve costs and benefits (as well as inputs and outputs) which are not easily identifiable or quantifiable. The statistical data base in most developing countries is also weak, due in part to the relatively large traditional (i.e. non-monetary) sector of the economy.

In addition to these factors, corporate or program level assessments tend to be highly qualitative because Canada's ODA program utilizes a number of direct and indirect delivery channels or transfer mechanisms. The multilateral program utilizes some 85 international institutions, in conjunction with funding from other donors, to provide humanitarian and developmental assistance to the more than 140 developing countries which comprise the Third World. Similarly Canadian NGO's are active in international development and play an intermediary role in attracting contributions from public and private sector donors.

These problems do not exist to the same degree at the project or activity levels. It is possible to determine to some extent whether a particular project has achieved its objectives, the extent and nature of its impact on the intended target group or beneficiairies, and the efficiency with which the resources were employed. CIDA conducts a variety of evaluations and appraisals, some of which are mentioned in the next section.

4. Developmental Impact

(a) **Country to Country Cooperation:** An independent evaluation of three of CIDA's country programs has been conducted by the North-South Institute. The evaluations on Tanzania and Bangladesh were published in 1983, and the one on Haiti was published in 1984. The Institute's objective was to generate greater public understanding and discussion of development questions by integrating the social, political and economic aspects of development in a country with the range of interests and policies which influence the Canadian aid program.

The key issues identified by the Institute in the studies were the problems of partnership between Canada and the developing countries, the need to reconcile many objectives within the aid program, and the constraints to the delivery of an effective program. A number of recommendations were made to address the constraints identified and to increase effectiveness, including untying aid, increasing technical assistance, giving more support to agriculture and rural development, targetting more food aid to the poorest, trying to influence recipient government policies more, relaxing regulations, increase decentralization through increasing personnel in the field, and clarifying aid objectives. CIDA has welcomed the reports as a valuable contribution to the design and implementation of programs and has already implemented some of the studies' recommendations in the country concerned.

CIDA has also conducted its own reviews of its country programs and projects on a continuing basis. A report synthesizing the result of bilateral evaluations carried out between 1981 and 1983 was prepared by consultants for CIDA in 1984. The review offered a critical retrospective from which the Agency could derive lessons, both developmental and operational, to assist it in defining and planning future activities.

Only a small sample of CIDA's projects (62) and programs (13) were covered by the review but these included the main sectors in which CIDA is involved. At the developmental level, the review concluded that the majority of projects and programs had positive results in terms of their rationale, their impact on target groups, and their benefits for Canada. At the operational level, the results were less encouraging, particularly at the planning stage of projects. A number of the problems which were identified are not unique to CIDA, however, but are common among all development agencies. Many of them also relate to projects which were planned five to seven years ago, using operating methods which have subsequently been revised. The analysis and conclusions of the review have been distributed within the Agency for follow-up and as background material.

In addition to government to government project evaluations, the IDA Program has undertaken a number of organizational assessments of the major partner institutions and NGOs supported through the voluntary sector activity. Indications are that these channels offer good value for the money allocated to them and generally reach the people for whom they are intended. The main constraint appears to be the paucity of administrative resources among some of the voluntary agencies.

(b) **International Initiatives:** A review conducted by the World Bank's Operations Evaluation staff of 130 projects approved in the 1970's, gives an indication of the effectiveness of the international financial institutions in promoting development. The review found that 94 % of the total investment in the projects had achieved its major objectives, and that the economic rates of return for most of them exceeded 10 %. For example, the 49 agricultural projects reviewed had an average economic rate of return at audit of 19.5 %.

(c) **Future Evaluations:** At the corporate level the Agency's Evaluation Workplan envisages the following studies:

- a food aid evaluation scheduled for completion in March 1985;
- an evaluation of the NGO Program for February 1985;
- Phase I of a Human Resource Development/Education Evaluation for April 1985;
- an assessment of lines of credit; and
- an assessment of the railway subsector.

A program Evaluation Support and Coordination Unit has been created within CIDA'S Evaluation Division to provide professional support to the seven program branches, to improve linkages between corporate and program/project evaluations, and to enhance the application of evaluation results to policy formulation and programming.

5. Impact on the Canadian Economy

Although conceived and supported essentially for its benefits to people in the developing countries, the IDA Program brings substantial returns to the Canadian economy. About three-quarters of government-to-government project

and program assistance was spent on Canadian goods and services in 1984/85. In addition over four-fifths of the food aid budget is spent in Canada; and two-thirds of disbursements to the regional development banks are returned to Canada in the form of service contracts or equipment purchases. In total, an estimated $1.1 billion worth of Canadian goods and services was purchased under the IDA Program in 1984/85.

Estimated Breakdown of IDA Program Expenditures on Goods and Services Originating in Canada 1984/85 ($000)[1]

Country-to-Country Cooperation	
- Direct Country Assistance	$ 533,800
- Bilateral Food Aid	174,700
- Development Cooperation and Development Education	54,300
International Initiatives	
- International Financial Institutions	123,800
- Multilateral Food Aid	126,200
- Multilateral Technical Cooperation	33,900
- International Humanitarian Assistance	2,100
- International Non-Governmental Organizations	700
Operating Expenditures	61,900
TOTAL	$1,111,400

1 Based on allocations in 1984/85 Main Estimates.

In addition to employment impact, the IDA Program also has the potential to create export markets for Canada. CIDA works with the Export Development Corporation in co-financing projects which meet the criteria of both agencies. Seventeen projects have been co-financed since 1978, and are expected to generate over $750 million in Canadian procurement. Seventeen more projects are already in the pipeline. Co-financing with Arab aid agencies of over 38 projects with a total value of over $8 billion has also provided substantial export opportunities. The Industrial Cooperation Division further increases the potential for export growth by encouraging mutually beneficial contacts between Canadian firms and their counterparts in developing countries.

The ODA Program also has the benefit for Canada of enhancing the awareness of Canadians about global interdependence and the need for international peace and stability if Canada's own objectives are to be achieved. The knowledge and skills of Canadians are broadened by enabling them to play an active and effective role in Canada's development program. The international institutional framework and the network of personal relationships which are crucial for efforts to promote social justice are also strengthened.

Section II
Analysis by Activity

A. Country to Country Cooperation

Objectives

- to cooperate with developing countries and regional institutions in programs and projects designed to foster their economic and social development, including transfers of Canadian goods, services, technology and expertise;
- to support Canadian organizations in their programs and projects of development cooperation with the peoples and organizations of developing countries; and
- to foster greater knowledge and understanding amongst Canadians of international cooperation and development.

Resource Summary

The Country to Country Cooperation Activity accounts for 68.7 % of the IDA Program budget in 1985/86.

* Of the total 1985-86 operating expenditures, 83.9 % is for personnel, 12.2 % is for transportation and 3.9 % is for all other costs.

Description

Country to Country Cooperation is composed of four sub-activities.

Direct Country Assistance: This sub-activity couprises the following elements: Asia Development Assistance, Anglophone Africa Development Assistance, Francophone Africa Development Assistance, Americas Development Assistance, Operations Services, and Professional Services. Government-to-government projects and programs, managed by the four geographical branches of CIDA, may include the provision of expert services and training, manufactured goods ranging from agricultural and industrial equipment to medical supplies, lines of credit for the purchase of Canadian goods, and assistance in the form of commodities such as potash, an essential fertilizer, and aluminum, which is used in applications ranging from cooking

pots to power lines for rural electrification. Individual projects vary in size from a few thousand dollars to tens of millions of dollars and are often co-financed with other development agencies. All projects are developed in cooperation with the host government and are implemented by one of its departments or a non-governmental organization or institution in the developing country. They normally involve experts and technicians sent abroad either under direct contract to CIDA or through a Canadian "implementing agency" such as a private firm or university.

The content of each of the IDA programs in each country is based both on an analysis of the needs of individual countries and an assessment of Canadian capabilities to meet those needs. More and more use is being made of Canadian non-governmental organizations that may already be operational in the field or have unique capabilities to undertake specific tasks. In response to the major problems facing developing countries (see page 17), the Agency's priority sectors are: agriculture and food, energy, and human resource development. However, in view of the diverse needs of particular developing countries, support is also given in such areas as transportation, communications, industry and social development.

CIDA's Professional Services provides technical expertise in project planning and execution, and manages the process of selecting Canadian firms to implement CIDA projects. Experts on the staff of the Professional Services Branch include specialists in such fields as water and sewerage, public health, transportation, mining, forestry, fisheries and energy.

Operations Services Branch is responsible for the coordination of initiatives from geographic areas, the control of procurements, the technical aspects related to contracts, the briefing centre and the administrative functions for legal services.

Bilateral Food Aid: Assistance in the form of bilateral food aid is given by Canada on a government to government basis or through non-governmental agencies. (Multilateral food aid is provided through multilateral institutions such as the World Food Program, and is covered under the International Initiatives Activity (see page 33)).

Development Cooperation and Development Education: Encompasses financial support for the overseas development programs and projects of provincial governments, and non-governmental organizations and institutions. It also includes support for the public participation programs of many of these organizations to encourage participation of the public in international development activities in Canada and abroad. Examples of CIDA's partners in these areas, receiving funding through the Public Participation Program, are Canadian non-profit organizations involved in international development, educational institutions, and business, labour, church, cooperative and professional organizations.

Business Cooperation: This sub-activity provides a focal point for liaison with the private sector and the development of policies including concessional financing activities and the Agency's dealing with the Export Development Corporation and the Export Trade and Development Board.

Through the Industrial Cooperation Program, the Canadian Business Community is encouraged to increase private investment, transfer Canadian technology, and undertake joint ventures, as a means of strengthening mutually beneficial economic relationships between Canada and the developing countries.

Performance Information/Resource Justification

Under the Country to Country Cooperation Activity in 1985/86, CIDA plans the following:

Direct Country Assistance: Over $700 million has been allocated to the four geographic regions in order to contribute to the implementation of more than 900 development projects. This objective will be accomplished by providing project and program advice to the host country governments and by financing the provision of goods and services.

All of these projects are aimed at improving living standards and economic productivity in the developing countries. Canada concentrates 75 % of its assistance in 31 core countries and regional groupings: eight in Asia, seven in Anglophone Africa, nine in Francophone Africa, and seven in the Americas. While goals and strategies vary considerably between individual countries, the following generalizations may be made about the orientation of the IDA Program in each of the four geographical regions.

Asia: $276.5 million has been allocated for programs in Asia in 1985/86, amounting to 17.5 % of the total IDA Program. India, Bangladesh, Indonesia, Pakistan, Sri Lanka, China, Thailand and Nepal are the major Asia programs. Most projects will be concentrated in the agriculture, energy and social development sectors. Increasing use will be made of non-governmental organizations in implementing grass-roots activities for social and human resource development.

Anglophone Africa: In this region, the fundamental development priorities are agriculture, social development and basic infrastructure. Accordingly, most of the $161.1 million allocated for programs in Anglophone Africa (9.0 % of the total IDA Program) will be concentrated on increasing agricultural productivity, and in promoting human resources, energy and transportation development. Kenya, Tanzania, Zimbabwe, Egypt, Zambia, Ghana, and the Southern African Development Coordinating Committee (SADCC) are the principal programs in Anglophone Africa.

Francophone Africa: This region has been allocated 9.0 % of the total IDA Program or $169.2 million in 1985/86. The overriding development problem in Francophone African countries is food production and food security (i.e., the assurance of food availability); programs will therefore emphasize integrated rural development, institution building, and assistance to small farmers. Major countries of focus are Cameroon, Niger, Senegal, Mali, Burkina Faso, Zaire, Ivory Coast, Rwanda and Guinea.

Americas: Programs in the countries of Latin America and the Caribbean have been allocated $123.3 million in 1985/86, representing about 6.7 % of the IDA Program total. The Leeward and Windward Islands, Peru, Jamaica,

Guyana, Haiti, Honduras and Colombia are the principal programs in the Americas region. The major sectoral priorities are forestry, energy, infrastructure, and grass-roots social development.

In planning and implementing projects and programs in the developing countries with which Canada cooperates, certain measures are taken to ensure that activities are conducted in the most efficient and effective manner possible. CIDA is in continuing dialogue with governments of developing countries, other donors, and with implementing agencies in the Canadian private sector to keep abreast of the changing circumstances affecting each program and to ensure that the implementation of projects is in accordance with the priorities of Canada and the developing countries. This process is carried out through, for example, regular field visits and donor consortia meetings, and special sectoral and planning missions. The staff of the Department of External Affairs in the 35 Canadian posts in the developing countries play a central role in this process. These consultations are reinforced by internal CIDA analyses which assess the effectiveness of previous cooperation efforts and set priorities for the future.

Except for very small projects, CIDA's ongoing projects are managed according to Plans of Operation which set out a schedule of activities to maximize the achievement of project purposes, and to lay the basis for any possible subsequent evaluation of the project. Furthermore, CIDA manages its projects through a project team which brings together the project and planning officers from the geographic branch with the principal resource officers from the Professional Services Branch, each having specific responsibilities in the development and monitoring of the progress of each project. The technical input of resource specialists are instrumental in the effective delivery of all government-to-government projects.

The effectiveness of the Country to Country Activity is enhanced by concentrating Canadian aid in core countries and priority sectors, and by the extensive use made of the best available expertise from the Canadian business community and non-governmental sector.

Bilateral Food Aid: $197.5 million has been allocated to direct bilateral food aid to meet both developmental and humanitarian objectives.

The principal commodities provided are wheat and other cereal products, which make up about 75 % of total Canadian food aid, and vegetable oils, skim milk powder, fish and other food items which account for the remainder. Under the International Food Aid Convention, Canada has committed itself to provide 600,000 tonnes of cereals annually, through both government-to-government and multilateral channels. In addition to its humanitarian purposes, Canada's food aid also provides the governments of developing countries with the assurance of adequate food availability in order to carry out necessary policy reforms, and in many cases allows them to generate resources for development projects through the sale of this food.

Two years ago, CIDA revised its policies and procedures and was able to achieve economies of an estimated $7.5 million in 1984/85 through procurement and transportation of food by bulk purchases and shipments and through enhanced expertise and up-to-date market information.

Development Cooperation and Development Education: This sub-activity has been created to support the contributions to Third World development of over 400 Canadian non-governmental organizations and institutions, as well as the contributions of the Canadian business community and provincial governments. $161.7 million has been allocated to this program to support between 2,000 and 2,500 programs and projects in more than 100 countries.

Special Programmes Branch which is responsible for this sub-activity has been the fastest growing element of the IDA Program. Experience has shown that non-governmental organizations and institutions can be particularly effective in accomplishing certain key development tasks, in particular in community work at the grass-roots level. Recipients of CIDA Special Programmes support have included organizations such as CARE Canada, Help the Aged, CUSO, the Canadian Executive Services Overseas (CESO), World University Service of Canada, Canada World Youth, the Canadian Labour Congress, and Cardinal Léger et Ses Oeuvres, and various church groups, universities and colleges. This list is merely indicative of the approximately 400 organizations which the IDA Program has supported.

In determining appropriate levels of support for the Canadian non-governmental institutions, CIDA assesses the organizational and financial capabilities of these bodies and of the development effectiveness of the programs and projects which they submit for funding. The efficiency and effectiveness of the Special Programmes sub-activity is also indicated by the catalytic role that the IDA Program plays in this area by encouraging contributions of money and time from Canadians in the private sector. This is accomplished through matching contributions and grants. In 1982, the latest year for which comparative figures are available, the private donations of Canadians to the development programs of non-governmental organizations exceeded $215 million. By volume, this placed Canadians third in the Western world, after Americans and West Germans, in their private contributions to international development. In addition to their financial contributions, many thousands of Canadians also volunteer their time and effort to help operate these organizations and to carry out their fund raising and public education activities.

Business Cooperation: This sub-activity was created in 1984/85 to highlight CIDA's joint efforts with the business community to encourage international development activities. An amount of $38.0 million has been allocated to this sub-activity in 1985/86 and these funds will support approximately 1,500 initiatives undertaken by the Canadian private sector in a variety of developing countries.

The focus of the Business Cooperation sub-activity is fostering development linkages between the Canadian business community and its counterparts in developing countries. The Branch organizational structure consists of a Policy and Liaison Division, an Industrial Relations Division and the Industrial Cooperation Division.

This sub-activity has a large base of support from the Canadian business community and there is a substantial and growing demand for its services. This demand is being met by an increase of two person-years and $12.0 million in 1985/86.

B. International Initiatives

Objectives

- to support the activities of global and regional multilateral organizations in their programs and projects of development cooperation with the peoples and organizations of developing countries;
- to alleviate hunger and other hardships through the provision of humanitarian assistance; and
- to foster greater knowledge and understanding amongst Canadians of international cooperation and development.

Resource Summary

The International Initiatives Activity represents 29.3 % of the total budget of the IDA Program for 1985/86.

Description

The International Initiatives Activity comprises support in the form of funding, food transfers and policy input for the development efforts of international organizations, both governmental and private. It has five sub-activities:

International Financial Institutions: Through this sub-activity, the IDA Program supports four international development banks established by international agreement (support to the World Bank is provided through the Department of Finance). These four regional development banks, with headquarters in each of the geographic regions, are the Asian, African, Inter-American, and Caribbean Development Banks. The contributions of the Canadian and other government members enable them to mobilise private capital for development projects.

Multilateral Food Aid: This relates to Canadian food aid channeled through the World Food Program (WFP) of the United Nations Food and Agriculture Organization.

Multilateral Technical Cooperation: Under this sub-activity grants are provided to various United Nations agencies each with specific development mandates, such as the United Nations Development Program, UNICEF and the UN Fund for Population Activities. Support is also provided to such bodies as the Commonwealth Fund for Technical Cooperation, La Francophonie's Special Development Program, the International Fund for Agricultural Development, and a number of international agricultural research organizations.

International Humanitarian Assistance: Under this sub-activity Canada helps to alleviate human suffering resulting from droughts, refugee crises, and other disasters, through such organizations as the UN High Commissioner for Refugees and the Red Cross.

International Non-Governmental Organizations: This includes support for non-profit international organizations engaged in development work, such as the YM/YWCA.

The level of Canadian support for these multilateral institutions is decided after careful appraisal of the degree to which they are in accord with Canada's development priorities and other foreign policy goals. In general, these multilateral bodies are able to perform certain tasks which would be difficult to accomplish on a government-to-government basis. For example, the regional development banks mobilize particularly large sums of capital in order to carry out projects which might be too large for a single donor. In addition, international organizations such as the Red Cross are well-equipped to coordinate assistance from many donor countries and are widely respected for their competence and political neutrality.

Performance Information/Resource Justification

Under this activity in 1985/86, the IDA Program intends to undertake the following:

Development Programs and Projects of the Regional Development Banks: $135.6 million has been allocated to provide funding for the development programs and projects of the regional development banks.

On the basis of contributions of paid-in capital and government guarantees provided by Canada and other donor nations, the African, Asian, Inter-American and Caribbean Development Banks borrow on world capital markets and in turn make loans to developing countries for development projects, often on a very large scale. Most loans are at near-market rates of interest, but these rates are still much lower than most developing countries could obtain on their own and they have lengthy grace periods and longer pay-back periods. In addition, the banks also possess special facilities for lending to the poorest developing countries at virtually interest-free rates and concessional terms. More than 80 % of Canada's funding to the banks is reserved for these special facilities.

It should be noted that Canadian support for the World Bank and its fund for the poorest countries, the International Development Association, is included in the Estimates for the Department of Finance. CIDA, however, works closely with the Department of Finance in developing Canadian positions within the World Bank, and consults directly with the staff of the World Bank in establishing Canada's regional and country priorities.

The effectiveness of CIDA's support for the regional development banks can best be indicated by reference to several trends. The banks have in recent years been able to mobilize for development purposes as much as nine dollars of private capital for every dollar of paid-in capital supplied by the Canadian and other governments. Canada's contributions are thus subject to a substantial multiplier effect. Further, participation in these banks serves Canada's interests in that approximately two-thirds of each dollar disbursed by Canada was returned in the form of procurement of Canadian goods and services. Efforts are being made to increase these returns in the future.

Food Aid Assistance: $[illegible]6 million has been allocated to supply food assistance for millions of people, for distribution through multilateral food aid institutions.

As indicated above, Canada has committed itself to supplying 600,000 tonnes of cereals annually, about 40 % of which is distributed through multilateral organizations, primarily the the Word Food Program (WFP). WFP food is distributed either directly to especially vulnerable groups such as children and nursing mothers, or is channelled through its "food for work" program, which collaborates with developing country governments in providing employment for millions of people in rural works projects such as roads and irrigation canals, in return for payment in food.

Multilateral Technical Cooperation: $126.8 million has been allocated to support the development programs of United Nations agencies and other international organizations which are important in promoting international development.

The Multilateral Technical Cooperation sub-activity includes grants to the United Nations Development Program, UNICEF, and other U.N. agencies, as well as to other international development programs such as the Commonwealth Fund for Technical Cooperation and La Francophonie's Special Development Program. Many of these agencies concentrate their efforts in the field of technical assistance and training, while UNICEF is well-known for its educational, nutritional and health programs for children around the world. One of the other bodies supported is the Consultative Group on International Agricultural Research, which has funded extraordinarily successful agricultural research programs to develop high-yielding varieties of rice and wheat.

In determining appropriate levels of support for these bodies, CIDA undertakes regular assessments of their effectiveness in achieving developmentally sound results. In addition, Canada often plays a key role together with other donors in instituting changes within these organizations to improve their operational effectiveness.

International Humanitarian Assistance: International humanitarian assistance is provided through international institutions, non-governmental organizations and foreign governments in response to natural and man-made disasters, as well as for refugee programs. In addition, core funding is provided to international humanitarian organizations such as the United Nations High Commissioner for Refugees and the International Committee of the Red Cross. For example, in 1984/85 Canada responded to such situations as a drought in Africa (Ethiopia, Ouganda ...), floods and droughts in Colombia and Bangladesh, a typhoon in the Phillipines and a cyclone in Madagascar, and provided food and shelter for Afghan refugees in camps in Pakistan. To ensure the effectiveness of its international humanitarian assistance, the IDA Program also supports efforts to maintain and develop the capabilities for disaster preparedness of institutions involved in humanitarian assistance. $41.7 million has been allocated for response to disasters in 1985/86.

International Non-Governmental Organizations: $19.9 million in grants and contributions has been allocated to support the development work of a wide variety of international non-governmental organizations. Examples are the International Planned Parenthood Federation, the YM/YWCA and the Asian Institute for Rural Development. To determine levels of support, CIDA assesses the developmental effectiveness and organizational capabilities of these international groups.

International System of Burden-sharing: One of Canada's key international development objectives is to strengthen the principle of equitable sharing of the costs of support for the development programs of multilateral agencies, so that all wealthy countries will be encouraged to contribute in accordance with their economic strength. With this goal in view Canada continues to play a central role in various international negotiations, particularly with respect to the special funds of international development banks for the poorest countries, and is prepared to back up its negotiating position with substantial financial commitments, within the limits imposed by budgetary allocations. For example, in recent years Canada has played a leading role in the replenishing of the World Bank's concessional fund for the poorest countries, in international negotiations leading to the establishment of multi-year financing for the Commonwealth Fund for Technical Cooperation, and in strengthening the effectiveness of the United Nations Development Program.

Representation in Multilateral Development Institutions: It is important to ensure that Canada's positions and interests are taken into account in the operations of these institutions. Relevant Canadian interests include commercial goals, overall foreign policy priorities and the objective that there be a high level of Canadian representation at the senior staff levels of multilateral organizations. In the commercial sphere, participation in the activities of multilateral institutions renders Canada eligible for a wide variety of foreign contracts, often of very considerable scope. The means by which Canadian influence is exerted varies from institution to institution. In most cases, however, Canadian financial support is on a large enough scale to give Canada substantial influence on decision-making. For example, Canada is able to maintain a permanent seat on the Boards of

Directors of the Asia Development Bank, the African Development Bank, the African Development Fund, the Inter-American Development Bank, and the Caribbean Development Bank because of the importance of our participation. Similarly, Canada is an influential member of the governing bodies of the United Nations Development Program, UNICEF, the UN Fund for Population Activities, the Commonwealth Fund for Technical Cooperation and the International Fund for Agricultural Development.

C. Corporate Services

Objective

- to ensure that the Agency has the necessary support services to enable the efficient and effective achievement of the International Development Assistance Program objectives within the framework of federal government policies, procedures and controls.

Resource Summary

The Corporate Services Activity accounts for 2.0 % of the total budget of the IDA Program for 1985/86. Of this amount, 50.4 % is related to personnel salaries and benefits. The largest part of the balance relates to the professional and special services required to implement computerized information systems in CIDA.

Description

The Administration Activity includes the following CIDA services:

Agency Executive Services: the establishment of policy direction to CIDA as well as the overall coordination and administration of its operations to ensure consistent, timely and efficient implementation of the IDA Program.

Policy Formulation and Evaluation Services: the formulation of development policies and strategies in relation to the transfer of ODA to developing countries, the provision of continuing advice to ensure these policies are kept relevant to conditions affecting the implementation of the IDA Program, and the design and review of evaluation methods and practices to maximize its effectiveness.

Comptroller: the formulation, development and implementation of financial planning policies, processes and guidelines and the conduct of special studies on financial issues, the provision of financial management,

accounting and management systems expertise and services to line management, and ensuring that responsibilities for financial administration are discharged as specified by Parliament and the central agencies.

Public Affairs: the provision of information and educational material to the public about international development and the IDA Program. Public information explains to the public the nature and scope of Government involvement in international development issues. Development education activates a more informed awareness of development issues and problems among the Canadian people, encourages a greater public interest and involvement in international development and stimulates increased flows of development assistance from the private sector.

Personnel: the provision of personnel support services to line management and ensuring that responsibilities in relation to government-wide policies such as official languages and affirmative action are implemented.

Administration: the provision of logistic services and the purchase of material supply and equipment related to Agency requirements.

Performance Information/Resource Justification

The Corporate Services Activity includes two kinds of administrative functions. The first comprises administrative services related to the operation of CIDA as a whole, such as staffing, strategic planning, and office accommodation. The second includes those administrative services specifically related to individual programs and projects within the Country to Country Cooperation and International Initiatives Activities. These functions could be placed in the operational activities, but are centralized in the Corporate Services Activity for reasons of efficiency. Some examples of these services are the verification of project accounts, the processing of invoices for payment, financial advice in the planning and implementation of projects and liaison with certain international programs. This represents approximately 20 % of the Corporate Services Activity.

General Services	2	2	2	13,253-39,988	18,471
	1,161	1,157	1,085		

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

5. Cost Analysis

The total IDA Budgetary Program Costs, including $5,696,000 for services provided without charge by other departments, are shown below.

Figure 19: Total Budgetary Program Costs ($000)

	Estimates 1985/86	Other Costs	Total Costs	Total 1984/85
Country to Country Cooperation	968,666	-	968,666	900,892
International Initiatives	357,612	-	357,612	325,201
Corporate Services	35,522	5,696	41,218	43,283
	1,361,800	5,696	1,367,496	1,269,376

1985–86 Estimates

Part III

Expenditure Plan

503

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Radio-television and Telecommunications Commission

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected resources and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are Extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in the 1985-86 Estimates to spend $22,961,000 to carry out the mandate of the Canadian Radio-television and Telecommunications Commission. Expenditures for pensions and other employee benefits, estimated at $2,435,000 will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

In 1985-86 the Canadian Radio-television and Telecommunications Commission will:

- process approximately 4,000 broadcasting applications dealing with new licences, amendments to licences, licence renewals and applications to affect changes in ownership, assets or control or network applications, including applications on the renewal of most French TV stations, most FM stations, the CTV network and most english TV stations (see page 25);

- continue to oversee pay television service in Canada. This will involve the licencing of cable exhibitors and closely monitoring the progress of all pay television services to ensure that the Commission's objectives are met (see page 29);

- hold a public hearing to review the operation of specialty services to ensure that the new specialty services effectively contribute to realization of the objectives of the Broadcasting Act (see page 28);

- hold a hearing on non-programming cable services in order to do an assessment of the potential impact of the new non-programming services (see page 29);

- propose further changes to Cable Television Regulations in order to streamline the processing of applications involving increases in rates for cable companies with less than 3,000 subscribers. The Commission will also consider the possibility of further amending the cable television regulations to take into account recent broadcasting developments (see page 28);

- develop and implement a new approach to regulation in the telecommunications industry involving a broad rule-making approach to industry structure that recognizes the similarities to all federally regulated carriers of many of the issues affecting market entry and the behaviour of regulated companies in competitive markets (see page 35);

- conduct a number of issue proceedings on matters including structural separation (affiliated companies for the provision of competitive services) and a review of the federally regulated

carriers' General Regulations; and to continue work on previous proceedings relating to Interexchange Competition (long distance competition) and Phase III of the Costs Inquiry costing methodology for existing services) (see page 35); and

- hold major rate hearings for Bell and B.C. Tel (see page 35).

2. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Broadcasting	11,837	11,923	(86)	22
Telecommunications	3,451	3,441	10	31
Administration	10,108	10,156	(48)	36
	25,396	25,520	(124)	
Person-years	425	439	(14)	

*There has not been significant change from the 1984-85 Estimates.The 1984-85 Forecast is $25,000 less than the 1984-85 Estimates of $25,545,000 (Extracts from Part II of the Estimates, page 4).

Explanation of Change: The decrease of $124,000 or 0.5% in financial resources requested for 1985-86 is made up of the following major items:

	$ 000
• Salaries and wages rate increase	1,383
• Person-year reduction	(606)
• Operating cost reduction	(901)

B. Recent Performance

1. Highlights

Major changes to the Program's plans for 1984-85 are as follows.

Broadcasting

- Increased emphasis is being put on the financial viability of new services in order that new services can better deal with economic constraints in a competitive broadcasting environment.

- The Commission is undertaking a full review of the procedures of the CRTC with a view to eliminating superfluous regulation, procedures and paper work and to identify and eliminate the causes of "regulatory delay" in the processing of broadcasting applications.

- Renewed emphasis is being placed on public concerns. In terms of both the existing and the new broadcasting services, the CRTC is giving highest priority to evolving public needs, tastes, opinions and values.

- The CRTC is placing increased emphasis on the collective strategic planning of the broadcasting industry so that both the Commission and the broadcasting licensees can coordinate and plot specific strategies for the future.

Highlights of the Program's performance during 1983-84 are set out below.

Broadcasting

- Following extensive consultation with the broadcasting industry and the public, the Commission issued criteria for the recognition of Canadian programs, with guidelines for the treatment of joint ventures, series, production packages, sports productions, dubbing, station and network productions, music videos and dramatic programming.

- The Commission held a number of consultative meetings and exchanges with representatives from the broadcasting and recording industries to assist in its intent to streamline its FM radio regulations with the aim of providing greater flexibility for broadcasters, while still ensuring a varied and comprehensive FM service. The Commission announced a more simplified approach to FM radio in June 1984.

- The Canadian pay television industry has undergone a series of major changes necessitating certain restructuring actions to enable participants to better respond to the market place. The Commission has dealt with a number of areas of concern relating to pay television in 1983-84. They include: licensee restructuring, programming standards and practices, previews, network regulations and stereo audio.

- The Commission held a public hearing to consider applications to provide new Canadian specialty programming services to cable subscribers on a discretionary basis. In April 1984, two applicants were licensed to provide a music video service and an all-sports service.

- The CRTC published its policy and criteria for the tiering of pay television services. These guidelines outline the objectives and structure of tiering and address among other things the question of the carriage of Canadian and foreign signals and rate regulations.

- As part of its continuing effort to simplify and expedite the regulatory process the Commission proposed changes to streamline the rate regulation of certain cable systems.

- The Commission approved CANCOM's application to add the distribution of three commercial and one non-commercial U.S. networks to its package of Canadian services.

Telecommunications

- The Commission disposed of a general rate application from Bell Canada.

- The Commission directed its attention to several major telecommunications issue proceedings including Phase III of the Cost Inquiry, interexchange competition, enhanced services and a seminar on local service. Phase III hearings, which began in May 1982, addressed the issue of establishing appropriate costing methodologies to be used in the assessment of rates for existing services. Interexchange competition refers to the Commission's decisions permitting CNCP to interconnect with Bell Canada and B.C. Tel, in order to provide certain competitive interexchange voice and data services.

  (The term, enhanced services, is generally used in the context of telecommunications services where information storage or information processing services are added to basic telecommunications transmission services.)

- The Commission participated in a conference on local measured telephone service to discuss the technical, financial, economic, social and regulatory aspects of local measured telephone service.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Broadcasting	10,048	10,957	(909)
Telecommunications	2,749	3,353	(604)
Administration	10,780	10,310	470
	23,577	24,620	(1,043)
Person-Years	417	436	(19)

Explanation of Change: The difference of approximately $1,043,000 or 4.2% between actual expenditures and the Main Estimates results mainly from the following:

	$000
• a lapse of person-years and other related costs because of difficulty in recruiting qualified candidates for vacant positions	758
• resources rolled over for a study on Sex-Role Stereotyping in Broadcasting and Standards and Practices in Pay Television (The study was started in fiscal year 1984-85)	175
• Government-wide administrative restraint measures approved by Cabinet	110

C. Background

1. Introduction

By Act of Parliament on April 1, 1968, the Canadian Radio Television Commission was created to regulate broadcasting companies which constitute the Canadian broadcasting system. The Broadcasting Act refers to these entities as broadcasting transmitting undertakings (radio and television stations), broadcasting receiving undertakings (cable television systems) and networks. Broadcasting itself is defined to mean any radiocommunication in which the transmission is intended for direct reception by the general public.

Broadcasting jurisdiction is separate from that pertaining to private radiocommunication such as citizen band radios. The latter is licensed and regulated by the Minister of Communications under the Radio Act. No broadcasting licence may be issued by the CRTC until the Minister of Communications has certified that the applicant has satisfied the technical requirements of the Radio Act and regulations promulgated thereunder.

Under the Broadcasting Act, the CRTC is given full power to regulate and supervise the Canadian broadcasting system as well as power to issue, renew, amend, suspend and revoke licences. Figure 3 shows the process used by the Commission to issue new broadcasting licences.

Since April 1, 1976, with the coming into force of the Canadian Radio-television and Telecommunications Commission Act, the Commission has also exercised authority over the federally regulated telecommunications common carriers. This Act defines telecommunications as any transmission, emission or reception of signs, signals, writing, images or sounds or intelligence of any nature by wire, radio, visual or other electromagnetic system. The federally regulated carriers subject to CRTC jurisdiction are Bell Canada, British Columbia Telephone Company, CNCP Telecommunications, NorthwesTel Inc., Terra Nova Telecommunications Inc., and Telesat Canada. Whereas broadcasting regulation is principally concerned with licensing and programming, the regulation of telecommunications carrriers centres on ensuring that the rates or tolls charged to the public for various telecommunications services are just and reasonable and that the carriers do not engage in any unjust discrimination or afford any undue preference or advantage in the provision of telecommunmications services or facilities.

In certain respects, as set out in Section 19(7) of the Broadcasting Act and Section 45(3) of the National Transportation Act, the Commission has all the powers, rights and privileges as are vested in a superior court.

Figure 3: Process for Issuing New Broadcasting Licences

EITHER:
Several applications are received. All applicants are called in a public hearing where they must outline their applications before a quorum of Commissioners, make commitments about broadcasting plans and respond to questions from about the proposed operation of the stations or system. Intervenors amplify comments made in their written interventions and respond to questions from Commissioners and/or CRTC counsel. The applicants offer rebuttal comments to interventions.
OR:
Only one application is received. Because the application is for a new licence, it must nonetheless go to a public hearing. The applicant appears at a hearing before a quorum of Commissioners, makes commitments about broadcasting plans and responds to questions about the proposed operation of the station or system. Intervenors amplify comments made in their written interventions and respond to questions from Commissioners and/or CRTC counsel. The applicant returns to offer rebuttal of comments made by the intervenor(s).
The CRTC makes its decision on the basis of the written application.
APPROVED
The Full Commission meets and consults on the application(s) following the public hearing. The Executive Committee approves a particular application. It agrees to issue a licence for a specified period of time.
DENIED
The Full Commission meets and consults on the application(s) following the public hearing. The Executive Committee issues a denial of the application(s).
Notice of the decision is published by CRTC
Applicant(s) or intervenor(s) can appeal decision to the Governor-in-Council, the courts or both.
EITHER:
Appeal is successful: CRTC can be required to re-hear the application(s).
OR:
Appeal is unsuccessful: applicant may choose to resubmit an application for possible future consideration.

2. Legal Mandate

The legal mandate for broadcasting and telecommunications derives from various statutes including the Broadcasting Act and the Railway Act.

Broadcasting: Under Section 15 of the Broadcasting Act, the CRTC is given the responsibility to regulate and supervise all aspects of the Canadian broadcasting system with a view to implementing the broadcasting policy enunciated in Section 3 of the Act. Section 3 enunciates a number of major objectives relating to programming and other important aspects of the broadcasting system. With respect to programming, which is an important element of broadcasting policy, Section 3(d) states that:

> "The programming provided by the Canadian broadcasting system should be varied and comprehensive and should provide reasonable, balanced opportunity for the expression of differing views on matters of public concern, and the programming provided by each broadcaster should be of high standard, using predominantly Canadian creative and other resources".

The powers conferred on the Commission by Parliament include the authority to issue, renew, amend, suspend and revoke a broadcasting licence. They include the power to prescribe classes of broadcasting licences and to make regulations applicable to all persons holding broadcasting licences of one or more classes. They also include the power to impose conditions of licences.

The Commission may exempt persons carrying on broadcasting receiving undertakings of any class from the requirement that they hold broadcasting licences.

Every decision of the Commission is final and conclusive except that the issue, amendment or renewal by the Commission of any licence may be set aside, or may be referred back to the Commission for reconsideration and hearing by the Commission by order of the Governor in Council.

An appeal against a decision or order of the Commission may be made to the Federal Court of Appeal upon a question of law, or a question of jurisdiction.

Telecommunications: The CRTC's mandate for telecommunications derives from several statutes, including the Railway Act and certain provisions of the National Transportation Act which are made applicable to telecommunications, and the acts of incorporation of the federally-regulated carriers. Section 321 of the Railway Act provides that all rates shall be just and reasonable, and that a carrier shall not engage in any unjust discrimination or afford any undue preference or advantage in respect of its rates, services, or facilities.

Under Section 64 of the National Transportation Act, the Cabinet can vary or rescind, but not refer back, decisions made by the Commission relating to the federally-regulated telecommunications carriers.

3. Program Objective

The objective of the Canadian Radio-television and Telecommunications Commission is "to encourage the implementation of the national broadcasting policy through the regulation and supervision of the Canadian broadcasting system; and to regulate rates and other aspects of the services offered by telecommunications common carriers under federal jurisdiction."

This objective is further explained in several sub-objectives:

Broadcasting:

- to promote the development of a Canadian owned and controlled broadcasting system which will safeguard, enrich and strengthen the cultural, political, social and economic fabric of Canada;
- to promote provision by the Canadian broadcasting system of high standard, varied and comprehensive programming using predominantly Canadian creative and other resources and reasonable, balanced opportunity for the expression of differing views on matters of public concern;
- to ensure provision of broadcasting service in English and French to all Canadians, as public funds are available;
- to ensure that the national broadcasting service, through a corporation established by Parliament, is extended in both official languages to all parts of Canada, contributes to the development of national unity, and provides for a continuing expression of Canadian identity;
- to ensure provision of facilities within the Canadian broadcasting system for educational broadcasting; and
- to ensure that the regulation and supervision of the Canadian broadcasting system is responsive to scientific and technical advances.

Telecommunications:

- to ensure that the rates charged by federally regulated telecommunications carriers for the services they offer are just and reasonable;
- to ensure that carriers do not discriminate unjustly or accord undue preferences in respect of rates, or of any services or facilities they provide;
- to ensure that carrier activities related to their services and rates are reasonable; and

- to discharge other mandates conferred by the Railway Act, including approval of agreements between carriers and consideration of applications for interconnection of telecommunications systems.

4. Program Organization for Delivery

Activity Structure: The CRTC Program is comprised of three activities which contribute to the achievement of the program objective: Broadcasting, Telecommunications and Administration. The Broadcasting and Telecommunications Activities support the Commissioners by providing advice on policy development and by researching and evaluating all applications received by the Commission. The Administration Activity includes the Chairman's Office (the Chairman is the chief executive officer), the Executive (which is the decision-making authority of the CRTC), the Legal Directorate and the Corporate Management Directorate.

Figure 4: Activity Structure

Organization Structure: The Broadcasting Act which establishes the Commission as "a single independent public authority", requires the Commission to prepare a report to Parliament at the end of each fiscal year and states "the Minister (of Communications) shall cause the report to be laid before Parliament." The Broadcasting Act further states all annual expenditures of the CRTC" shall be paid out of money appropriated by Parliament therefor" and the Financial Administration Act and Schedules designate the Minister of Communications as the appropriate Minister for the process of approval of the annual financial estimates. The Commission itself is organized under four broad sectors: Executive, Operations, Legal Directorate and Corporate Management Directorate. The Executive sector includes the Chairman and members of the Commission. The Operations sector is responsible for research and advice on all broadcasting matters and similar functions relating to telecommunications. The Legal Directorate provides legal advice to the Chairman and Commissioners. The Corporate Management Directorate is responsible for the day to day administration of the Commission and for coordinating corporate and strategic planning.

The relationship between the CRTC organization and the previously described activity structure, together with a breakdown of 1985-86 resources, is shown in Figure 5.

Figure 5: 1985-86 Resources by Organization/Activity ($000)

					Activity Total
Broadcasting 214 P-Y		11,837			11,837
Telecommunications 63 P-Y		3,451			3,451
Administration 148 P-Y	2,472		1,027	6,609	10,108
Program	2,472	15,288	1,027	6,609	25,396

D. Planning Perspective

1. Environment

The Canadian Radio-television and Telecommunications Commission continues to face a period of environmental change of considerable significance. Several key factors which affect the Program are outlined below.

The Nature of a Regulatory Agency: As a regulatory agency created by statute, the Commission operates in a complex planning environment. On the one hand, it must adopt a long-term planning perspective to ensure that effective policies are implemented which take into account a rapidly changing environment. At the same time, the Commission must at all times maintain the capacity on a day-to-day basis to examine and rule on a wide variety of broadcast applications and to regulate the rate structures of telecommunications common carriers under Federal jurisdiction. The accomplishment of these tasks requires a long-term plan capable of accommodating a highly reactive mode of operation, as well as a flexible organization and a core of competent, diversified staff members capable of quick mobilization in the face of changing workload demands and new priorities.

These tasks also must be undertaken within a quasi-judicial framework which attaches great importance to public processes and public participation. As such, a vital part of the Commission's work involves the consideration of interventions from the Canadian public chiefly through the medium of public hearings. These hearings take place throughout the year in all parts of Canada and provide a forum at which members of the public can comment on applications or on matters relating to specific policy and regulatory issues.

Technological Change: The Canadian broadcasting system is facing an increasingly competitive environment. Revolutionary technological innovations are making it possible to bring a great variety of entertainment and information into the home. The rapid development of satellite technology, combined with the development and expansion of cable television systems, has dramatically increased the number of channels of television programming available to the viewer. In addition, regulated conventional and discretionary programming services will have to compete increasingly in the future for the viewer's attention with non-regulated domestic services such as videocassette recorders, micro-computers, home computers and video games, and additional foreign services such as direct-to-home satellite broadcasting.

Such rapid technological change requires that the Commission carefully review existing policies to ensure that the objectives of the Broadcasting Act are being met in the most effective manner in this new environment. In particular, rapid change and uncertainty make it even more important that the Commission eliminate unnecessary regulatory barriers to flexibility and innovation. This is being accomplished by placing greater emphasis on the supervisory, rather than the regulatory powers vested in the Commission by the Broadcasting Act.

The single most significant effect of new communications technology in telecommunications has been an increase in competition - both in terms of new players in the communications industries, and in terms of new products and services, many of which are unregulated but compete with traditionally regulated carriers. For example, the integration of microelectronic and digital technology into the telecommunications system has led to lower costs (and thus lower barriers to entry into monopoly markets) and a range of product and service substitutes to those offered by regulated carriers. Competition between regulated carriers and unregulated companies has occurred or will occur in established and emerging markets such as business equipment, cellular radio, electronic mail and a range of computer communications services. The development of integrated services and the potential for billions of dollars in revenues in the integrated information services industry has increased the demand for entry into the voice and data communications markets controlled by regulated carriers, as well a demand from carriers to enter new markets such as the computer communications field and electronic publishing fields. The Commission has moved from a primarily reactive mode in telecommunications into a planned program of broad rule making aimed at addressing the broad policy issues that have arisen as a result of technological change.

Economic Impact: During the term of this Expenditure Plan, the work of the Commission will continue to be affected by the government's guidelines on price increases, particularly in the area of cable television subscriber rates and in the rates and tariffs of telecommunications carriers. During the current year the Commission will be assessing the potential regulatory implications of important economic considerations such as the fluctuation in inflation and interest rates and, in the case of cable television rates, the financial implications of new cable television services authorized by the Commission. Careful consideration will be given to new policies designed to allow the communication industry to take advantage of the somewhat improved economic climate to strengthen its financial position and its contribution to communication policy objectives.

2. Initiatives

The work undertaken by the CRTC is governed by the fact that quasi-judicial bodies are both proactive and reactive and must be capable of adapting and adjusting as required. During 1985-86 the Commission intends to continue developing broadcasting and telecommunication regulatory policies in specific areas and to review previously established regulatory policies. The Commission will develop and implement a new approach to regulation in the telecommunications industry involving a broad rule-making approach to industry structure that recognizes the similarities to all federally regulated carriers of many of the issues affecting market entry and the behaviour of regulated companies in competitive markets. The impact on operational activities is described on pages 22 to 39.

3. Program Effectiveness

The overall effectiveness of the Program can be analyzed in terms of several sub-objectives (see page 15). Generally, these sub-objectives focus on addressing the performance of the Canadian broadcasting industries in terms of Canadian ownership and control, programming, accessibility to the national broadcasting system, responsiveness to technological change and the telecommunications industry in terms of its rates and tariffs and the provision of service in relation to a growing degree of competition and expansion of traditional markets.

Although the Program contributes to the achievement of these sub-objectives through the exercise of its regulatory mandate, several other factors exist which are influential. Thus the information which follows reflects the cumulative effect of decisions not only by the CRTC but also by such other influences as the broadcasting and telecommunications industries, their suppliers, their clients and various interest groups.

Canadian Ownership and Control: Since the creation of the Canadian Radio Television Commission in 1968, the regulatory influence of the Program has significantly reduced foreign ownership and control to the extent that there are no broadcasting or cable companies where foreign ownership exceeds the 20% level specified in a Cabinet Directive. As well, there are no longer any foreign directors involved in broadcasting undertakings.

Accessibility to the National Broadcasting System: Over the last several years there has been a significant expansion in the number of broadcast facilities and in the volume of business generated by them. Figure 6 illustrates the growth for AM/FM radio stations, television broadcasting facilities, cable television undertakings, Subscriber Television (STV) and Multi Transmitter Undertakings (MTU).

Figure 6: Growth of Broadcasting and Cable Television Undertakings (1978-1983)

	March 31, 1983		March 31, 1978	
	Number of licensed stations/systems	Revenues $ Millions	Number of Licensed stations/systems	Revenues $ Millions

1 Excludes CBC Radio
2 Includes CBC Television

In 1981, the CRTC licenced CANCOM to operate a multiple-channel television and radio broadcasting network via satellite to distribute a variety of Canadian television and radio signals to remote and underserved areas of Canada. In 1983, the Commission had approved CANCOM's application to amend its network licence by adding the distribution of signals in scrambled form of the three commercial and one non-commercial U.S. networks (the 3 + 1) signals to its package of Canadian services.

To date, the Commission has authorized more than 200 undertakings, reaching over 860 small communities in remote and underserved areas across Canada to distribute the CANCOM signals.

It is nearly universal that Canadians now have access to at least one Canadian radio and one Canadian television service. Over 90 percent of all Canadians can receive at least three Canadian television services. Over 70 percent of Canadians have access to three or more US broadcast services off air.

Another area in which major growth has occurred is cable transmission. Canada at present enjoys one of the highest levels of accessibility to cable television services. This level has risen from 75.7% in 1978 to 80% in 1983.

A related aspect of accessibility is the coverage of French language broadcasting. There are now French language radio stations in most major urban centres in Canada and in areas of significant francophone representation. This affords most Canadians the opportunity to receive broadcasts in the official language of their choice.

Canadian Content in Broadcasting: Section 3 of the Broadcasting Act requires that "the programming provided by each broadcaster should be of high standard, using predominantly Canadian creative and other resources."

The Commission has established definitions for Canadian programming for each broadcast medium and, by regulation and conditions of licence, it obliges licensees to ensure that prescribed amounts of Canadian content are broadcast. For example, in the case of television stations and networks, 60% of programs must meet the definition of Canadian content. Following a process of public consultation and further discussions with representatives of the broadcasting and production industries, the Commission put into effect the criteria for Canadian program recognition in April 1984. The Commission monitors television programming to verify that the Canadian content requirement is met. Effective October 1984 the assessment period for the computing of Canadian Content will be changed from an annual to a semi-annual basis. A related goal therefore is to ensure that Canadian programs are reasonably distributed throughout all time periods, regardless of time of day or year.

Responsiveness to Technological Change: The last decade has witnessed rapid advances in computer technology, satellite transmission/reception techniques and communications/broadcasting technologies. The future promises even greater rates of progress. While it is impractical to list all the Program's responses to this rapidly evolving area, one example of CRTC efforts is the decision to permit greater competition in the terminal equipment market which has resulted in favourable prices for customers purchasing telephones and other business terminal or interconnecting devices.

Section II
Analysis by Activity

A. Broadcasting

Objective

To support the Commission's decisions and policies in ensuring that the Canadian broadcasting system is effectively owned and controlled by Canadians and makes available high standard, varied and comprehensive programming that provides reasonable, balanced opportunity for the expression of differing views on matters of public concern; that broadcasting service in English and French is extended as public funds become available; that facilities are provided for educational broadcasting; and that the regulation and supervision of the Canadian broadcasting system is flexible and readily adaptable to scientific and technical advances.

Resource Summary

The Broadcasting Activity accounts for approximately 47% of the total 1985-86 CRTC expenditures and 50% of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Secretariat	3,296	48	3,387	51	2,526	48
Broadcasting Directorate	7,628	154	7,768	158	6,924	149
Research	913	12	768	13	598	11
	11,837	214	11,923	222	10,048	208

Approximately 81% of the total activity expenditures are for personnel costs. This rises if fees and payments for external contract assistance are included.

Broadcasting licence fee revenues for 1985-86 are estimated at $30.0 million (see page 44) and are credited to the Consolidated Revenue Fund.

Past Financial Performance:

Figure 8 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 8: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Secretariat	2,526	48	2,926	40	(400)	8
Broadcasting Directorate	6,924	149	7,290	154	(366)	(5)
Research	598	11	741	13	(143)	(2)
	10,048	208	10,957	207	(909)	1

Explanation of Change: The decrease in actual expenditures from 1983-84 Main Estimates of $909,000 or 8% results from conducting fewer public hearings than originally anticipated; from postponing the studies on Standards and Practices in Pay Television; and from administrative restraint measures.

Description

The Broadcasting Activity:

- advises and provides recommendations to the Commission on the development of policy, regulations and on operational matters;
- analyses and evaluates proposals and applications submitted to the Commission in the context of the objectives of the broadcasting policy for Canada and the Commission's policies and regulations; and
- monitors the Canadian broadcasting system to determine the adequacy of present services, future requirements, and to ensure compliance to conditions of licence and regulations.

The Activity consists of three major areas: Secretariat, Broadcasting Directorate and Research.

Secretariat: The Secretariat is the official point of contact between the Commission and the public. It formally acknowledges submissions; plans and schedules public hearings and meetings of the Commission; and coordinates the drafting of decisions and policy statements which are issued over the signature of the Secretary General of the Commission.

Broadcasting Directorate: Broadcasting Directorate operations include the evaluation and analysis of applications for new licences and the renewal and/or amendment of existing licences in preparation for public hearings. The analysis of applications is extensive and may encompass programming, technical, financial, economic, marketing and/or ownership matters. This is the regulation function. Broadcasting analysis includes the exploration of issues raised by programming, the monitoring of correspondence and licensees' logs, visits to broadcasting and cable services, and policy evaluation to adapt the system to new technology. This is the supervision function.

Research: Section 18(1) of the Broadcasting Act states: "The Executive Committee may undertake, sponsor, promote or assist in research relating to any aspect of broadcasting and in so doing it shall, wherever appropriate, utilize technical, economic and statistical information and advice from the Corporation or departments or agencies of the Government of Canada".

Performance Information/Resource Justification

The workload of the Broadcasting Activity falls within three areas: broadcasting licensing, monitoring the broadcasting system, and developing broadcasting policies. All three areas, which are largely reactive in nature, must respond to external demands and considerations such as licensing applications received from the broadcasting industry, technological advances, Cabinet directives and the size of the broadcasting industry.

Broadcast Licensing: Over the past seven years the Commission's authorized person-years have declined from 492 to 440 while its broadcasting workload has increased by over 50% (see Figure 9). This has led to administrative reforms including a matrix or project mode of organizational structure for each public hearing. The CRTC has been reducing significant licencing backlog through administrative reform procedures. The Chairman is strongly committed to eliminating superfluous regulation and paper burden. The matrix structure complicates workload measurement and resource justification.

Figure 9 shows the number of broadcasting applications received, processed, and on hand, from 1978-79 to 1983-84 as of March 31 of each year.

Figure 9: Applications Received, Processed and On Hand

In the area of broadcast licensing, four types of applications are received for consideration by the Commission; 1) applications for new broadcast transmitting or receiving undertaking; 2) applications to amend any provision of an existing licence and requests for approval of changes to certain aspects of operations of a licence; 3) renewals; and 4) applications to effect changes in ownership, assets or control or network applications. Figure 10 shows the broadcasting licensing application workload for a three-year period.

Figure 10: Broadcasting Licensing Application Workload

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
New licences	229	232	404
Amendments to licences	2,734	1,927	1,915
Licence renewals	383	893	423
Ownership and Networks	658	610	574
Total applications received	4,004	3,662	3,316

The 1985-86 workload includes the renewal of both French and English language TV licences, most FM stations and the CTV network.

The Production Statement (Broadcasting), Figure 11, shows that the number of applications processed was 21% higher in 1983/84 compared to the year before. The number of application on hand at the end of 1983/84 was lower by 18% from the year before.

Figure 11: Production Statement (Broadcasting) for the fiscal years 1980-81, 1981-82, 1982-83 and 1983-84

	Actual 1983-84	Actual 1982-83	Actual 1981-82	Actual 1980-81
Application on hand at the beginning of the year	2,238	1,891	2,350	1,721
Applications received	3,316	3,427	3,239	2,801
Total to be processed	5,514	5,318	5,589	4,522
Applications processed	3,729	3,080	3,698	2,172
Applications on hand at the end of the year	1,825	2,238	1,891	2,350

A significant change in the Commission's processing procedures in relation to the selection of processing routes being utilized has greatly contributed to the overall decrease in processing time. The volume of broadcasting applications processed without a public hearing or public notice increased to 25% of all applications processed in 1983-84 compared to 10% in 1981-82. Figure 12, the Comparison of Average Processing Time shows that the average time taken to process applications has decreased constantly since 1980-81.

Figure 12: Comparison of Average Processing Time (in calendar days)

	Actual 1983-84	Actual 1982-83	Actual 1981-82	Actual 1980-81
Broadcasting applications processed by:				
Public Hearing	262	299	280	338
Public Notice	188	191	303	253
With Hearing/ Notice	109	80	109	140
Average of the three processes	197	237	266	289

Developing broadcasting policies: In carrying out its responsiblities for broadcasting policy development, the CRTC is focussing its current efforts on the following areas of concern:

- Canadian content;
- FM and AM regulations;
- Cable television;
- Specialty programming;
- Pay-television;
- Non-programming
- Sex-role stereotyping in broadcasting; and
- CANCOM

Canadian content: Following a process of public consultation and further discussion with representatives of the broadcasting and production industries the Commission issued revised criteria for the "Recognition for Canadian Programs" effective April 1984. In order to ensure the maximum possible degree of uniformity among the government agencies concerned, the Commission based its criteria of what constitutes a "Canadian program" on the Capital Cost Allowance point system and criteria applied by the Canadian Film and Videotape Certification Office of the Department of Communications. Further meetings were held during 1984 with most major english language licensees. Potential hearings if required are scheduled for the early part of 1985 on Canadian content related issues.

FM and AM regulations: In June 1984 the Commission published the proposed amendments to its FM and AM regulations, involving changes in definition of popular music, station format and foreground programs and announced that it would consult with French-language broadcasters to set up a working group to review their special circumstances with regard to the production foreground programs. These proposed amendments including a more simplified FM promise of performance will be taken into account by licensees in their licence renewal applications which are scheduled to be heard during winter and spring of 1985.

Cable television: The Commission is currently reviewings its policy on the distribution of audio services on the cable audio service, including Canadian AM radio signals, U.S. FM signals, the audio portion of over-the-air television and pay television signals, closed-circuit audio services, control signals and other similar uses of the cable audio service. In May of 1984, the Commission has released a draft of the proposed cable television regulation which essentially sets out the conditions pertaining to the carriage of audio services and the criteria for the mandatory priority and optional carriage of these services, and introduces new definitions for a "local AM station" and a "local FM station". The Commission intends to hold a series of consultative meetings regarding the various aspects of community radio. These consultations will be followed by a public hearing in 1985.

In 1983, the Commission approved an amendment to the Cable Television Regulations which would increase the number of closed captioned programs available to the hearing impaired. In 1984, it also proposed steps to make cable television regulations more flexible, one of which gives local Canadian AM and FM signals, broadcast in stereo, priority carriage on cable, and another which would ensure the carriage of the stereo audio feed of television services. A further proposed change would streamline the processing of applications involving increases in monthly rates for cable companies with less than 3,000 subscribers and in installation fees for all cable systems. As well other classes of licencees would be allowed to change their installation fees without CRTC approval. The Commission is considering the possibility of amending further the Cable Television Regulations to take into account recent broadcasting developments, such as the licensing of satellite-delivered programming services, the CRTC decision on tiering of discretionary services and its new policy on the carriage of audio signals by cable. The Commission is also considering the need for licensees to share the community channel with other compatible programming of a non-commercial nature.

The Commission's present policy on the cable carriage of distant Canadian signals does not permit unrestricted access by cable television systems. The Commission has followed a procedure of selective authorization for particular signals on particular cable systems. With the advent of an increasing number of satellite delivered signals, the Commission has decided to conduct a review of this policy and has received public comments on the issues associated with increasing the distribution of distant Canadian television services on cable systems. The Commission will study these before deciding whether or not to hold a public hearing.

Specialty programming: In 1983 the Commission issued a call for applications for a national satellite-to-cable interfaith religious programming service. As a guide for prospective applicants, the Commission established criteria covering various matters, including ownership, management, Canadian content and funding for such a religious programming service. In 1984 the Commission established a regulatory framework governing the introduction of speciality services in Canada and licenced two applicants, CHUM Limited, to provide a music video service and The Sports Network to provide an all-sports service. Because of the absence of any French language specialty service, the Commission urged cable licensees serving predominantly francophone communities to consult the Canadian specialty licensees with a view to providing

French-language services in their markets. It also decided to permit cable carriage of certain non-competitive foreign specialty services subject to specific linkage requirements and stated that cable licensees would be permitted to carry these non-Canadian services, as soon as they signed affiliation agreements with the new Canadian specialty licensees. As well, the CRTC issued in June 1984 a call for applications for the establishment of a Canadian programming service directed at Canadian youth. A public hearing was held in the fall of 1984 to cover the topics of Youth, Religious and other specialty programming. The Commission intends to hold a public hearing in 1986 after the specialty services have been in operation for two years, to review with all parties involved, the measures taken to ensure that the new specialty services effectively contribute to the realization of the objectives of the Broadcasting Act.

Pay-television: Pay television is characterized by risk and uncertainty and the need to be responsive and adaptable to a very dynamic environment. The Commission has stated its intention to maintain a sensitive and flexible approach with minimal regulatory constraints. It continues to believe that a flexible regulatory approach will maximize opportunities for the funding of Canadian programs and foster vigorous new proposals in this domain. The CRTC will, therefore, continue to be responsive to new proposals in this domain, provided they are consistent with its objectives for a distinctive Canadian pay television service. The Commission has approved the "merging" of First Choice and Super Channel.

With respect to the pricing of pay television services, the Commission is concerned by the relatively high subscriber fees and is encouraging both distributors and exhibitors to find ways to reduce the level of fees. The CRTC will also continue to place great importance on the financial integrity of applicants and viability of proposed services.

Non-programming services: In 1983, the Commission announced that, in response to information from cable industry representatives that their non-programming experiments had not advanced significantly, and that there was not sufficient data available to allow any adequate assessment of the potential impact of the new services, it would not be appropriate to have a hearing on non-programming cable services before 1985. Licensees wishing to continue their experiments, or to introduce new non-programming services, are permitted to do so until December 31, 1985, at which time the Commission proposes to schedule a hearing on the matter.

Sex-role stereotyping in broadcasting: The CRTC established a Task Force on Sex-Role Stereotyping to develop recommendations for a more realistic and positive portrayal of women in radio and television. The Commission accepted the recommendation of the Task Force requiring broadcasters to submit reports by 1 September 1984, on the initiatives taken to deal with the problem of sex-role stereotyping. The Commission intends to place these reports on the public file and to assess the success of the self-regulatory programs over a two-year period. The Commission's final report, which will be submitted for public comment, will be released by the spring of 1985.

CANCOM: In July 1983, the Commission had approved CANCOM's application to amend its network licence by adding the distribution of signals in scrambled form of the three commercial and one non-commercial U.S. networks (the 3 + 1 signals), to the package of Canadian services which it was licenced to deliver by satellite. In February 1984, the Commission issued a notice for the purposes of clarifying its guidelines with respect to the carriage of the 3 + 1 signals and of ensuring that a balance be maintained between Canadian and U.S. services.

To date, the Commission has authorized over 200 undertakings, totalling approximately 850,000 channel subscribers, to distribute the 3 + 1 CANCOM U.S. network signals. The majority of these undertakings are also authorized to carry the basic CANCOM Canadian package.

Monitoring the broadcasting system: Workload in monitoring the broadcasting industry is directly related to the number of licensed undertakings in operation during the year. Figure 11 shows the number of licensed undertakings.

Figure 13: Licensed Undertakings

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Number of licensed undertakings	4,766	4,535	4,119

Figure 14 sets out the number of public hearings which relate to broadcasting expected to be held between 1983-84 and 1985-86.

B. Telecommunications

Objective

To support the Commission's decisions and policies in ensuring that the rates charged by federally-regulated telecommunications carriers are just and reasonable and that carriers do not make any unjust discrimination or give any undue preference in the provision of their services and facilities.

Resource Summary

The Telecommunications Activity accounts for approximately 14% of the total 1985-86 CRTC expenditures and 15% of the total person-years.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Telecommunications	3,451	63	3,441	64	2,749	55

Past Financial Performance

Figure 16 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 16: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Telecommunications	2,749	55	3,353	60	(604)	(5)

Explanation of Change: The decrease in actual expenditures of $604,000 or 18% from 1983-84 Main Estimates results mainly from difficulties in recruiting qualified candidates to fill vacant positions and conducting fewer public hearings than originally anticipated.

Description

Telecommunications staff perform financial, economic and technical analysis in support of major rate applications, issue proceedings and tariff filings; ensure that the accounting methods and costing procedures employed by federally-regulated carriers are consistent with the requirements of the Commission; review the capital construction programs and quality of service of the federally-regulated carriers; investigate complaints or inquiries from users of telecommunications services and monitor developments in regulatory jurisdictions, in the courts and in legislation throughout Canada and the United States.

Performance Information/Resource Justification

The major workloads of the Telecommunications Activity involve processing of applications, handling of complaints and carrying out issue proceedings. As with the Broadcasting Activity, workload is largely dependent on external demands.

Most applications are concerned with specific carrier tariffs and deal with changes to the rates, terms or conditions for the provision of telecommunications services. Other application categories include applications for general rate increases which affect a majority of services offered by the carrier, share issue applications, agreement applications between telecommunication carriers including agreements between federally- and provincially-regulated carriers. Major regulatory policy proceedings have become the major focus of the telecommunications agenda. Figure 17 sets out the applications workload for a three-year period.

Figure 17: Major Activity Workload

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Tariff filings	810	805	750
General rate increases	4	3	4
Share issues	1	1	3
Agreements	50	50	50
Issue or policy proceedings	8	8	4
Total applications	873	867	811

The handling of complaints involves those of residential and business subscribers. Figure 18 shows the workload for the three-year period.

Figure 18: Telecommunications Complaints Workload

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Complaints	4,300	4,000	3,231

Figure 19 shows the Telecommunications regulatory activity over the past seven years in four major areas.

Figure 19: Telecommunications Regulatory Activity

Public Hearings: In Telecommunications it would be misleading to suggest that the number of public hearings or public hearing days provides an accurate reflection of the amount of staff time involved in a proceeding. For example, in the case of general rate increase proceedings the time from application to release of decision is set at 180 days. Included in work associated with these applications is analysis of evidence, preparation of interrogatories and analysis of interrogatory responses, hearing time and the preparation of lengthy and complex decisions. In addition the Commission has adopted a paper hearing approach to some proceedings such as for the problem of Radio Common Carrier/Cellular Radio Interconnection and Enhanced Services that removes the requirement for oral hearings but requires the same extensive analysis of rounds of submissions, preparation of internal briefings and preparation of decisions. Although these proceedings usually involve months of staff work they do not appear under time spent in the hearing process.

The major new issues confronting the Commission in telecommunications involve: the degree of competition, if any, that should be permitted in traditional monopoly markets; the entry of regulated carriers into emerging markets (computer communications, electronic publishing); and the rules governing the behavior of regulated carriers in competitive markets. Among the problems confronting the Commission in this technologically dynamic environment are:

- determining in which areas the public interest is best served by competitive market forces rather than regulatory monopoly;
- determining the appropriate allocation of costs for carriers that participate in both monopoly and competitive markets and further determining whether it would be appropriate to require structural separation in the provision of some competitive services;
- determining appropriate rules governing the entry and behavior of regulated carriers into emerging (e.g. computer communications) competitive markets;
- determining the objectives and requirements, if any, for regulation of essentially monopolistic firms operating in competitive markets (terminal equipment) or in markets in transition from monopoly to competition; and
- determining the impact of competition on inter-service subsidies which support affordable residential service, on the cost of doing business, on innovation on user choice and on the development and maintenance of an accessible public network for the efficient movement of information (voice, data, video), goods and services.

The Commission has commenced a number of proceedings that will address the status of competition in the telecommunications industry. The emergence of the telecommunications industry as a key component of economic growth and a major cost of doing business has increased pressure for more competition and lower prices in a number of products and services. Emphasis on less regulation and increased competition has become a major aim of government policy in many regulated industries. The major issue proceedings which the Commission will address in 1985-86 are:

- interexchange competition which deals with long distance competition;
- Cost Inquiry - Phase III which concerns costing methodology for existing services; and
- structural separation which deals with the provision of certain competitive services by affiliated companies.

The increased pressure on the Commission from technological change, increased competition and expanding or evolving markets has led the Commission to adopt a new approach to regulation. The traditional approach to regulation has been reactive; that is, the treatment of specific applications pertaining to market entry or the behavior of regulated companies in particular markets on a case by case basis. The Commission has adopted a broad rule-making approach to industry structure that recognizes the similarities to all federally regulated carriers of many of the issues affecting market entry and the behavior of regulated companies in competitive markets. By setting its priorities in favour of the fundamental structural issues of industry wide significance, the Commission considers that it will be able to reduce uncertainty as to the direction of regulation and competition and reduce the costs associated with case by case regulation in terms of the resources of the Commission and participants in the regulatory process. Although issue hearings on industry structure could signficantly increase its workload in the medium term, solutions to structural problems could ultimately contribute to less regulation in the long term.

While the traditional approach to rates and service costing continues, precedence is being given to the structural proceedings. This has involved delaying major rate hearings for Bell and B.C. Tel into 1985 and expanding CNCP's application to compete in the provision of long distance service to a general proceeding on long distance competition.

C. Administration

Objective

To make decisions pertaining to applications within the framework of the objectives outlined in the Broadcasting Act, the Canadian Radio-television and Telecommunications Commission Act, the Railway Act, and other related legislation.

Resource Summary

The Administration Activity, as defined by the CRTC, is a broad term which in the Commission's case incorporates all costs and person-years other than those assigned to the Broadcasting and Telecommunications activities. It therefore includes the Executive (the Chairman, two Vice-Chairmen and Commissioners), the Legal Directorate and the Corporate Management Directorate.

The Administration Activity represents 39% of the total 1985-86 CRTC program expenditures and 35% of the total person-years.

It should be noted that whereas Corporate Management utilizes 106 person-years, 76 of these are operational or operational support.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive Management	2,472	26	1,922	26	1,814	24
Legal Directorate	1,027	16	985	17	946	17
Corporate Management Directorate	6,609	106	7,249	110	8,020	113
	10,108	148	10,156	153	10,780	154

Of the total Activity expenditures, 74% are for personnel costs. This figure rises if the cost of contracted assistance is included.

Past Financial Performance

Figure 21 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 21: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Executive	1,814	24	2,046	25	(232)	(1)
Legal Directorate	946	17	946	16	-	1
Corporate Management Directorate	8,020	113	7,318	128	702	(15)
	10,780	154	10,310	169	470	(15)

Explanation of Change: The increase in actual expenditures over 1983-84 Main Estimates of approximately $470,000 or 4.6% results mainly from capital expenditures to replace obsolete furniture, to acquire equipment previously leased and for word processing equipment.

Description

The Administrative Activity is comprised of three major areas: Executive, Legal Directorate and Corporate Management Directorate.

Executive: is comprised of the Chairman, two Vice-Chairmen and six Commissioners who form the Executive Committee, and ten part-time members. The Executive Committee makes decisions with respect to all telecommunications matters and all broadcast licensing matters except revocations. The full Commission, including both full and part-time members, makes decisions involving the revocation of broadasting licences and also determines general broadcasting regulations and rules of procedures. Part-time members do not participate in deliberations on telecommunications matters.

Legal Directorate: The CRTC's General Counsel and his staff provide legal services to the Commission on all matters relating to the interpretation and implementation of the CRTC Act, the Broadcasting Act, the Railway Act, the National Transportation Act, and related federal and provincial legislation. Counsel advise the Commission with regard to the legal implications of all

proposals; conduct questioning and advise on procedural matters at public hearings; recommend and carry out legal proceedings instituted by or against the Commission; and draft regulations and amendments thereto.

Corporate Management Directorate: is responsible for the management of the Commission. Within it are located such central services as personnel, administrative services, finance, audit and evaluation, information management, corporate and strategic planning, computer services and statistical information.

Performance Information/Resource Justification

The major workloads of the Executive and Legal Directorate areas are displayed. in Figure 22.

Figure 22: Major Workloads of the Executive Management and Legal Directorate

Administrative Support					
Data Processing	2	2	3	13,352 - 37,130	28,243
Clerical and Regulatory	81	84	91	12,932 - 31,743	22,365
Secretarial, Stenographic and Typing	39	40	42	12,636 - 31,946	22,979

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 26: Details of Transfer Payments

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Grants towards research under Section 18 of the Broadcasting Act	75,000	75,000	10,500
Contributions			
Summer Canada-Student Employment Program	-	-	10,651
New Employment Expansion and Development (NEED) Program	-	-	48,442
	75,000	75,000	69,593

B. Cost Analysis

Net Program Cost

The CRTC's 1985-86 Estimates include authorities to be voted and statutory authorities. Also to be taken into consideration are services provided without charge by other departments which include $2,139,000 for accommodation by Public Works, $42,000 for services provided by Supply and Services, $286,000 for employee insurance premium and costs provided by Treasury Board.

Figure 27: Net Cost of Program for the Year 1985-86 ($000)

	1985-86				
	Expenditures	Add Other Costs	Less Receipts Credited to Consolidated Revenue Fund	**Total Net Cost**	1984-85 Total Net Cost
Canadian Radio-television and Telecommunications Commission Program	25,396	2,467	30,000	**(2,137)**	2,565

C. Revenue Analysis

Licence fees are payable annually by all broadcasting undertakings in accordance with the Commission's Broadcasting Licence Fee Regulations except for those specifically exempted by the Regulations. These exemptions are:

- rebroadcasting transmitting stations;
- student carrier current broadcasting undertakings; and
- broadcasting undertakings carried on by the Canadian Broadcasting Corporation.

The annual fees are calculated as follows:

- for radio broadcasting undertakings, $25 plus 1 1/2% of annual fee revenue exceeding $300,000;
- for television broadcasting undertakings, $25 plus 1 1/2% of annual fee revenue exceeding $1,000,000; and
- for broadcasting receiving undertakings (cable television) $25 plus 1 1/2% of annual fee revenue exceeding $75,000.

Receipts are credited to the Consolidated Revenue Fund and estimated licence fee revenues for 1985-86 and 1984-85 and actual revenues for 1983-84 are shown in Figure 28.

Figure 28: Revenues Received ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84

1985–86 Estimates

Part III

Expenditure Plan

551

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Canadian Transport
Commission

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $64,719,000 in 1985-86 for the Canadian Transport Commission. The remaining expenditures, estimated at $774,819,000 for certain payments to railway and transportation companies and contributions to employee benefit plans will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

The highlights for the Canadian Transport Commission (CTC) in 1985-86 will be the following:

- the Commission will sustain a continuous review of the Air Carrier Regulations, in light of prevailing conditions, to define and implement desirable reductions in the economic regulation of scheduled and chartered domestic air services (see page 25);

- the Commission will continue to relax control of air transport tariffs and services so as to provide more downward pricing flexibility in domestic tariffs (see page 24);

- new responsibilities for the transportation of dangerous goods by rail will be assumed under the Transportation of Dangerous Goods Act (see page 30);

- the first quadrennial costing review under the Western Grain Transportation Act will be undertaken (see page 34);

- the Commission will continue to address the effects of tariff regulation on the competitiveness of Canadian railways as a result of additional rate freedom now available to United States carriers under the Staggers Rail Act (see page 33);

- the Commission will complete an inquiry into possible alternative uses for railway branchlines threatened with abandonment (see page 32).

B. Financial Summary by Activity

Figure 1: Financial Requirements By Activity ($000)

	Estimates 1985-86	Forecast* Expenditures 1984-85	Change	For details see page
Air Transport	7,606	8,941	(1,335)	21
Railway Transport	768,722	729,390	39,332	27
Water Transport	2,185	2,137	48	35
Motor Vehicle	44,922	43,086	1,836	39
Research	4,183	4,071	112	42
Management and Administration	11,920	11,330	590	45
	839,538	798,955	40,583	
Authorized person-years	839	846	(7)	

* The 1984-85 forecast is $243.6 million or 43.9% higher than the 1984-85 Main Estimates of $555.4 million (Extracts from Part II of the Estimates, Page 4). The difference is due primarily to the enactment of new legislation in the form of the Western Grain Transportation Act with first year subsidy payments of $578.2 million, partially offset by related reductions of $346.6 million in payments under the Railway Act relating to uneconomic branch line services; increases in subsidy payments under the Atlantic Region Freight Assistance Act and the Maritime Freight Rates Act of $8.8 million and $1.7 million respectively; and additional operating costs of $1.5 million.

Explanation of Change: The financial requirements for 1985-86 are 5.1% or $40.6 million higher than the 1984-85 forecast expenditures. The increase is due primarily to:

- additional payments under the Western Grain Transportation Act — $76.2 million
- decrease in payments under the Railway Act — (38.6 million)
- additional payments under the Atlantic Region Freight Assistance Act — 2.2 million

- additional payments under the Maritime Freight Rates Act — 0.5 million
- discontinuance of operating subsidies to regional air carriers — (1.5 million)
- net increase in operating expenditures including salary revisions — 1.8 million

Figure 2: Gross Expenditures By Expense Category (millions of dollars)

C. Background

1. Introduction

The Canadian Transport Commission is a regulatory agency established by Parliament in 1967, pursuant to the National Transportation Act (NTA). It replaced the agencies that had regulated air, rail and maritime transport before that date. CTC also regulates interprovincial commodity pipelines and has some limited powers with respect to interprovincial motor vehicle transport.

The Commission's operations can be classified into four broad categories:

Economic Regulation: The Commission develops and enforces a framework of economic regulations covering transportation in Canada. This framework extends to all "modes" or types of transportation. For air transport, the CTC regulates fares and issues licences for domestic and international air service. For railway transport, regulations cover the filing of tariffs, the classification of accounts for financial and operating data, and methods of setting certain railway rates. The CTC also has various responsibilities for licensing marine transport operations in designated areas, licensing the construction and operation of inter-provincial commodity pipelines, regulating the filing of tariffs with respect to marine transport and commodity pipeline operations, and regulating the transport of goods by motor vehicle on Sundays.

Railway Safety Regulation: The CTC is responsible for setting and reviewing railway safety standards and procedures. It also inspects railway equipment and facilities and investigates accidents. Finally, the Commission is responsible for approving all proposed railroad crossing construction projects and, in some cases, contributes to their financing.

Analysis and Advice: The Commission's responsibilities include carrying out research into the economic and social aspects of transportation and advising the Minister in these areas.

Subsidy Administration: The CTC administers a number of subsidy programs. Certain of these programs subsidize the operation of uneconomic railway branch lines and passenger services. Other programs subsidize the transportation of grain in western Canada and other commodities in eastern Canada.

Intragovernmental Relationships: The Canadian Transport Commission works closely with the Department of Transport on matters such as transport subsidy policy, the movement of dangerous goods by rail, transportation of the handicapped, and the development of uniform motor carrier regulations (the latter in concert with provincial

governments as well). As noted above, the CTC has responsibility for economic regulation of air, rail and marine transport, as well as rail safety and technical regulation. However, Transport Canada is responsible for safety and technical regulations in the air and marine modes. Therefore, the two organizations maintain liaison to ensure proper coordination. The Commission also works with other government departments (notably External Affairs and Customs and Excise), both in negotiating international air agreements with foreign governments, and in representing Canadian interests within international organizations concerned with the regulation of ocean shipping. Liaison is maintained with the National Energy Board in regard to the development of commodity and combined pipelines and the regulatory guidelines associated with them.

2. Legal Mandate

The Commission's roles are set out in several Acts. The principal ones are as follows:

- the National Transportation Act requires the Commission to regulate transportation, to investigate acquisitions of commercial interests in the transportation area when objections are raised, and to conduct research into the socio-economic aspects of transportation;

- the Aeronautics Act specifies that the Commission must license commercial air services, examine and file tariffs, develop Air Carrier Regulations, ensure that operators comply with regulations, carry out investigations and surveys, and advise the Minister of Transport on air transportation matters;

- the Railway Act requires the Commission to monitor railway equipment, operations and services, to promote safety, to examine the discontinuance or subsidization of uneconomic operations or services, to prescribe a uniform "classification of accounts", and to verify certain railway costs and prescribe certain rail rates;

- the Transport Act gives the Commission responsibility for licensing water carriers in designated areas and for examining and filing tariffs between rail or water carriers or shippers; and

- The Western Grain Transportation Act gives the CTC responsibility for designating grain dependent lines, setting annual rate scales, making payments to railways for the movement of western grain and monitoring investment and maintenance plans for grain dependent lines.

A complete list of statutes administered by the Commission may be found in Section III (see page 55).

3. Program Objectives

The objectives of the Commission are:

- With due regard to national policy aimed at achieving an economic, efficient and adequate transportation system, to regulate the development and operation of those elements of the transportation sector that come under federal jurisdiction in order to protect the interests of the users of transportation, to maintain the economic well-being and growth of Canada, and to coordinate and harmonize the operations of transport carriers.

- To regulate the safety of railway transport services in Canada, so that they are operated in a manner that minimizes the risk of personal injury to employees and the public as well as damage to property.

- To develop and provide information and advice to the federal government on the economic and social aspects of all modes of transport within, into or from Canada.

- To administer, in an economical and efficient manner, certain federal government programs for the subsidization of transport services.

4. Program Organization for Delivery

Activity Structure and Organization: The CTC program is divided into six activities. Four activities relate to the major transport modes (i.e., rail, air, water, and motor vehicle transportation). Two others -- the Research activity and the Management and Administration activity support the program.

The Commission's organization is structured according to the major transport modes, with separate committees regulating air, rail, water and motor vehicle transport. Although certain other committees exist within CTC, they do not have their own resources. Instead, they draw upon resources of modal committees, as required. The Commodity Pipeline Transport Committee considers applications for building and operating commodity pipelines. The International Transport Policy Committee, collaborates with modal committees in considering the economic and legal aspects of international transport. The Review Committee deals with applications for reviews of the decisions or orders of any of the modal committees.

The Commission's organization also includes a number of branches that provide services to all committees. The Traffic and Tariffs Branch handles all matters concerning the regulation of tariffs (except for air transport), and it administers several subsidy programs. The Research Branch studies economic and social issues relating to transportation in Canada. Other branches provide legal, management and administrative services to the Commission.

Figures 3 and 4 illustrate the relationship between the Commission's activities and its organization structure.

Most of the CTC's 800 employees work in the National Capital Region. However, the Railway Transport Committee has over 100 staff members working in six regional offices in Moncton, Montreal, Toronto, Winnipeg, Calgary and Vancouver, and the Air Transport Committee has staff in Vancouver, Edmonton, Winnipeg, Toronto, Montreal and Moncton. In addition, the Commission operates a Western Division, in Saskatoon, with a staff of 18 that handles various regulatory functions of concern to western Canada.

Figure 3: Canadian Transport Commission Organization Structure

D. Planning Perspective

1. Environment

The demand for regulatory decisions is influenced by many factors, which are characterized by complex interrelationships, have a high degree of unpredictability and which are quite outside the Commission's control. The Commission does not have any option under the law but to respond to this demand as and when it arises. Accordingly, the Commission must develop and maintain a capacity to handle the demand in a timely and judicious manner. The factors that must be considered in the planning process are discussed below.

Economic Climate: The general climate, as well as specific sectoral economies, influence the volume, type, destination and frequency of goods and passengers requiring transportation, thus impacting on the nature and levels of service proffered by carriers. This in turn affects the number and nature of licence applications, tariff filings, company merger or acquisition proposals and other matters of economic regulation, as well as the number and nature of complaints and interventions to which the Commission must respond. The number of transportation services eligible for subsidy and the amount of subsidization claimed are also influenced by the economic climate. In view of the medium-term economic outlook, the CTC expects that the demand for regulatory decisions will remain high, as companies adjust to a more complex and competitive business environment.

Technological Change: As new technology is introduced to the transportation sector, the Commission is called upon to regulate the impact on economic performance and, in the case of railway transport, on safety. Normally, the nature and pace of this technological change is such that this factor is not a major influence on planning in the Commission, although a number of innovations in the railway transport industry (cabooseless trains, high speed passenger trains) promise to have a significant effect in that regard over the term of this Expenditure Plan.

Regulatory Climate: Regulatory change in the United States (particularly the rail and trucking modes) has raised concern about the resulting impact on Canada. As well, the Canadian federal government is concerned with the influence that economic regulation has on transportation costs. The Commission has undertaken initiatives to revise the regulatory framework in respect to air transportation, and is working with the provinces in their review of inter-provincial motor vehicle regulation to assist in ensuring uniformity. A review is underway with respect to the impact in Canada of U.S. rail deregulation. The CTC is also examining the nature and operation of "multimodal" transport services (services utilizing more than one form of transportation, e.g., rail and truck) to ensure that the regulatory framework is appropriate in these circumstances. It is expected that

issues of regulatory reform will continue to be examined throughout the term of this Expenditure Plan.

Government Policies: Decisions by the federal government, particularly on transportation policy and, in general, on economic policy, directly affect the Commission. Over the term of this Expenditure Plan, the Commission expects that many regulatory decisions will have to be made in response to new or revised policies on such matters as air transport, grain transportation, and railway passenger and freight services.

International Events: Initiatives by foreign governments or international organizations arise continuously, often unexpectedly. When they do, a Canadian position is required. Accordingly, the Commission is called upon to provide a regulatory perspective, particularly in the case of air and marine transport. In the truck, rail and air modes, Canada-U.S. transborder transport matters continue to require input from the Commission.

2. Program Effectiveness

Economic Regulation: The Commission's economic regulatory action is carried out according to criteria designed to promote viable, competitive and stable carriers that serve the public adequately and contribute to the economic well-being and growth of Canada. These criteria are applied according to the circumstances specific to each case. Therefore, regulatory effectiveness cannot easily be defined in measurable terms. This customized approach to regulation means that program effectiveness measures must be indirect.

Railway Safety Regulation: Several factors (in addition to the Commission's regulatory and inspection activities) affect railway safety -- e.g., the volume of traffic, technological developments and the type of goods being moved. It should be recognized, therefore, that changes in the level of railway safety cannot be attributed solely to actions taken by the CTC. Figures 5 and 6 indicate recent trends in derailments and crossing accidents. It should be noted that while the aggregate number of accidents has increased somewhat, the rate, in relation to traffic and goods moved (gross tonne miles), continues to decline.

Figure 5 : Mainline Derailments

Figure 6: Railway Crossing Accidents

Analysis and Advice: Federal government transportation policies and program decisions take into account economic and regulatory implications. The information and advice that the CTC provides are inputs to those policies and decisions. In judging the effectiveness of those inputs, one could rely on the evaluation of the results of policies and program decisions themselves to indicate the effectiveness of the Commission's advice and information.

Subsidy Administration: Generally, the Minister of Transport formulates policy on transportation subsidies. The Commission advises the Minister on these matters and administers subsidy programs in accordance with terms and conditions specified by the government. Figure 7 gives a general indication of the recipients of subsidy programs administered by the Commission.

Figure 7: Subsidy Programs Administered By The Canadian Transport Commission

Program	Estimates 1985-86 ($000)	Recipients	Beneficiaries
Maritime Freight Rates Act Subsidy	14,428	Railways	Producers, shippers, railways in the "select territory" (the Atlantic provinces and Gaspé region).
Atlantic Region Freight Assistance Act Subsidies	43,123 12,750 571 56,444	Highway carriers Railways Water carriers	Shippers, transportation industry in the "select territory" (the Atlantic provinces and Gaspé region), consumers and producers in eastern Canada.
Railway Act Subsidies			
• For operation of uneconomic Branch Lines	9,240	Railways	Communities throughout Canada located along specific branch lines identified as uneconomical but being operated.
• For operation of uneconomic Passenger Services	9,900	Railways	Train passengers residing in communities throughout Canada using passenger services (other than VIA).
• For grain and flour moving to export through Eastern Ports	40,400	Railways	Flour mills, grain producers, railways, small water carriers on the Great Lakes, Atlantic and Georgian Bay ports and transfer elevators.
Western Grain Transportation Act Subsidies	634,400	Railways	Western grain producers, communities and grain facilities located along "grain dependent" lines.
Total Subsidies	784,812		

Section II
Analysis By Activity

A. Air Transport

Objective

To promote, through economic regulation, a safe and effective national air transportation system that meets the air travel needs of Canadians and visitors to Canada with little need for direct operating subsidies.

The Air Transport Activity also has the following sub-objectives:

- to regulate the entry and exit of air carriers for the provision of commercial air services so as to meet the needs of Canadians and visitors to Canada for air travel through an efficient, financially viable air carrier industry;
- to regulate tariffs for the provision of commercial air services so as to ensure that they are just, reasonable and non-discriminatory and, when applicable, consistent with Canada's international and bilateral undertakings;
- to enforce the economic regulations promulgated for the establishment and operation of commercial air services to protect the travelling public and the interests of licensed carriers;
- to develop, process and promulgate regulatory additions and amendments to maintain a relevant, effective environment for the economic regulation of the air carrier industry;
- to develop and process information and advice to the Minister of Transport on the development and operation of commercial air services, any matter relating to civil aviation, and on the regulatory aspects of air transport; and
- to administer federal government subsidies for the operation of commercial air services in the public interest.

Resource Summary

The Air Transport Activity accounts for 17.0% of the total program expenditures (excluding transfer payments), and 0.9% when transfer payments are taken into account. This activity accounts for 17.9% of the total person-years.

Description

Under the National Transportation Act, the Canadian Transport Commission is responsible for developing and enforcing economic regulations for the civil aviation industry, as provided for in the Aeronautics Act, and as set out in the Air Carrier Regulations.

The Air Transport Committee carries out the bulk of the regulatory work from the Commission's national headquarters in Ottawa. There are, however, six regional offices to assist in the enforcement of the Air Carrier Regulations, and the Western Division, in Saskatoon, handles certain aspects of the licensing of local air carriers in the western provinces.

The Air Transport activity includes the following sub-activities:

Licensing: Licensing commercial carriers to provide air service is an essential element of the economic regulation of the industry.

Licensing protects both the interests of consumers by ensuring that carriers meet standards, and the interests of licensed carriers by maintaining fair competition. Domestic and international operators and those providing scheduled and charter passenger services are subject to licensing. When an operator applies to the Commission for a licence, licence amendment, or a permit, the Commission, in most instances, issues a Decision or Order. If the Decision or Order is favourable and the carrier meets stipulated conditions (if any), the Commission will issue a licence, an amendment to a licence or a permit. Licence documents specify what points the air carrier may serve, the size of the aircraft that may be used, and any restrictions that the Air Transport Committee may impose on the operator.

Tariffs: Every commercial carrier must file a tariff with the Commission specifying the charges and "conditions of carriage". The Commission reviews these tariffs to protect the consumer and other carriers by ensuring that the conditions of carriage and fares are just and reasonable, and that the travel conditions on special fares are appropriate and consistent. Tariff regulation also requires that the CTC investigate any complaints or allegations of malpractices involving air carriers.

Enforcement: Commercial carriers who may be operating illegally or carriers that are operating without a licence are investigated. These investigations are intended to stop any unauthorized person or company from operating commercial air services and to ensure licensed operators comply with regulations. Where operators fail to comply, the Commission may impose penalties, or the Crown may prosecute.

Regulatory Analysis and Policy Advice: The CTC provides advice on current economic issues affecting the air carrier industry and civil aviation in Canada and develops appropriate economic regulations. The Committee monitors the industry and the policy environment to identify the need for any additions, deletions or changes either to the Air Carrier Regulations, or to the policies and practices of the Air Transport Committee. In addition, the Committee carries out investigations and surveys and makes recommendations to the Minister of Transport on all matters relating to commercial air services. This advice may be provided on direction from the Minister or on the Committee's own motion, and may relate to draft policy proposals, international negotiations, proposed amendments to the Aeronautics Act or other matters.

Subsidy Administration: Under government policy, only limited direct operating subsidies of commercial air carriers are envisaged. This sub-activity involves:

- administering and paying subsidies to Quebecair and Eastern Provincial Airlines under the Regional Air Carrier Policy (although these subsidies are scheduled to be discontinued in 1985, approval is being sought for their extension); and

- providing administrative services to Transport Canada for the Prairie and St. Leonard Air Services subsidies.

Performance Information/Resource Justification

Licensing: The licensing sub-activity consumes 68 person-years. To a large extent, workload depends upon the volume and complexity of applications for licences that individuals and companies submit. Licensing procedures involve Public Notice, Pleadings, Public Hearings (in some cases), issuing Orders and Decisions, issuing Licences and providing applicants with various avenues of appeal. The target for 1985-86 is to process 98% of all applications within five months after receipt of a complete application. The remaining 2% represents the most complex applications that will require a Public Hearing or involve the resolution of legal issues thus extending the time for processing. Figure 9 illustrates the licensing workload.

Figure 9: Decisions, Orders, Licences (Domestic)

	Estimated 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Decisions				
Public Convenience and Necessity (PC&N)	175	290	251	284
Non-PC&N	518	402	344	535
Transfers	206	144	124	93
Orders	1,420	1,900	1,261	1,051
Licences	593	641	528	787
Temporary Authorities and Waivers	363	393	339	-

Permits are issued to air carriers to operate charter services. Subsequent applications for specific charter flights are also reviewed. Figure 10 illustrates the workload in this area.

Figure 10: Charter Applications and Flights

	Estimated 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Applications	2,100	2,100	2,078	2,059
Flights	23,500	25,140	23,128	22,296

Tariffs: Reviewing and filing tariffs involves 34 person-years. Work in this area is also largely reactive, and involves examining all tariffs, conditions of carriage and service schedules filed with the Committee. Zones of flexibility were established in accordance with the Committee's report following the domestic air fare hearing in the Spring of 1984 that allow carriers to adjust fares on one day's notice rather than the 30 days' notice as was previously the case. Fares outside the zones of flexibility must now be reviewed on 14 days' notice. These two adjustments have made a major improvement in the level of service. Figure 11 identifies trends in tariff filings and is representative of workload in this area.

Figure 11: Tariffs

	Estimated 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Tariff Filings	234,700	208,200	140,135	151,573
Departures from Air Carrier Regulations (ACR's)	3,000	2,500	2,795	2,797
Complaints	550	500	374	351
Charter Contracts	250	250	684	1,461
Orders	160	130	90	123

Enforcement: The enforcement sub-activity consumes a total of 23 person-years. In 1984-85, additional resources were approved to expand the enforcement program capability of the Committee. This will allow the Committee to provide more effective enforcement of licence conditions and tariff regulation which will likely result in an overall increase in all types of cases investigated. Figure 12 illustrates the responses to complaints and observed illegal action in recent years.

Figure 12: Enforcement

	Estimated 1985	Forecast 1984	Actual 1983	Actual 1982
Cases referred to RCMP	160	150	161	127
CTC administrative action	240	126	102	69
Warnings	60	34	61	42
Unfounded Complaints	50	24	43	31
Total	510	334	367	269

Regulatory Analysis and Policy Advice: A total of 14 person-years and $756,000 is assigned to this sub-activity. In 1985-86, the Commission will study a number of issues, including domestic unit toll operations, methodology for the establishment of reference fares and guidelines for the provision of upward pricing, financial documentation, fares, resaleable charters, international air policy and will prepare for international bilateral negotiations.

During calendar year 1983, 12 sets of amendments to the Air Carrier Regulations (ACR's) were approved by the CTC, and a similar number is anticipated for 1984. This should remain stable in 1985-86, however the amendments are expected to be of a more complex nature because of the trend toward lessening economic regulation in southern Canada while retaining a comparatively more regulated regime in the North.

In respect of the move towards decreased economic regulation in southern Canada, the Commission anticipates that it will be called upon during 1985-86 to respond to reports and recommendations emanating from the House of Commons Standing Committee on Transport dealing with such issues as subsidy policies and the role of Air Canada. The Commission also considers it probable that its advice and input will be sought concerning development of draft amendments to the National Transportation Act and the Aeronautics Act.

Management and Secretariat: This sub-activity is assigned 11 person-years.

The Secretariat is responsible for the work associated with Committee Meetings, and the administrative elements of Public Hearings. In addition, the Secretariat prepares the Orders and Decisions of the

Committee, and the Secretary signs all official correspondence on behalf of the Committee.

The Management group includes the office of the Executive Director and a small staff unit to oversee the personnel, financial and administrative services needs of the Committee.

B. Railway Transport

Objectives

To regulate the operation of railway transport services in Canada to protect the interests of the users of transportation, to foster Canada's economic well-being and growth, and to coordinate and harmonize the operations of transport carriers.

To regulate railway transport services so that they are operated in a manner that minimizes accidents and the resulting fatalities, injuries, and property damage.

To develop methods for determining railway costs; and to process payments for subsidizing uneconomic services required in the public interest, and for subsidizing the transportation of certain commodities.

Resource Summary

The Railway Transport Activity accounts for 39.4% of the total program expenditures (excluding transfer payments), and 91.6% when transfer payments are taken into account. This activity accounts for 36.6% of the total person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

	768,722	307	729,390	310	404,924	314

Description

This activity is carried out by Railway Transport Committee staff at headquarters and the regional offices, and by the rail transport components of the Traffic and Tariffs Branch and the Western Division. Railway Transport includes the following sub-activities. Note that the sub-activities have been modified from those reported in 1984-85 to more accurately describe the work under the Railway Transport activity.

Safety Regulation: Railway Safety Regulation consists of developing and promulgating railway safety regulations; updating standards to ensure that they take into account technological and other changes; monitoring compliance with regulations through the investigation of accidents, the inspection and quality control of equipment, infrastructure and operations (e.g., rolling stock, track and compliance with operating rules); and monitoring the movement of dangerous goods.

The Railway Transport Committee must approve the design and quality of all construction or reconstruction of railway/highway crossing projects (underpasses, overpasses, level crossings, etc.). The same is true for electrical projects such as warning lights and signals. Such projects must be approved by the CTC before work starts and when it has been completed. Partial funding (up to 80%) is provided on some of these projects under the provisions of the Railway Relocation and Crossing Act.

Quality of Service: The Commission investigates complaints from the public regarding railway services. As part of this work, railway and station operations are routinely inspected and the quality of passenger services monitored. The Commission is also addressing the rail transportation needs of the handicapped.

When railways wish to abandon branch lines, close or centralize stations, remove track or consolidate freight services, the Commission reviews their applications for permission to do so. These reviews ensure that any changes in service are not detrimental to the public interest. Hearings are held where necessary.

In addition, the Western Division administers the program for financial audits and conducts engineering inspections in support of Transport Canada's branch line rehabilitation program.

Traffic and Tariff Analysis: The work of this component includes examining and filing railway tariffs in accordance with statutory provisions; establishing rates for moving canola products, and grain and flour under Section 272 of the Railway Act; administering the Maritime Freight Rates Act and the Atlantic Region Freight Assistance Act which provide for subsidies to railway companies for westbound traffic originating in the "select territory" and local traffic

originating and terminating within the "select territory" (the four Atlantic provinces and the Gaspé Region); conducting investigations respecting agreements, contracts and arrangements of a traffic and tariff nature entered into between shippers and carriers in connection with formal applications, inquiries and hearings being conducted by the Railway Transport Committee; resolving complaints received by the Commission on traffic and tariff matters, including agreements, contracts and arrangements of a traffic and tariff nature and related services and conditions of carriage and developing and maintaining a comprehensive rail traffic database in support of modal committee requirements.

Economic Analysis and Subsidy Administration: The work in this component includes: developing a framework for railway accounting called the Uniform Classification of Accounts; auditing the railways' accounts to determine the extent to which they have adhered to this framework; promulgating costing regulations and auditing and approving the railways' methods of calculating their costs; determining costs for use in setting rates under the Railway Act; and auditing CP and CN charges to VIA which in turn determine the level of funding VIA Rail receives from the Minister to pay CN and CP for the services they provide.

Within this sub-activity, costing methodologies to be used by railways are established. The railways' costs, revenues and losses for each subsidized branch line or passenger service are verified in order to ensure that payments to railways under Sections 256, 258 and 261 of the Railway Act reflect losses incurred by them, in accordance with CTC costing regulations for operating uneconomic branch lines and passenger services (other than VIA Rail). These lines and services are subsidized if the losses as determined by the CTC are likely to continue in the future and the service is considered necessary to the public interest.

In addition, the CTC administers responsibilities under the Western Grain Transportation Act, including the establishment of the cost-based rate scale, costing reviews and monthly payments to the railways. Under Section 272 of the Railway Act, costs are determined to form the basis for setting rates and subsequently making payments to railways to move grain and flour for export from inland points east of Thunder Bay to an Eastern port.

Performance Information/Resource Justification

Safety Regulation: This sub-activity consumes 154 person-years and $18,929,000.

Monitoring the extent to which railways comply with regulations utilizes 46 person-years. The level of monitoring is based on the percentage of population that should be inspected in order to be

confident that regulations are being respected and also on levels of compliance in previous years. In 1985-86, emphasis will continue to be given to checking the railways' quality control procedures. In addition, a number of specific questions will be addressed, including the safety implication of cabooseless trains.

The CTC will assume expanded responsibilities in the area of dangerous goods transportation as regulations pursuant to the 1980 Transportation of Dangerous Goods Act are phased in. Emergency response to and investigation of dangerous goods accidents and incidents will intensify, as will the inspection programs concerning railway cars and facilities handling dangerous goods. Currently, 26 person-years are assigned to the dangerous goods activities under the Railway Act, the National Transportation Act and the Safety Containers Convention Act. Consideration is being given to augmenting this resource base in order to assume the expanded responsibilities under the Transportation of Dangerous Goods Act.

Work was begun in 1984-85, and will continue into this fiscal year, on reviewing the Uniform Code of Operating Rules (the basic document covering the safe operation and control of railways under CTC jurisdiction), as well as standards concerning safety inspections and qualification standards for railway personnel.

In 1985-86, 50 person-years will be allocated to the railway/highway crossing and construction program. This program contributes to safety and reducing crossing accidents by granting approval for the improvement of crossings. It is expected that about 1,100 applications will be received and processed within an average elapsed time of 6 months. Of these applications, approximately 250 will be approved for funding under the Railway Relocation and Crossing Act. Currently, $10 million is allocated per year for funding these projects. Specific initiatives for use of these funds in 1985-86 include the following:

- upgrading of signboards at public crossings ($1.5 million);
- upgrading of all warning device light units presently installed at railway/highway crossings ($.5 million per year over three years); and
- upgrading of warning device gate barriers ($1.5 million).

Figure 14 shows the number of orders issued concerning railway/highway crossing projects in recent years.

Figure 14: Railway/Highway Crossing Projects

Resources for accident investigations are linked to accident trends and the seriousness of accidents. Accident investigation utilizes 19 person-years. Figure 15 shows the proportion of accidents investigated in 1983-84 and the forecast for the following years.

Figure 15: Accident Investigation

Quality of Service: Figure 16 illustrates the number of branch line abandonment and agency centralization applications processed in recent years and the anticipated number for 1985-86. As these applications require investigation and may involve public hearings before a decision is rendered, they usually would require twelve months to process. These estimates could change as a result of the Commission's inquiry into possible alternative uses for railway branchlines threatened with abandonment. The inquiry will be completed at the end of June 1985.

Figure 16: Branch Line Abandonment, Agency Centralization

Traffic and Tariff Analysis: Railways are expected to file about 61,000 tariffs in 1985-86 which will consume 10 person-years to examine and process. Processing of subsidy claims from railways under the Maritime Freight Rates Act and Atlantic Region Freight Assistance Act will require 5 person-years in order to process 260 claims within 15 days average from the time the claim is submitted. The value of these subsidies in 1985-86 is expected to be $27,178,000. (see figure 7 on page 19). Studies of traffic and tariff matters (consuming 27 person-years) assist the Minister of Transport and modal Committees in their decision-making as well as providing information to industry, federal and provincial departments, and the general public. Specific initiatives for 1985-86 by type are summarized in Figure 17.

Figure 17: Traffic and Tariff Analysis 1985-86

Area	Resources P-Y	Resources ($000)	General Objective	Specific Initiatives 1985-86
Traffic Studies	7	323	To develop and maintain a comprehensive rail traffic data base and to disseminate data on traffic patterns, commodity flows and freight revenues.	Further development of data base, including: • expanded level of detail; • inclusion of railways other than CN and CP; and • expanded motor vehicle data.
Tariff Studies	13	9	To verify, develop and disseminate information respecting freight and passenger tolls and tariffs, conditions of carriage and levels of service.	Review provisions of the Western Grain Transportation Act in conjunction with the Railway Transport Committee.
Complaints and Applications Studies	7	21	To investigate traffic and tariff complaints and applications, and mediate and resolve complaints between shippers and carriers.	Continue enquiry into regulations affecting freight traffic inter-switching between railways under federal jurisdiction.

The Staggers Rail Act, which was passed by the United States Congress in 1980 extensively deregulated United States railroad pricing. This has created fundamental differences between the Canadian and United States freight rate tariff systems, which in turn has begun to cause problems for Canadian carriers and shippers. For example, United States rail carriers are able to enter into confidential contracts with shippers or receivers, while Canadian rail carriers must publish and make available for public inspection all tariffs and tolls. In 1984, the CTC completed a series of public hearings on this issue, and reported its findings to the Minister of Transport. It is expected that this matter will generate considerable demand over the next few years for investigations and regulatory decisions, as Canadian carriers and shippers adjust to the new economic regime.

Economic Analysis and Subsidy Administration: A total of 64 person-years are allocated to this component. Of these, approximately 50% are required to determine costs, revenues and losses for branch lines, passenger services; to administer the related subsidy programs; to conduct audits of CN/CP charges to VIA and to determine variable costs for freight movements. For example, the audit of railway claims for the financial year 1982 to VIA Rail (the most recent audit fully completed) resulted in a reduction of $6.6 million to the railways'

proposed settlement claims. Resources for subsidy administration are linked to the significance of claims in terms of dollars, the number of applications and claims submitted and the complexity of submitted claims. (Figure 7 (page 19) identifies the amount of subsidy paid under each program.) Some 25% of the resources for this component are required for the establishment of accounting standards, conducting financial and accounting audits through a multi-year cyclical audit program and to providing approved cost of capital rates for all costs determinations for railways.

The remaining 25% of resources relate to work under the Western Grain Transportation Act and special costing projects. The CTC must prescribe, annually, the rate scale for western grain transportation and pay monthly to the railways, the government portion of the rates applicable to the volume of grain moved. To do this, the CTC must determine which branch lines are to be designated "grain dependent", and estimate all other railway variable and fixed costs. In 1985-86, the first quadrennial costing review will be undertaken to determine the total costs for the transportation of grain by rail for Canada. The CTC is also responsible for monitoring railway investment plans and maintenance programs for "grain dependent" branch lines.

C. Water Transport

Objective

To regulate specific sectors of the water transport industry, to provide advice concerning the development and operation of water transport services, and to participate in the negotiation of international agreements in order to protect the interests of users and to maintain the economic well-being and growth of Canada.

Resource Summary

The Water Transport Activity accounts for 3.6% of the total program expenditures (excluding transfer payments), and .3% when transfer payments are taken into account. This activity accounts for 3.9% of the total person-years.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Economic Regulation	384	9	388	10	336	9
Transportation Analysis	428	10	454	10	427	9
International Maritime Transport	346	6	318	6	301	6

Management and Secretariat	415	7	394	7	383	7
	2,185	33	2,137	34	1,945	32

Description

Canadian public policy towards the water transport industry is largely non-interventionist in character. However, legislation in the field designates certain specific sectors and commercial transactions as being subject to economic regulation, and requires the Commission to carry out public inquiries concerning specific issues, to provide information and advice on a wide range of water transport matters, and to participate in the negotiation of international agreements and in the economic work of international organizations.

Economic Regulation: The Commission's economic regulation of water transportation can best be discussed in terms of four principal areas of responsibilities.

- Under the Transport Act, licensing of water carriers and approval of carriers' tariffs is carried out with the primary aim of ensuring that communities in the sparsely populated areas of the Mackenzie River and Western Arctic have reliable water transport services to supply essential items (food, fuel, etc.). Licensed carriers also play a major role in providing logistic support for northern mining and exploration operations.

- The Shipping Conferences Exemption Act allows "conferences" (associations of international shipping lines) to set uniform rates and coordinate services, subject to legislative provisions. The CTC maintains tariff filings and a record of agreements, conciliates disputes and ensures compliance.

- Regulatory investigations are carried out under the National Transportation Act if objections are raised to proposed acquisitions of an interest in water carriers by another transportation company, or to the pricing practices of water carriers, in order to ensure that the action is not prejudicial to the public interest. Under the Pilotage Act, the CTC undertakes an inquiry and makes binding recommendations if objections are raised to proposed tariffs.

- Within the "coasting trades" (water transportation between Canadian ports), the aim is to ensure Canadian participation while allowing foreign vessels temporary entry provided that no suitable Canadian ship is available. The CTC advises the Minister of National Revenue on the availability of suitable Canadian ships (custom duties for foreign ships are reduced if no suitable Canadian ship is available).

Transportation Analysis: This sub-activity includes the economic and financial analysis directly related to economic regulation as well as the CTC's advisory function concerning water transportation. It

involves analysing and assessing economic, operational, and regulatory matters that affect the transportation of goods by water (or by means of water and other modes). In coordination with Transport Canada, information and advice is provided on specific problem areas and proposed policy or legislation for both regulated and unregulated sectors, with the aim of achieving efficient and adequate transportation services.

International Maritime Transport: The Commission's role internationally, carried out in conjunction with other government departments, involves responding to regulatory initiatives by foreign governments and international organizations, the negotiation of international agreements and participation in the economic work of international organizations. The aim is to protect Canadian interests on the international scene.

Freight Assistance Subsidy to Atlantic Region Carriers: This sub-activity includes processing and certifying subsidy payments to water carriers under the Atlantic Region Freight Assistance Act (this subsidy program is discussed on page 41).

Performance Information/Resource Justification

Economic Regulation: The Commission's work in regard to the Mackenzie River system involves processing 13-14 licence applications each year, approving tariffs and monitoring provision of service. The goal is to render decisions on licence applications by the end of February in respect of the following navigation season.

While the number of shipping conferences has remained stable at 48 per year, the volume of filings with the CTC has increased; from 33,319 documents filed in 1982 to 39,489 documents filed in 1983. The Shipping Conferences Exemption Act is due to expire in March 1985 and replacement legislation may impact on CTC workload. The level of work concerning acquisitions has remained stable. An increase in the number of tariff challenges, which could result if the pricing policy of Pilotage Authorities significantly change, impacts on workload related to the Pilotage Act.

Coasting trade workload increased sharply with the extension of Canadian jurisdiction to the outer edge of the continental shelf. Activity has stabilized at a relatively high level, with the CTC processing 130-150 applications per year.

Transportation Analysis: In the advisory role, work is concentrated on matters relating to regulatory responsibilities with specific initiatives based on established priorities. In 1985-86, the following specific initiatives are planned in addition to on-going work:

- review and assessment of the performance of Mackenzie River carriers and related regulatory policy issues;

- analysis of the structure and performance of ocean liner services and related matters of deep sea shipping policy; and

- analysis of multi-modal transport, particularly in relation to ownership, and the impact on the provision of container services to Eastern Canada and Canada-U.S. container services.

International Maritime Transport: Work is concentrated on matters concerning the international regulation of shipping. Bilateral shipping arrangements will be given more attention. Based on established priorities particular issues planned to be addressed in 1985-86 include:

- response to unilateral regulatory initiatives by South American countries;

- participation in negotiations concerning shipping relationships between Organization for Economic Cooperation and Development (OECD) member states and between OECD members and third world countries;

- participation in United Nations Conference on Trade and Development (UNCTAD) initiatives and specific aspects of Canadian international law related to third party liability and the liability regime between shippers and carriers concerning cargo.

D. Motor Vehicle Transport

Objectives

To regulate the development and operation of interprovincial and international truck and bus services in order to protect the interests of the users of transportation, to maintain the economic well-being and growth of Canada, and to coordinate and harmonize the operations of transport carriers.

To administer that portion of the Atlantic Region Freight Assistance program that subsidizes the cost of transporting designated commodities, by motor vehicle undertakings from or within the Atlantic Region.

Resource Summary

The Motor Vehicle Transport Activity accounts for 4.0% of the total program expenditures (excluding transfer payments) and 5.3% when transfer payments are taken into account. This activity accounts for 5.6% of the total person-years.

Figure 19: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Motor Vehicle Regulation	236	4	221	4	162	3
Freight Assistance Subsidy to Atlantic Region Carriers	44,686	43	42,865	43	39,347	42
	44,922	47	43,086	47	39,509	45

Description

This activity has two components: Motor Vehicle Regulation and Subsidy Administration.

Motor Vehicle Regulation: Under this component, submissions relating to proposed trucking company mergers or acquisitions are examined and recommendations made as appropriate. When someone affected by a proposed acquisition objects on the grounds that it will unduly restrict competition or otherwise be prejudicial to the public interest, the Commission investigates and such investigations may include public hearings.

The Motor Vehicle Transport Committee also examines applications to truck goods on Sundays; examines and files documents on CN Roadcruiser (Newfoundland) bus service tariffs and levels of service, and, from time to time, conducts hearings in these matters. Finally, it works with Transport Canada and the provinces to develop simple and uniform regulations to facilitate inter-provincial truck and bus transportation. With the adoption of the Motor Vehicle Transport Act in 1954, the responsibility for the direct regulation of extraprovincial carriers was delegated to the motor carrier boards of the provinces, which regulate these undertakings just as they do intraprovincial carriers.

Subsidy Administration: The Atlantic Region Freight Assistance Act provides for subsidies for transporting commodities within the "select territory" (the four Atlantic provinces, and the Gaspé Region) and from points within the "select territory" to points west. Subsidy claims from trucking companies are processed, audited, and certified for payment. In some cases, the Commission carries out field investigations and holds discussions with provincial governments. At times, hearings are also held.

Performance Information/Resource Justification

Motor Vehicle Regulation: A total of four person-years and $236,000 are assigned to Motor Vehicle Regulation. Public hearings pertaining to Lord's Day Act applications are only necessary in complex cases or when objections are raised with respect to applications. The other cases are heard through file hearings. In 1985-86, the Commission is expected to handle applications for 30 permanent Lord's Day authorities and 185 temporary authorities. Decisions respecting permanent authorities are usually rendered within 50 days, 28 of which are required for mandatory posting in the Canada Gazette.

All transport companies under the jurisdiction of the Parliament of Canada are required to give notice of a proposed acquisition of another transport business or undertaking. The Commission endeavours to ensure that local populations are aware of transactions that could

affect transportation patterns in their regions through either the establishment of monopolies or of schedules not in the interest of shippers or consignees. Some 40 notices of acquisition are expected to be processed in 1985-86.

Freight Assistance Subsidy to Atlantic Region Carriers: Subsidies are calculated as a percentage of transportation costs; different percentages apply depending upon the commodities, their origin, and destination.

A staff of 43 person-years from the Commission's Traffic and Tariffs Branch handles a volume of approximately 12,500 claims per year. The average time required to process a claim, from its receipt to the issuance of a cheque, is about 55 days. The turnaround time for any given claim varies considerably as a result of many factors (e.g., the number of claims in process, the number of errors in the submissions, the need for further documentation).

Figure 20 illustrates the various freight assistance subsidy programs to all carriers in the Atlantic Region.

Figure 20: Freight Assistance Subsidies to Atlantic Region Carriers

Program	Estimates 1985-86 ($000)	Recipients	Beneficiaires
Atlantic Region Freight Assistance Act Subsidies			
Intra Segment:			
Truck	25,576	Highway carriers	Shippers, transportation industry in the "select territory" (the Atlantic provinces and Gaspé region), consumers and producers in eastern Canada.
Rail	5,542	Railways	
Water	571	Water carriers	
Westbound Segment:			
Truck	17,547	Highway carriers	Producers, shippers, railways, truckers in the "select territory" (the Atlantic provinces and Gaspé region).
Rail	7,208	Railways	
Total Subsidies	56,444		

E. Research

Objective

To develop, analyse and provide information and advice on the economic and social aspects of all modes of transport within, into or from Canada.

Resource Summary

Research accounts for 9.3% of the total program expenditures (excluding transfer payments), and 0.5% when transfer payments are taken into account. This activity accounts for 8.2% of the total person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Research	4,183	69	4,071	71	3,708	67

Description

Research provides support to the Commission and its committees; responds to requests from the Minister of Transport for studies on subjects of concern to the government; carries out studies on its own initiative; and participates in interdepartmental working groups. Most work is associated with the Commission's research mandate, pursuant to Sections 7(4) and 22 of the National Transportation Act. The studies concern all modes of transportation. They involve analysis and expertise in economics, statistics, sociology, systems analysis, finance, regulation and various institutional arrangements and constraints.

Three major categories of research work are carried out: studies that respond to requests to deal with current problems; analyses of potential transport issues before they become current; and methodological or background studies that contribute to the first two types of research projects.

The Research activity includes five areas:

Freight Studies: deal with movements of bulk commodities and agricultural products, primarily by rail and commodity pipelines.

Passenger Transport Studies: specializes in airline research, international air transport, and other kinds of passenger transport.

Transport Industries Analysis: concentrates on marine economics, shipping issues, multimodal transport and trucking.

Economic and Social Research: carries out projects requiring professional expertise in economics, statistics, and sociology, and acts as a support group in these areas.

The Office of the Coordinator, Transportation of the Handicapped: carries out research on the economic and social aspects of regulatory issues relating to transportation of the handicapped, provides advice, and makes recommendations to the modal committees.

Commission policy is to make as much of its research as possible available to the transport sector and the general public by publishing reports to increase the public's knowledge and understanding of the Canadian transport system and transportation issues.

Performance Information/Resource Justification

The end products of research are information and advice relevant to decision-making by the modal committees of the Commission or the Minister of Transport and the general public. Resource requirements are based on the need to maintain the ability (in terms of the mix and quantity of expertise) to anticipate issues and to respond to the demand for information and advice, the level of which is estimated from a knowledge of issues that face the Commission or the federal government.

Research is a service. Its performance is judged on the extent to which it produces appropriate, timely and accurate studies to assist the decision-making of the Commission or the Minister of Transport.

Major research projects planned for 1985-86 are outlined in Figure 22.

Figure 22: Research Projects 1985-86

Area	Resources P-Y	Resources ($000)	General Objective	Specific Initiatives 1985-86
Pricing, Subsidies Capacity	17	950	To identify capacity, equipment, and investment needs, and the different combinations of pricing subsidy and institutional changes to meet these needs; to examine new pricing tools and their impact on users carriers.	Tracking of impact of regulatory reform on air fares, level of service, and financial health of air carriers. Studies of rail productivity and means of increasing efficiency. Studies of transport system capacity and means of increasing it, especially in Western Canada. Studies of rail passenger service, including means of improving VIA's performance. Studies on the need for, and the consequences of, a Canadian merchant marine.
Service Costing	8	580	To develop costing methodologies, both to satisfy legislative or policy requirements or as inputs to other projects.	Participate in reviewing methodology for measuring cost of capital for railways. Develop methodology for costing airline services. Develop costs of marine transport of selected commodities and routes.
Competition Regulation	28	1,403	To examine the extent to which competition can be substituted for regulation, and impacts for regulation of changing environment, leading to new regulatory tools and approaches.	Studies of possible changes in national transportation policy and the regulatory implications. Studies of the role of liner conferences in deep-sea shipping and the consequences for rate structures. Regulatory tools for - air services in northern and remote regions - setting bus rates in Newfoundland - commodity pipelines
Intermodal Transport	5	500	To examine coordination of various modes, including their regulation and development.	Extend a simulation model of western grain transportation and use it in review of the Western Grain Transportation Act. Examine the relative advantages of routing overseas traffic through various ports.
International Agreements	6	350	To develop advice for External Affairs regarding impact for Canada of various international transport agreements.	Support for air bilateral agreement negotiations. Evaluation of marine and multi-modal proposals (UNCTAD).
Transport Demand	5	400	To provide information for various types of transport services.	Assist in identifying needs of disabled travellers and the measures that could be taken to help them. Develop better forecasting methods and models for freight and passenger traffic.
Total	69	4,183		

F. Management and Administration

Objective

To decide on regulatory matters required of the Commission; and to develop and operate central management processes and administrative services in support of the Commission's work.

Resource Summary

Management and Administration accounts for 26.7% of the total program expenditures (excluding transfer payments), and 1.4% when transfer payments are taken into account. This activity accounts for 27.8% of the total person-years.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Commissioners and Regulatory Support	5,379	88	5,341	88	4,971	88
Corporate Management	6,541	145	5,989	146	6,397	156
	11,920	233	11,330	234	11,368	244

Description

The Management and Administration activity comprises the following components. Note that the sub-activities have been modified from those reported in 1984-85 to more accurately describe the work under the Management and Administration activity.

Commissioners and Regulatory Support: This component consists of the Executive Branch (President, Vice Presidents, Commissioners and their staffs), Legal Services, and Secretariat, both at Headquarters and in the Western Division. The activities undertaken by this component are those directly related to the regulatory process (i.e., regulatory decision making, legal advice, hearing arrangements, etc.).

Corporate Management: This component consists of the Comptroller's Branch and the Personnel Branch. The Comptroller's Branch has

responsibilities in the areas of planning, evaluation, financial and material management, accommodation, telecommunications, records management, word processing and EDP systems. The Personnel Branch provides advice and assistance on all matters pertaining to human resources management, classification and staffing, training and development (including official languages and affirmative action programs) and staff relations.

Performance Information/Resource Justification

Hearings: A major focus of the Executive, Secretariat and Legal Services is the hearing process. Regulatory decisions are based on the outcomes of hearings. The appropriate modal committee determines whether or not a public hearing (as distinct from a file hearing) is necessary in light of the issue involved. Figure 24 illustrates the number of public hearings in recent years. In 1984-85, the Commission experienced a significant increase in the number of issues concerning regulatory reform and technological change, whose resolution required public input. Hearings of this nature are normally more complex, involving more sitting days and multiple locations, than hearings on a specific application or on complaints. It is expected that this greater level of activity, in terms of the number and complexity (hence the cost) of the hearings, will continue in 1985-86.

Figure 24: Public Hearings

	1984-85		1983-84		1982-83	
	Hearings (forecast)	Hearing Days	Hearings	Hearing Days	Hearings	Hearing Days
Air Transport	7	45	9	39	14	39

Western Division	9	27	3	7	14	23
Total Commission	44	317	45	176	60	123
Estimated Cost to the CTC of Public Hearings	$1,168,000		$520,000		$388,000	

Corporate Management: In addition to on-going work in the personnel and financial areas, this component conducts program evaluations in accordance with the CTC's approved program evaluation plan.

In 1985-86, program evaluations will be completed on the transportation of dangerous goods by rail program and the railway/highway crossing and construction program. Evaluations will be initiated on the air enforcement and railway quality of service programs.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditure by Object

Figure 25 displays CTC costs by type of expenditure. The major types of expenditures, salaries and transfer payments are further analysed in Figures 26 and 27.

Figure 25: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	31,673	30,296	28,104
Contribution to employee benefit plans	4,435	3,928	4,131
Other personnel costs	33	-	-

NOTE: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range columns show the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

The Commission has responsibility for administering various transfer payments in the form of contributions and statutory payments as detailed in Figure 27.

Figure 27: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions			
Regional Air Carrier Subsidy - payments are made to two regional air carriers to subsidize their operations on specific routes in remote areas:			
Eastern Provincial Airlines	-	-	866
Quebecair	-	-	634
	-	1,500	1,500
Maritime Freight Rates Act - Payments are made to the Railway Companies operating in the select territory designated by the Act, in order to reduce the tariffs they would otherwise charge to shippers and thus make goods from the territory more competitive. Estimated payments to each company for traffic moved during the calendar year 1985 are:			
Canadian National Railway Company	13,016	12,515	10,064
Canada and Gulf Terminal Railway	163	157	123
Canadian Pacific Railway Company	701	674	807

B. Cost Analysis

Net Program Cost

The CTC 1985-86 Estimates include authorities to be voted and statutory authorities. Also to be taken into consideration are services provided without charge by other departments such as accommodation by Public Works ($3,443,000) and services provided by Supply and Services ($81,000), Treasury Board ($564,000) and the Department of Labour ($5,000).

Figure 28: Net Cost of Program for the Year 1985-86

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Consumer and
Corporate Affairs Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $181,641,000 in support of the Department of Consumer and Corporate Affairs for 1985-86. The remaining expenditures, estimated at $11,721,000 for pensions and other employee benefits and the Minister's salary and motor car allowance will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Following are highlights for the current year for the Consumer and Corporate Affairs Program.

- In essence, the Department's role is to help create a legal and regulatory environment that is conducive to a strong and growing economy in which the interests of producers and consumers are fairly balanced. Consistent with emphasis on restraint, improved effectiveness and productivity, the Department's mission, then is to nurture private sector initiatives and to encourage productivity and competitiveness while at the same time ensuring the effectiveness of its consumer protection and advocacy role.

  In order to do so, the Department will continue to pursue legislative reform so as to modernize its laws in several areas, including Competition Policy, Patents, Copyright and Bankruptcy, and regulatory reform affecting traded goods. It will seek to stimulate the development and adoption of new technology by Canadian business through wider dissemination of patent information; to advance the concerns of Canadian consumers through continued stimulation of private sector and voluntary organizations; and to improve management effectiveness on several fronts, including office automation.

- The Consumer Affairs Activity will continue to apply legislation to promote a safe and equitable marketplace; actively search for resolution of marketplace problems by non-legislative means; cooperate and consult with the private and voluntary sectors in the implementation of voluntary compliance programs and other cooperative initiatives; reassess and adjust policies to reflect the evolutionary character of the law; and support consumer assistance initiatives of voluntary groups, business and business associations.

  In the Weights and Measures sub-activity, projections for 1985-86 indicate compliance rates should increase by approximately 4% over 1983-84 and coverage of the device population should reach 90% (based on a two-year inspection cycle). The sub-activity expects to have completed a national data base of the device population by the end of 1985-86. The Electricity and Gas sub-activity will continue to focus on meeting its legislated workload and no significant change in the current

compliance of some 95% is currently forecasted. In the Consumer Products sub-activity, concentrated efforts will continue to be made to resolve product problems as these are identified and greater emphasis will be placed on upper levels of trade. The Product Safety sub-activity will pursue initiatives which are currently underway, particularly in the field of domestic fires and toxic chemicals, and will react to new problems as these emerge. The Consumer Services sub-activity will carry out projects to encourage business in improving customer relation policies, will provide technical and financial assistance to consumer groups and will encourage all marketplace actors to respond to specific vulnerable consumer populations needs (page 24).

- In Corporate Affairs, efforts will continue toward maintaining acceptable quality and levels of service through automation and continued efforts to enhance management practices. The Bureau of Corporate Affairs intends to deal with its traditional demands for statutory services while enhancing its contribution to industrial development by actively encouraging technology transfer and refining its relationship with the business community. In the Bankruptcy and Corporations sub-activities and the Industrial Design area, workloads and outputs are expected to increase: in the Copyright area, workloads and outputs will remain stable and although Patent and Trade Mark applications may increase, personnel attrition will result in a decline of outputs (page 32).

- The Combines Investigation and Competition Policy Activity will process 900 complaints and complete 289 preliminary investigations in areas other than Marketing Practices; the Marketing Practices sub-activity will process 13,900 complaints and complete 3,300 preliminary investigations. The Regulated Sector sub-activity will focus its efforts on the growing number of specific regulatory proceedings which impact on major areas of the economy with the purpose of helping to define the parameters of regulation at the federal level.

  The Activity will provide full support to improving the market environment through changes to competition policy law which, when passed by Parliament, will effect major changes to the enforcement of competition law in Canada. Prior to passage, work will be required to develop effective enforcement policies and programs, and to ensure full public knowledge of the content and scope of the new provisions (page 40).

- In the Assistance Program for Urea Formaldehyde Foam Insulation (UFFI) Homeowners Activity, with approximately 73% of homeowners expected to have completed the corrective measures of their choice by April 1, 1985, it is anticipated that the remainder, a maximum of 12,500, will make claims in 1985-86 (page 50).

- The Bureau of Policy Coordination will continue to pursue its policy development activities, including policy research, analysis and consultations in support of legislative reforms to modernize departmental laws. Contributions will also be made to extra-Departmental discussions on policy questions affecting consumer interests. Strategic Planning activities will be further developed in 1985-86, including a review of consultation and communications aspects of policy reforms.

  The Program Evaluation and Internal Audit work will continue to support government-wide productivity initiatives. The completion of an evaluation of the Consumer Products sub-activity could result in proposals for the revision of the regulations affecting traded goods.

  With the phasing-out of the Metric Commission in March 1985, residual metric endeavours will be the responsibility of a small metric office established in the Bureau of Policy Coordination.

  As part of its ongoing efforts to improve productivity, the Administration Activity will continue automating its systems. Also within this Activity, higher workloads are expected in the Office of the Assistant Deputy Registrar General in both the Conflict of Interest Group and the Registration Division from ongoing responsibilities, and from implementation of approved recommendations from the Sharp-Starr Task Force on conflict of interest and post-employment guidelines (page 54).

- Revenue is generated mainly through fees for legal metrology inspections, patents, trade marks, copyrights, incorporations and bankruptcies, as well as from fines and forfeitures. This revenue is credited directly to General Revenues and is not available for use by the Department. Consultations have been initiated with a view to implementing significant revisions to fee structures in the areas of patents, trade marks, incorporations, and inspections of weighing and measuring devices. It is anticipated that 1985-86 revenue will exceed the 1984-85 forecast revenue by $38.4 million (see Supplementary Information, page 66).

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details see Page
Consumer Affairs	55,594	54,061	1,533	24
Corporate Affairs	26,692	25,133	1,559	32
Combines Investigation and Competition Policy	15,653	15,256	397	40
Metric Commission*	*	10,994	(10,994)	54
Assistance Program for Urea Formaldehyde Foam Insulation Homeowners	69,743	89,675	(19,932)	50
Administration*	25,680 *	26,850	(1,170)	54
	193,362	221,969	(28,607)	
Revenue	69,808	31,388	38,420	66
Person-years	2,467	2,589	(122)	

* The Metric Commission will be dissolved at the end of 1984-85 and a small Metric Office created within the Administration Activity (see Section II, page 54).

Personnel costs represent over 77% of total operating expenditures excluding capital, grants and contributions.

Explanation of Change: The financial requirements for 1985-86 are 13% or $28.6 million lower than the 1984-85 forecast expenditures. This reduction reflects the following major items:

	$ million
• a reduction in salaries, other operating costs and contributions related to the winding down of the Assistance Program for UFFI Homeowners including a reduction of 64 person-years	(19.9)
• a reduction of 33 person-years and a decrease in salary, other operating costs and contributions related to the phase-out of the Metric Commission partially offset by the establishment of a Metric Office	(7.8)
• an increase in salaries and contributions to employee benefit plans due to inflation	4.2

	$ million
• various other items including program reductions (total reduction of 25 person-years)	(5.1)

Explanation of 1984-85 Forecast: The 1984-85 forecast is $24.2 million lower than the 1984-85 Main Estimates of $246.2 million (Extracts from Part II of the Estimates, page 5). The difference reflects the following major offsetting items:

	$ million
• Supplementary Estimates of approximately $5.1 million for:	
- An increase in capital expenditures for the construction of a Volumetric laboratory in the Consumer Affairs Activity	1.0
- An increase in salaries and operating costs for the Assistance Program for UFFI Homeowners including 50 person-years	2.4
- An increase in salaries and operating costs related to various projects in the Corporate Affairs and the Administration Activities including 3 person-years	1.7
• A reduction in contributions required in the UFFI Activity ($26.5 million) and the Metric Commission Activity ($1.5 million)	(28.0)
• Various other items	(1.3)
Net change	(24.2)

B. Recent Performance

1. Highlights

Actual performance for 1983-84 is reported in the appropriate portions of Section II - Analysis by Activity. Following are reports on the major highlights given for 1983-84.

- The Department continued its efforts to modernize marketplace rules of the road through examination of its legal responsibilities. All preparatory work was completed relating to Bill C-29 to amend the Combines Investigation Act and to a White Paper proposing revisions to the Copyright Act, both of which were tabled in Parliament in April 1984. A previously tabled bill to amend Bankruptcy and Insolvency legislation was also reviewed in Parliament during the year (see also Section I, D.3, page 22). A Commission of Inquiry was planned to examine compulsory licensing of pharmaceuticals under the Patent Act, while other aspects of possible patent reform were also being reviewed.

- The operational goals established in the 1983-84 plan for the Consumer Affairs Activity were generally met at the Activity level and variances from the plan did not have a material effect on achievements. Improvements in management information systems, productivity, and service to the public were actively pursued. In the Electricity and Gas sub-activity, regulations pursuant to the new Act were developed which should lead to proclamation of the Act, publication of the regulations and facilitate the pursuit of accreditation with some utilities or meter manufacturers in 1984-85. Compliance rates were estimated at better than 90% for Electricity and some 80% for Gas during 1983-84. Resources for the Weights and Measures sub-activity were not increased to planned levels and thus, less inspections than projected were performed. The number of inspections was, nevertheless 8% higher in 1983-84 than in 1982-83 and the compliance level reached 80%. In the Consumer Products sub-activity, resources continued to be directed to the significant product problem areas (e.g. textile labelling and food additives and preservatives) and a program evaluation scheduled for completion in 1985 was begun. In the Product Safety sub-activity, an emphasis was placed on reducing hazards associated with domestic fires and toxic chemicals and improving the information base on accidents and injuries.

- In the Corporate Affairs Activity, efforts to maintain and where possible improve productivity continued. During the year, the Activity began a review of its resources and ability to maintain productivity and level of service. In terms of workloads, public demand for bankruptcy services was lower

than forecast due to a better economic climate. In the Corporations sub-activity, the population of federally-incorporated companies grew within planned performance, and statutory filings and information requests increased. In the Intellectual Property sub-activity, for the most part, planned performance was achieved.

Organizational restructuring and automation have enabled the Activity to partially compensate for the negative effects of substantial resource reductions combined with increasing workload volumes. Thus, level of service in certain areas has suffered, resulting in larger inventories of Patents and Trade Marks applications and in decreased surveillance activity in the Corporations and Bankruptcy sub-activities. However, efficiency improvements have been achieved thereby avoiding irremediable deterioration of service to the public.

- In the Combines Investigation and Competition Policy Activity, for enforcement areas excluding Marketing Practices, 233 preliminary investigations, 23% over target, were completed but a slippage caused by time utilized to deal with an increase of 270% (2,296 actual vs 850 estimated) in demands for service resulted in completion of 30 formal enquiries, 60% of the target. The targets for Marketing Practices were exceeded as 11,487 complaints were processed and 1,075 investigations were completed. There were 13 interventions completed in the Regulated Sector sub-activity. Court time required more resources than originally anticipated, a matter beyond the Activity's control.

- The Assistance Program for UFFI homeowners has been extended beyond the March 1984 date anticipated for closure during preparation of the 1983-84 Estimates. In addition, more homeowners than anticipated at that time will receive financial assistance. The deadline to register was extended to September 30, 1983. The 1983-84 construction season saw a larger than expected number of homeowners do corrective work and make a claim to the Program. The required budget adjustments were made to ensure that entitlements were respected.

- The Policy Coordination Bureau contributed to the Department's legislative reform priorities through development of proposals for revising the Copyright Act, the Interest Act, the Tax Rebate Discounting Act and the Canada Business Corporations Act. During 1983-84, preparations for amendments to the Interest Act and a White Paper on Copyright were substantially completed. Work on Patent Act reforms continued. To enhance the effectiveness of its communications and liaison activities, Regional Communication Advisors were placed in the

Department's five Regional Offices. In the Program Evaluation area, the evaluations of the Traded Goods and Deceptive Marketing Practices program components were begun.

- The Metric Commission began to decrease its operations as forecast prior to its phase-out at the end of 1984-85.

- In 1983-84, as part of a government-wide thrust towards improved accountability, the Department developed and received Treasury Board approval for an Operational Plan Framework. This document describes how Consumer and Corporate Affairs Canada is managed, for example, by assigning accountabilities, and stating objectives, descriptions and indicators of results. The results of this agreement were reflected in the 1984-85 Expenditure Plan.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Consumer Affairs	49,241	50,246	1,005
Corporate Affairs	23,385	23,693	308
Combines Investigation and Competition Policy	13,988	13,484	(504)
Metric Commission*	11,431	20,266	8,835
Assistance Program for Urea Formaldehyde Foam Insulation Homeowners	137,407	63,469	(73,938)
Administration	26,308	22,893	(3,415)
	261,760	194,051	(67,709)
Revenue	35,323	34,001	(1,322)
Person-years	2,649	2,514	(135)

* For detailed information on the Metric Commission Activity, please refer to the Administration Activity, Section II, page 54.

Explanation of Change: The actual expenditures were 35% or $67.7 million higher than Main Estimates levels. The difference does not take into consideration adjustments to the Main Estimates, following approval of Supplementary Estimates ($73.4 million and 148 person-years) and other adjustments, of which the major offsetting items are the following:

- In the Assistance Program for UFFI Homeowners Activity, the Treasury Board approved additional resources in Supplementary Estimates ($72.4 million and 131 person-years) and a transfer from the Metric Commission Activity ($6.0 million). Operating resources were also transferred from UFFI Activity to the other Activities, mainly in the Administration Activity for work performed by common services on UFFI's behalf.

- In the Administration Activity, operating resources were increased as a result of the transfer from the Assistance Program for UFFI Homeowners (approximately $2.3 million and 19 person-years), from Treasury Board's Vote 10 - Employment Initiatives and from other activities.

- Resources in the Metric Commission were reduced following the Treasury Board approved transfer ($6.0 million) to the Assistance Program for UFFI Homeowners as well as other transfers to different activities.

Taking into account resources authorized by the Supplementary Estimates and other transactions, the department lapsed $7.4 million and 10 person-years of which the major factors are the following:

- cancellation of projects due to the winding down of the Metric Commission Activity ($2.5 million);

- lower contract costs with full scale testing contractors and the Central Mortgage and Housing Corporation, and surplus in contributions in the Assistance Program for UFFI Homeowners Activity ($1.4 million); and

- delays in the Petroleum Inquiry, lower than expected costs for other inquiries under way and other various items in the Combines Investigation and Competition Policy Activity ($1.4 million).

Further details are provided in Section II, Analysis by Activity.

Total departmental revenues amounted to $35.3 million approximately $1.3 million higher than estimated due in large part to the collection of one fine of $1.0 million relating to a Combines Investigation case.

C. Background

1. Introduction

Consumer and Corporate Affairs Canada was created in 1967 to foster a more effective and efficient market system by bringing together in one department the diverse federal programs having control over or an effect on the Canadian marketplace and by tying together the three components of the law, the economy, and the public interest. In essence, the Department's role is to ensure that rules for marketplace behaviour are adequate and properly administered, and to redress the imbalance between producers and consumers through consumer protection and representation. The Department's mission, then, is to maintain and administer an adequate legal and institutional framework for private economic activity. In addition, the Minister, as Registrar General of Canada, issues and registers formal and official documents on behalf of the Government of Canada.

The Department's endeavours complement other federal programs, particularly Agriculture, Communications, External Affairs, National Health and Welfare, and the Department of Justice, and, because of its mandate for the legal structure of the Canadian market system, are particularly concerned with ensuring:

- the effective and efficient administration of marketplace laws and regulations;
- their appropriateness; and
- that Canadian consumers are adequately protected and their interests promoted.

2. Legal Mandate

The duties specified in the Department of Consumer and Corporate Affairs Act, RSC 1970, c. C-27 include functions relating to consumer affairs, corporations, combines and competition policy, bankruptcies and insolvency, patents, trade marks, copyrights, consumer goods standards, legal metrology, and those stemming from the responsibilities of the Registrar General of Canada. Pursuant to the Constitution Act, many of these responsibilities are under federal jurisdiction exclusively.

Under this mandate, the Department administers in whole or in part approximately 70 Acts of Parliament affecting the legal framework of the marketplace. Of that total, the Minister is mentioned in the Canada Gazette as having some or sole responsibility for over 40 Acts. Sole responsibility is assigned to the Minister for 30 Acts. A list of principal laws administered is provided in Section III - Supplementary Information, page 67. In addition, the Assistant Deputy Registrar General administers the Conflict of Interest Guidelines on behalf of the Prime Minister.

3. Program Objective

The objective of Consumer and Corporate Affairs Canada is "to promote equity, efficiency, openness and competition in Canada's market system, to promote and protect the interests of consumers, and to fulfill the functions of Registrar General of Canada".

4. Program Organization for Delivery

Activity Structure: The Consumer and Corporate Affairs Program consists of five activities, four of which are operational activities having responsibility for specific sub-objectives of the Program. The fifth activity is responsible for the Administration of the Department. These five activities are: Consumer Affairs, Corporate Affairs, Combines Investigation and Competition Policy, Assistance Program for Urea Formaldehyde Foam Insulation Homeowners and Administration. Each activity, where appropriate, is divided into sub-activities related to individual functions of the Department. All activities are organizational units. An outline of the activities and sub-activities is presented in Figure 3.

Figure 3: Activity Structure

627

Organization Structure: The headquarters of Consumer and Corporate Affairs Canada is in Ottawa-Hull. The Program is delivered through the headquarters offices and field locations in five geographic regions (see Section III, page 69).

With the exception of Administration, each activity has a head who reports directly to the Deputy Minister. The Deputy Minister, in addition to his overall departmental responsibilities, is responsible for the Administration Activity, so the heads of its components report to him. Within Administration are the central service functions of finance, administration, electronic data processing, personnel and the central government services provided by the Assistant Deputy Registrar General. In addition, the Policy Coordination Bureau headed by an Assistant Deputy Minister is responsible for departmental policy research, analysis and liaison; metric monitoring; communications; and audit and program evaluation. Together, the Deputy Minister and his immediate subordinates form the Departmental Management Committee responsible for overall departmental management and control, while a Policy Committee consisting of the Deputy Minister and the four Assistant Deputy Ministers oversees major policy development.

D. Planning Perspective and Performance Review

1. Environment

It is expected that four major factors will continue to affect the work of the Department in the medium term. The first is the changing structure of Canadian business resulting from increasing international competition in traditional markets and the impact of rapidly developing information, communications and computer technologies. An efficient market system is essential to ensure that the potential benefits of technological innovation in particular sectors are passed through to producers, consumers and workers.

A second factor is the changing consumer environment reflected by the growing complexity of products due to technological change and innovation. A changing demographic structure and new consumption patterns are coupled with consumer concerns about health and safety hazards and the desire to ensure value for goods and services purchased.

The third factor is the changing government/private sector relationship announcing less intervention and regulation and more "facilitative and framework" approaches to managing the economy accompanied by greater public participation in policy and program development. With less direct regulation of business by other government departments and agencies, there will be increasing reliance on the general legislation administered by Consumer and Corporate Affairs Canada to ensure efficient functioning of the market system. The emphasis on program review, restraint, productivity and effectiveness will continue. Workloads in general are expected to remain at current levels or to increase. The Department's capacity to further improve productivity levels is limited by such factors as the labour-intensive nature of most operations, skill shortages, and a changing work environment.

The fourth element is the changing international environment. Concern for greater protection of domestic industries by Canada's Organization for Economic Cooperation and Development (OECD) trading partners will require active participation in the resolution of trade-sensitive regulatory issues (which may be perceived as non-tariff barriers to trade) on a bilateral and multi-lateral basis. Policy and program changes in other countries, for example, those which might result from any U.S.-Canada sectoral free trade discussions, will have implications for Canada, because they can cause major shifts in trade and investment patterns.

2. New Initiatives

Laws and regulations are the major tools available to the Department to carry out its mandate of maintaining order and balance while facilitating efficient operations in the marketplace. A number of initiatives

are planned to modernize and streamline marketplace rules and to communicate effectively with those people who must work within the regulatory framework.

In the Speech from the Throne on November 5, 1984, the Government announced that in dealing with the economy it "would act as guide, mediator and catalyst, becoming less intrusive in the private sector but vigilant over the integrity of the national economy and of national standards". Its three-part strategy was "to restore fiscal responsibility, remove obstacles to growth and encourage new investment".

More specifically, the Throne Speech announced that during the first session of the Thirty-third Parliament, legislative proposals would be introduced "to improve the market environment by changes in competition laws and the regulatory framework of the financial services industry" as well as proposals "to enhance risk taking, innovation and reward among entrepreneurs, especially in the small and medium-sized business sector".

The major priorities and initiatives envisaged by Consumer and Corporate Affairs Canada in 1985-86 are as follows:

Legislative and regulatory reform: The Department will continue efforts to reform legislation and simplify regulations within the Minister's authority as part of the Government's priority to modernize marketplace rules and so facilitate economic development by promoting competitiveness, by facilitating structural change and by encouraging self-regulation. A bill to amend legislation on Competition remains the Department's top legislative priority and will be re-introduced after re-examination and consultation with the private sector. Other business-related bills involve amendments to legislation concerning Canada Business Corporations as well as Bankruptcy and Insolvency, and a review of proposals for federal securities markets regulation. In the area of Intellectual Property and the encouragement of innovation, legislative priorities include bills amending legislation relating to Patents and Copyright. Two areas requiring attention under patent legislation are the patentability of biotechnology and compulsory licensing of pharmaceuticals. In terms of consumer rights and consumer protection, the legislative priorities include amendments to the Hazardous Products and Tax Rebate Discounting Acts and a review of proposals for amendments to the Interest Act.

Regulatory review is a part of the Department's plans. In 1985-86, it is expected that regulations administered under the responsibility of the Consumer Products (formerly called Consumer Fraud Protection) sub-activity will have been completely reviewed. In the same year, it is expected that initial assessment studies will be completed on Marketing Practices including Consumer Products inspection policies and practices, Patents and Bankruptcy. In a broader context, the Combines Investigation and Competition Policy Activity will focus on regulatory reform of financial service industries (including banking, trust, insurance and

securities companies), a sector that is highly regulated by a diverse array of federal and provincial bodies and legislation. New technologies and increasing internationalization of the world's capital markets are rendering obsolete many of the existing legislative and regulatory approaches of the federal and provincial governments. The Activity is working to ensure that the reformed laws and regulations provide a consistent national framework in which market forces can significantly improve the effectiveness of Canada's financial markets.

Encouraging the development and adoption of new technology: This priority will be met through revision of specific provisions of the Patents Act and regulations, so as to facilitate the availability of information regarding existing technologies. Apart from the compulsory licensing of pharmaceuticals and the patentability of biotechnology, both mentioned before, other areas requiring attention are the development of a fee structure comparable to those in other developed countries and the role of the Patent Office in providing technological information to the business community. In 1985-86, it is proposed to offer the expertise of patent examiners, using modern data base and search systems, to help small and medium size businesses obtain and use patent information. Promotional activities will be continued to inform business and research groups of the value of patent information and the availability of the service.

Enhancing the effectiveness of the consumer protection role: The Department intends to continue liaison and consultation with other departments, provincial governments, the private sector, and voluntary sector organizations representing consumer interests. In operations, it will continue encouraging voluntary compliance with consumer protection laws, as well as making representations in areas where significant problems are detected.

Improving management practices and reducing net costs: By the end of 1984-85, the Metric Commission Canada will have been closed. By the end of 1985-86, it is expected that the UFFI Assistance Program will be largely completed. The result will be a considerable reduction in the levels of future departmental estimates. In the same period, departmental fee schedules will be reviewed. In line with its user-pay policy, the Department will adjust its schedules to realistic levels for the services provided. Examples are patents, trade marks, corporations, bankruptcy and legal metrology fees.

In addition to this continued emphasis on economy, in 1985-86 it is expected that an internal task force on Informatics will have completed a review of office automation intended to provide the basis for future departmental directions.

3. Update on Previously Reported Initiatives

In the 1983-84 Department Expenditure Plan, three initiatives were identified. The first initiative involved communications. Communications officers were placed in the five regional offices as planned. Through initiatives from both the Consumer Affairs Activity and the Combines Investigation and Competition Policy Activity, business was and continues to be encouraged to respond more positively to the concerns of the general public, consumers, and the business community itself. A pilot project on toll-free telephone service was begun as planned and it is expected that it will be completed in 1985-86, at which time results will be assessed.

In addition, as part of a government-wide initiative, in 1983-84 the Department began announcing its ideas concerning its legislation as well as ongoing regulations through a Regulatory Agenda published every six months as a Special Supplement to the Canada Gazette, Part I. The intentions announced in the Regulatory Agenda have a time horizon of up to two years and are to elicit public comment and response.

A second announced initiative concerned Competition Policy. A bill to amend the Combines Investigation Act was reviewed as planned in terms of its compatibility with the Government's economic recovery program. The major thrusts of the proposed amendments were: to strengthen current legislation on mergers and conspiracies in restraint of trade; to include powers related to abuse of dominant market position; and to provide for Specialization Agreement exemptions. The amendment process continues to be characterized by extensive and positive consultation with the business sector and legal community. In early April 1984, Bill C-29 to amend the Combines Investigation Act was introduced in the House of Commons, but was not passed prior to dissolution of Parliament. Re-introduction of the bill was a stated priority in the Speech from the Throne, November 5, 1984.

A third specific initiative announced for 1983-84 was the introduction of a bill to overhaul and upgrade the Copyright Act. The Government decided subsequently that more discussions would be necessary and thus, instead of a bill, decided to prepare and table a White Paper. The White Paper was tabled in the House of Commons in April 1984 and the Department is reviewing responses from interested parties with a view to proposing legislative revisions in 1985-86.

Results of more specific plans are provided in the appropriate areas of Section II - Analysis by Activity.

4. Program Effectiveness

As stated earlier, the Consumer and Corporate Affairs Program comprises five activities. Because of the diversity of their operations, each of these activities is in many respects analogous to a separate and individually evaluated program. Accordingly, effectiveness measures for each activity are presented as appropriate in Section II, Analysis by Activity. These indicators address, among other factors, the ability to satisfy statutory obligations.

Evaluation of effectiveness by program component is performed by a Program Evaluation Division following a cyclical seven year plan. In 1983-84, a detailed study led to revisions in the Metric Commission's objectives and priorities and to its phase-out in 1984-85. It is expected that an evaluation of the Consumer Products (Traded Goods) sub-activity will be completed in 1985-86. In 1985-86 as well, the initial phase of an evaluation (known as an Assessment Study) will be conducted in the areas of Marketing Practices, Patents and Bankruptcy. As program evaluations over the planned cycle are completed, they should provide indications of broad program effectiveness of the Department.

Section II
Analysis by Activity

A. Consumer Affairs

Objective

To establish and enforce rules and promote policies to protect, inform, assist and represent consumers, and to maintain equity in market transactions based on measurement.

Resource Summary

The Consumer Affairs Activity accounts for about 29% of the Department's 1985-86 budget. Personnel costs make up approximately 72% of the activity total.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Consumer Services	**5,923**	**88**	5,859	87	5,466	86
Consumer Products	**12,064**	**275**	11,983	275	11,322	271
Product Safety	**4,813**	**89**	4,897	89	4,176	89
Weights and Measures	**15,173**	**335**	15,410	334	12,656	304
Electricity and Gas	**8,295**	**193**	8,388	194	8,077	203
Administration	**3,870**	**91**	3,515	86	4,258	91
Operations	**5,456**	**-**	4,009	-	3,286	-
	55,594	**1,071**	54,061	1,065	49,241	1,044
Revenue	**3,700**		2,600		2,377	

Revenues are not available to the Department as offsets against expenditures. For more details on revenue, see Section III, Supplementary Information, page 66.

Description

Most of Consumer Affairs human resources are located in five regional offices and in field locations across the country (see Section III, page 69).

Consumer Affairs is responsible for initiating or undertaking programs designed to promote the interests of the consumer; promoting and encouraging practices which will improve consumer protection and cooperating with others having similar objectives; assisting the consumer to be informed about goods and services; and providing a framework for the accurate measurement and equitable conduct of trade based on measure. Services are provided under a number of Acts of Parliament (see Section III, page 67).

The Consumer Affairs Activity is organized into five operational sub-activities:

Consumer Services: supports the consumer interest in the implementation and administration of government programs; strengthens the consumer's role in the marketplace by encouraging consumers to organize for collective action and self-help and by encouraging increased awareness of and responsiveness to consumer concerns by business; and ensures that the marketplace adequately serves vulnerable consumers. It administers the Tax Rebate Discounting Act and provides financial and non-financial support to consumer interest groups.

Consumer Products: is responsible for the enforcement of legislation and the administration of voluntary programs to ensure adequate product information is available to facilitate effective consumer choice and to prevent product misrepresentation in the marketplace. Through inspection, trader education and other compliance activities, it aims to detect and prevent fraud and deception in the packaging, labelling, quantity, quality, composition and advertising of a wide range of food and non-food products.

Product Safety: is responsible for the enforcement of legislation and the administration of voluntary programs to protect against hazardous products in the marketplace. Supported by field inspection and compliance activities, it identifies hazards in consumer products, regulates where necessary, and ensures that dangerous products are removed from the marketplace.

Weights and Measures: establishes specifications and examines and approves weighing and measuring devices used in trade, calibrates and certifies measurement standards, certifies test equipment used by industry and government, verifies, through a field inspection program, the accuracy and appropriate usage of all weighing and measuring devices used in trade, verifies the net quantity of commodities sold on the basis of measure and defines units of measurement to be used in trade.

Electricity and Gas: determines units and enforces standards of measurement, establishes specifications for, and approves energy metering devices used in trade, calibrates and certifies measurement standards, verifies meters and ancilliary equipment to ensure accuracy and investigates and arbitrates disputes between buyers and sellers of electricity and gas.

These operational sub-activities are supported by administrative personnel both at headquarters and in the regions:

Administration: includes the Office of the Assistant Deputy Minister, a Management Services Branch, Regional Directors, and Regional Finance, Administration and Personnel units.

Operations: is a centrally controlled budget for capital equipment, legal fees and some materiel for field offices.

Past Financial Performance

Figure 6 shows past financial performance. Operational performance is included in the next sub-section, Performance Information/Resource Justification.

Figure 6: 1983-84 Financial Performance ($000) and Person-Years

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Consumer Services	5,466	86	5,478	88	12	2
Consumer Products	11,322	271	11,759	278	437	7
Product Safety	4,176	89	4,194	90	18	1
Weights & Measures	12,656	304	13,453	325	797	21
Electricity & Gas	8,077	203	7,876	200	(201)	(3)
Administration	4,258	91	4,076	90	(182)	(1)
Operations	3,286	-	3,410	-	124	-
	49,241	1,044	50,246	1,071	1,005	27
Revenue	2,377		4,496		2,119	

With the exception of resources transferred to other Activities within the Department subsequent to the preparation of the 1983-84 Main Estimates (24 person-years and approximately $1,000,000), the Consumer Affairs Activity spent almost its entire budget in 1983-84.

Two factors contributed to less revenue being generated than projected. First, significant planned increases in Electricity and Gas fees did not take place as a result of limits on such increases being imposed by government policy. Secondly, the general economic slowdown resulted in less meters than projected entering the marketplace.

Performance Information/Resource Justification

Most of the work of Consumer Affairs involves the development and enforcement of regulations under various statutes which deal with accuracy of measurement and equity in trade based on measure, and the safety, quality, quantity and labelling of consumer products (see Figure 7). Enforcement is carried out through an inspection program supported by laboratory testing facilities. Consumer Services, with the exception of the Tax Rebate Discounting Act, takes a non-legislative approach to improving the consumer's standing in the marketplace.

Figure 7: Resource Allocation

Outputs and costs: In three of the sub-activities (Consumer Products, Electricity and Gas, and Weights and Measures), a major part of the work involves the inspection of a wide range of products at various trade levels as well as the inspection, verification and certification of weighing, measuring and metering devices and standards. Effectiveness is assessed as compliance with applicable legislation and the maintenance or reduction of consumer and trader loss. Consumer complaints are also used to identify areas where effectiveness can be enhanced.

The type of inspection performed differs significantly from one sub-activity to the other and results in the diverse "costs per inspection" which are used here to illustrate the relationship between outputs and resources. In addition, unit cost is an aggregate figure representing a wide range of various types of inspections within each sub-activity. For example, domestic gas meters are included with high capacity/high pressure commercial gas meters, and grocery store retail

scales with heavy duty truck scales. In Consumer Products, the inspection of retail, manufacturing and importing establishments involves a very broad range of consumer goods. Thus, unit costs vary considerably between sub-activities depending upon the complexity of inspections, the mixture of devices, meters, products and establishments involved, and priorities (e.g. if priority is given to the verification of complex devices and meters where the greatest potential for inequities exists, the unit cost of inspection will increase).

Figure 8: Outputs and Cost

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
Item	No. (000)	Unit Cost $	No. (000)	Unit Cost $	No. (000)	Unit Cost $
Consumer Products Establishment Inspections	39	180	39	179	41	160
Electricity & Gas Meter Inspections	1,900	2	2,100	2	2,000	2
Weights & Measures Device Inspections	310	24	295	26	270	21

The average "unit costs" for various inspections are expected to increase over the planning period as inspection resources are focused on more complex, thus costly and time consuming, inspections. In order to cope with new products entering the marketplace and changes in measurement technology, the Activity will be investing in new equipment and testing facilities. Salary increases in an organization where these account for more than 70% of costs will also contribute to increases in the aggregate "unit costs".

Consumer Products will direct its inspection resources to major non-complying areas (products and establishments) and carry out some 40,000 inspections per year. The sub-activity plans to increase the inspection of products at higher trade levels (thus more complex and time-consuming inspections). This will result in a decrease in the actual number of establishments inspected, but should lead to improved program effectiveness.

Electricity and Gas inspection projections were originally based on the anticipated implementation of the accreditation provisions of the new Electricity and Gas Inspection Act. Original assumptions made relative to accreditation have been modified in light of economic and other environmental changes. Many utilities and some manufacturers are

less interested in accreditation than earlier anticipated. Inspection projections (verifications) have been adjusted accordingly for the planning period.

In Weights and Measures, the sub-activity plans to increase the number of inspections performed by 15% in 1985-86 over 1983-84.

Product Safety will continue to identify product hazards, set standards or promote voluntary programs to eliminate these and ensure compliance in the marketplace with existing standards. During 1983-84, Product Safety conducted research into ignition sources and emissions of toxic gases during the combustion of domestic furniture and further work will continue into 1985-86 which could result in regulatory actions. Product Safety also began to play a lead role in the coordinated research, by several government departments and agencies into toxic chemicals, research which will also extend into 1985-86.

Consumer Services manages the administration of the Tax Rebate Discounting Act, handles complaints and enquiries on consumer matters (Consumer Services handled more than 200,000 complaints and enquiries during the 1983-84 year), and carries out projects aimed at strengthening the consumer movement, encouraging marketplace actions to assist vulnerable consumers, and increasing the responsiveness of business and government to consumer needs. As a result of projects undertaken in cooperation with business in 1983-84, effective complaint handling mechanisms have become more widely established among Canadian retailers and manufacturers. Efforts in that direction will continue in 1985-86 and will be expanded to include the encouragement of other customer relations programs. In addition, systematic mechanisms designed for more effective liaison among consumer-related government activities will be put in place, and initiatives to facilitate the resolution of consumer problems among elderly, disabled and young Canadians by the public, private and voluntary sectors will be expanded.

Consumer Services also administers a grants and contributions program in the amount of $1.8 million awarded to consumer organizations. A new approach to funding, centered on the identification and resolution of consumer issues will be pursued in 1985-86.

Effectiveness: A key measure of effectiveness for three of the sub-activities is assessed as compliance rates, i.e. the percentage of products, meters and devices on the market which are found to meet the requirements of applicable legislation. Data for Consumer Products are not currently available. A Management Information System (MIS) is being implemented which will provide reliable data starting in 1986-87. Electricity and Gas compliance rates are based on partial data and, here too, an MIS will be developed during the upcoming years.

Figure 9: Compliance Rates

The compliance rate indicators are very highly aggregated and will fluctuate according to a number of factors. The level of aggregation provided here is such that the indicators are biased in favour of the larger proportion of the device and meter population which is relatively simple and where compliance is relatively high. The indicators thus do not reflect particular problem areas and lower levels of compliance in such areas as metering installations and complex meters.

In the case of Consumer Products and Electricity and Gas, some reconciliation has been made of compliance and the potential for economic loss. In 1983-84, the dollars at risk (an indexed measure of the economic impact of violations under consumer legislation) in the purchase of food and non-food products was estimated to be $1.4 billion.

It is estimated from known cases that $750 million of inequities exist due to the inaccurate measurement of electricity and gas. Improved compliance rates will reduce dollars at risk, given constant consumption.

Weights and Measures expects to significantly improve compliance rates as a result of increasing its resource base.

Changes to the method of calculating compliance for Electricity and Gas are being considered to provide more accurate information on the marketplace and these could result in a realignment of compliance projections in future.

For Product Safety, effectiveness is defined as reduction in injury, illness and death due to hazardous products. Thirty-five consumer product areas are banned and 36 are regulated under the Hazardous Products Act. Comprehensive historical data on product-related accidents and injuries have not existed for most product areas. An accident-injury reporting system is being used to assist in risk assessment and the establishment of priorities.

Coverage: Priorities will continue to reflect the need for adequate coverage of the marketplace that is, inspection of the greatest proportion possible of the device and meter population.

Figure 10: Coverage

Weights and Measures' workload is determined by the mandatory initial inspection of new devices for use in trade and by the frequency of inspection of in-service devices required to achieve acceptable levels of compliance. Coverage represents that proportion of the known device population which will be inspected with available resources. Estimates indicate that more than 600,000 weighing and measuring devices are currently being used in trade in Canada. Efforts are underway to determine the accuracy of that number. Based on this estimate, Weights and Measures plans to inspect some 90% of the device population on a two-year cycle by the end of 1985-86.

For Electricity and Gas, the majority of inspection work is mandatory under law. Most of the workload is determined by the number of new meters entering the marketplace and the number of in-service meters due for re-verification. The frequency of re-verification of in-service meters is legislated. Coverage represents that proportion of the meter population due for verification and re-verification which will be inspected with available resources. That proportion is expected to exceed 95% over each year of the planning period.

In Consumer Products, the number of planned inspections is based on an assessment of identified problems and of the resources required to correct these problems.

B. Corporate Affairs

Objective

To provide an institutional framework for the orderly conduct of business, the accumulation of capital, and the protection and promotion of intellectual and industrial property in Canada.

Resource Summary

The Corporate Affairs Activity accounts for approximately 14% of the Department's 1985-86 budget. Personnel costs make up approximately 85% of the activity total.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Bankruptcy	7,214	143	6,384	143	6,069	146
Corporations	2,381	59	2,505	56	2,328	63
Intellectual Property						
Patents	12,618	271	11,537	264	10,841	266
Trade Marks	3,322	84	3,612	82	2,880	99
Copyright and Industrial Design	553	14	536	15	536	15
Administration	604	11	559	11	731	10
	26,692	582	25,133	571	23,385	599

Figure 12: Revenue ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Bankruptcy	3,750	1,375	1,787
Corporations	17,650	8,250	7,804
Intellectual Property			
Patents	25,426	12,984	13,968
Trade Marks	16,802	4,432	4,541
Copyright and Industrial Design	1,380	617	705
	65,008	27,658	28,805

Revenues are not available to the Department as offsets against expenditures. For more details on revenue, see Section III, Supplementary Information, page 66.

Description

The Corporate Affairs Activity comprises four sub-activities: Bankruptcy, Corporations, Intellectual Property and Administration. The Intellectual Property Directorate comprises the Patent Office, the Trade Marks Office and the Copyright and Industrial Design Office.

Eighty per cent of Corporate Affairs' personnel are located at headquarters; Bankruptcy services are provided in 15 locations across Canada (see Section III, page 69).

Bankruptcy: supervises the administration of bankruptcy in Canada, with particular emphasis on ensuring accessibility of service to debtors, monitoring the quality of estate administration by private sector trustees and detecting offences committed as part of insolvency proceedings. The Superintendent of Bankruptcy is responsible for maintenance of Trust Funds related to bankruptcies (see Section III, page 70).

Corporations: is primarily responsible for the incorporation of federal corporations, surveillance of their adherence to the law, and providing public access to corporate information.

Intellectual Property: is responsible for granting equitable exclusive intellectual and industrial property rights, and ensuring that information acquired in exchange for such rights is made available to promote exploitation of innovative technologies in Canada.

Administration: is responsible for overall coordination and administration of the Activity while each of the other sub-activities is charged with the responsibility of administering one or more statutes.

Past Financial Performance

Figure 13 shows past financial performance. Operational performance is included in the next sub-section, Performance Information/Resource Justification.

Figure 13: 1983-84 Financial Performance ($000) and Person-Years

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Bankruptcy	6,069	146	6,360	146	291	-
Corporations	2,328	63	2,120	56	(208)	(7)
Intellectual Property						
Patents	10,841	266	12,878	320	2,037	54
Trade Marks	2,880	99	1,295	32	(1,585)	(67)
Copyright and Industrial Design	536	15	489	15	(47)	-
Administration	731	10	551	11	(180)	1
	23,385	599	23,693	580	308	(19)

The variance in figure 13 between Patents and Trade Marks reflects an internal reorganization. To increase efficiency, the processing functions of these two sub-activities have been consolidated under Patents and were reflected this way in the 1983-84 Estimates. However, in order to produce a more accurate display of activity costs, actual expenditures for Trade Marks processing have been shown against Trade Marks rather than Patents.

The variance in total person-years was totally offset by transfers from other departmental activities required to complete and perfect the electronic trade mark registry.

Figure 14: 1983-84 Revenue ($000)

	1983-84		
	Actual	Main Estimates	Change
Bankruptcy	1,787	1,800	13
Corporations	7,804	6,800	(1,004)
Intellectual Property			
Patents	13,968	15,275	1,307
Trade Marks	4,541	4,010	(531)
Copyright and Industrial Design	705	520	(185)
	28,805	28,405	(400)

The variance in figure 14 for revenues is due to higher volumes in revenue-based operations.

Performance Information/Resource Justification

Since all Activity operations involve the enforcement of legislation, resource requirements are contingent upon workloads which are dependent on public demand for services explicitly dictated by statutes, with due account for appropriate levels of service. Because of the heterogeneous nature of such services, a meaningful linkage of results to resources can only be made at the sub-activity level and is hereafter presented for each of Bankruptcy, Corporations and Intellectual Property. Since the 1983-84 Estimates, an operational plan framework has been developed and the performance reported herein is based on these indicators.

Bankruptcy: Bankruptcy's objective is to restore to more productive use those resources which have been locked up in an unsolvent business, to ensure the fair and equitable treatment of debtors and creditors, and to prevent fraud in insolvent estate administration.

The mandatory workload of the Superintendent of Bankruptcy includes the licensing of trustees, the supervision of the administration of insolvencies by those trustees and the registration and public disclosure of bankruptcy proceedings. Because the administration of the Act relies heavily on the private sector working under the supervision of the Superintendent of Bankruptcy, the achievement of program objectives necessitates the ongoing development of policy and guidelines as well as the conduct of monitoring, audits and investigations to ensure compliance and the overall reliability of the bankruptcy system.

Figure 15 shows the workload performance and forecasts for bankruptcy proceedings and investigations.

Figure 15: Bankruptcy Statistics on Mandatory Workload Demands

The graphs demonstrate Activity efforts to maintain the number of investigations reasonably proportional to total proceedings with the same amount of resources.

Public demand for bankruptcy services has declined in the past year and is expected to stabilize and return to more normal growth patterns than have been experienced since 1981-82. Increases in bankruptcy proceedings over the last five years coupled with a 38% decrease in resources in the same period have combined to increase the caseload per employee by 204% since 1978-79. The unit cost reduction is due to an even greater decline in resources available for the investigation function.

Despite efficiency measures implemented during those years, the departmental ability to fulfill its statutory duties in such functions as examination of bankrupts, meetings of creditors, and estate reviews has fallen to only about 13% of requirements.

Corporations: The objective of the Corporations sub-activity is to regulate the creation and existence of federal corporations and maintain order and fairness in the corporate environment. In order to do so, the Corporations sub-activity through its corporate services division, must certify articles of incorporation or amendment, process statutory filings and provide information on corporate status and performance. The sub-activity must also rule on exemptions from statutory requirements and, undertake enforcement and investigations actions subject to availability of resources. Volumes, unit costs and a key indicator of turnaround time for corporate services of activities are shown in figure 16.

Figure 16: Corporations Statistics on Mandatory Workload Demands

Figure 16: Corporations Statistics on Mandatory Workload Demands (Continued)

Figure 16 illustrates how the Branch expects to maintain efficiency at an acceptable level despite increasing workload. This will be achieved through automation and at the expense of level of service in article processing and information dissemination where reply time will continue to increase, enforcement where surveillance will be limited and investigations where activity will be strictly reactive.

The growth in the population of federally-incorporated companies, which was within expectations, combined with the effect of the dissolution program, accounts for the statutory filing increases. The increase in information dissemination was largely due to automation of Corporate records.

In the Enforcement and Investigation operations to which approximately 17% of resources are devoted, 128 cases were referred to court for failure of companies to file statutory documents. Automation accounts for an increase of 79% in follow-up actions directed towards companies in default. Three hundred and ninety-eight exemption requests were ruled on, an increase of 17% over the plan. However, turnaround time to process a request has suffered as a result of these volume increases. Thirty-one investigation requests were worked on during the last fiscal year.

Intellectual Property: To achieve its objective of granting equitable, exclusive intellectual and industrial property rights and facilitating technological information dissemination, the Intellectual Property Directorate must examine, grant or reject patent, trade mark, copyright and industrial design applications.

Figure 17 demonstrates volume, unit cost and a key indicator of inventory in the sub-activity. Increasing inventories, when applications exceed disposals, means that total elapsed time to handle applications are increasing.

Figure 17: Intellectual Property Statistics on Mandatory Workload Demands: Patents and Trade Marks

The redeployment of resources to the provision of technology information and technology searches, and anticipated lower productivity associated with the recruitement and training of new examiners to replace retiring examiners will, during 1985-86, result in a 15% decline in the number of Patent disposals when compared to 1983-84 and an increase in the unit costs and inventories in Patents and Trade Marks.

Figure 18: Intellectual Property Statistics on Mandatory Workload Demands: Copyright and Industrial Design

Figure 18 illustrates that a 17% improvement over 1983-84 performance is anticipated for disposals and unit cost in Industrial Design.

Industrial Design's disposal volume was down because of lower productivity associated with less staff on strength; Copyright's disposal cost was higher due to legal fees associated with infringement cases.

C. Combines Investigation and Competition Policy

Objective

To establish and enforce rules governing, and to promote policies improving the efficient and equitable functioning of a competitive and dynamic market economy.

Resource Summary

The Activity accounts for approximately 8% of the Department's 1985-86 budget. The largest item of expenditure is personnel costs, representing some 78% of the Activity's budget; the second-largest expenditure is for legal fees and costs relating to formal inquiries under the Act, some 14% of the budget.

Figure 19: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Restraints to Competition	6,033	113	5,846	115	5,863	123
Marketing Practices	3,986	80	4,091	81	2,903	66
Regulated Sector	1,679	27	1,272	21	1,093	17
Economic Analysis and Policy Evaluation	980	18	921	17	596	13
Administration	2,975	26	3,126	27	3,533	27
	15,653	264	15,256	261	13,988	246
Revenue	1,000		1,000		2,380	

Revenues are not available to the Department as offsets against expenditures. For more details on revenue, see Section III, Supplementary Information, page 66.

Description

There are two principal areas of focus: the administration of the provisions of the Combines Investigation Act; and the promotion of competition policy considerations in the development and implementation of economic policy. In effect, the Activity is an economic guardian, seeking to maintain a marketplace that is honest, fair, efficient and competitive.

In addition, the Activity promotes public understanding of the content and scope of the Act and of the economic and social significance of an effective competition policy, and represents Canada's interest in international competition policy issues.

The chief executive officer of the Activity is the Director of Investigation and Research, who reports to Parliament through the Minister. The incumbent is also the Assistant Deputy Minister, Competition Policy, responsible to the Deputy Minister for the resources of the Activity.

The Activity's work includes five areas of emphasis, with principal responsibilities as follows:

Restraints to Competition: involves the administration of the criminal provisions of the Act relating to conspiracy, merger, monopoly, price maintenance and other pricing practices; and the non-criminal provisions relating to matters reviewable by the Restrictive Trade Practices Commission, such as consignment selling, market restriction and tied selling.

Marketing Practices: involves the administration of the provisions of the Act relating to misleading advertising and deceptive marketing practices.

Regulated Sector: involves the representations to boards, commissions and other tribunals on issues relating to economic efficiency and competition in regulated industries.

Economic Analysis and Policy Evaluation: involves development of enforcement policy and economic analysis of competition policy issues in support of the Bureau's policy and enforcement activities; participation in the development of federal economic policy; advice to the Minister on competition policy issues and support to the development of competition-related legislation; representation of Canadian interests relating to competition and trade issues in international forums.

Administration: includes general management, planning and reporting, coordination and central support services and supports amendments to the Combines Investigation Act.

Most Activity personnel are located at headquarters; Marketing Practices maintains 14 offices across the country where more than 70% of this sub-activity's personnel are located (see section III, page 69).

In mid 1984, a pilot project was undertaken to assess the feasibility and benefits of locating staff of the Restraints to Competition sub-activity in the field.

Past Financial Performance

Figure 20 shows past financial performance. Operational performance is included in the next sub-section, Performance Information/Resource Justification.

Figure 20: 1983-84 Financial Performance ($000) and Person-Years

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Restraints to Competition	5,863	123	6,056	117	193	(6)
Marketing Practices	2,903	66	2,889	64	(14)	(2)
Regulated Sector	1,093	17	974	16	(119)	(1)
Economic Analysis and Policy Evaluation	596	13	762	14	166	1
Administration	3,533	27	2,803	30	(730)	3
	13,988	246	13,484	241	(504)	(5)
Revenue	2,380		1,000		(1,380)	

Subsequent to the preparation of the 1983-84 Main Estimates, additional resources were provided through Supplementary Estimates ($862,000 and 14 person-years) for legal fees, misleading advertising and deceptive marketing practices and through internal transfers ($998,000 and a net reduction of 7 person-years). The net lapse amounted to $1.4 million and 2 person-years due mainly to delays in the Petroleum Inquiry and in proceeding with cases held in abeyance pending court decisions relating to the Charter of Rights.

Performance Information/Resource Justification

Demands for Service are mandatory external requirements for the Activity upon which action must be taken. Included are:

Requests for Information: about the scope and coverage of the Act, including contacts by the media and requests for official documents and legal papers from the public, business community and legal profession.

Compliance Requests: from the legal and business communities, that the Activity review a proposed business action and to provide a non-binding opinion as to whether the provisions of the Act would/might be contravened.

FIRA Reviews: are the analysis of proposed merger/takeover proposals submitted to Investment Canada, formerly the Foreign Investment Review Agency, and advice to the Agency about the competitive implications of the proposal.

Education Requests: from the business community, consumer groups and others for speeches/presentations of an educational nature.

Complaints: which are allegations (primarily from the business sector) that the provisions of the Act may have been contravened.

The principal function of the Activity is the enforcement of the Act. Most enforcement actions stem from complaints. A Preliminary Study is undertaken when complaints are received. If there is substantive indication that the Act may have been contravened, a Preliminary Investigation is initiated, in which there are fact-finding discussions with the complainant and others who may be involved with the matter, to define the situation in more detail. Where this investigation indicates that no further action is possible or appropriate, the matter is closed. Where there is confirmation that an offence may have occurred, a Formal Inquiry is initiated. This may involve searches of company premises, interviews or formal hearings, and extensive economic analysis of the issues, with a view to determining whether a prosecution may be warranted. In addition, a Preliminary Investigation and Formal Inquiry may be commenced for civil matters which indicate a possible need for Restrictive Trade Practices Commission to issue an order directing a company or person to undertake or not commence specified action.

On completion of an Inquiry, the case may be discontinued (closed) or, pursuant to the requirements of the Act, it may be referred to the Attorney General or Commission for such action as may be deemed appropriate. Subsequent legal proceedings are then supported by Activity staff, subject to schedules and other requirements of the Attorney General, the Commission and the courts.

For the above components, statistics and performance indicators are presented separately for the Marketing Practices sub-activity. The separation is made due to the considerable difference in the number of matters dealt with by the two groups, which would make aggregation meaningless, and also to reflect the different nature of matters handled. In Marketing Practices, cases tend to be comparatively short in duration (usually being closed/referred to the Attorney General in less than a year). In the rest of the Activity, cases frequently take several years to complete.

The second major work element, the intervention, is the preparation of submissions and evidence to regulatory bodies. While the Act specifically authorizes the Activity to participate in federal processes, there is also a significant need (and growing number of requests) to participate in provincial and municipal proceedings. Some interventions start as a result of complaints received, however most are initiated by the Activity. Also recorded as part of the intervention element are matters which the Activity keeps under observation and study, subsequent to its participation in a specific process: this includes monitoring the effects of regulatory decisions on the state of competition in the

marketplace and maintaining awareness of the overall regulatory process. In some cases, the intervention process leads to participation in the review of regulation at the federal and provincial levels.

Completed matters are presented for Interventions but the total possible workload is not, since areas for intervention far exceed the capacity of the Activity to participate.

Workload and performance information for the Economic Analysis and Policy Evaluation, and Administration sub-activities are not presented. Workload includes economic analysis and policy development, which is dependent on factors outside the control of the Activity and cannot be reasonably forecast; support to the other operations of the Activity (with no outputs comparable to those other operations); and the preparation and coordination of briefings on policy issues for senior executives of the Department.

Figure 21 shows the demands for service that have been and are forecast to be made on the Activity; all such demands are dealt with on receipt. These are not planned discretionary outputs of the Activity. Any increase in demand directly affects the resources available for other work.

Figure 21: Demands for Service: Workload

Activity excluding Marketing Practices				Marketing Practices		
Estimates 1985-86	Forecast 1984-85	Actual 1983-84		Estimates 1985-86	Forecast 1984-85	Actual 1983-84
900	950	1,182	Requests for information	15,600	15,300	18,021
175	150	120	Compliance Requests	1,025	1,000	1,048
970	960	994	FIRA Reviews*	-	-	-
-	-	-	Education Requests	255	245	202
900	850	839	Complaints	13,900	13,225	11,054
2,945	2,910	3,135	Total	30,780	29,770	30,325

* review of proposals submitted to Investment Canada, formerly the Foreign Investment Review Agency.

During 1983-84 in excess of 400 requests for information were processed relating to the now-completed Petroleum Inquiry; hence the downward projection for future years. The Marketing Practices sub-activity requests for information fluctuates from year to year.

Complaints are the primary stimulus to preliminary investigative/enforcement activities. There is a direct linkage between the volume of incoming complaints and the consequent workload of Investigations and Inquiries. Figures 22 and 23 present workload impact data.

Figure 22: Complaint Workload Impact - Activity Excluding Marketing Practices

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Complaints	900	850	839
Preliminary Studies	677	654	631
Complaints of Substance	215	210	205
Preliminary Investigations Commenced	289	276	223

Figure 23: Complaint Workload Impact - Marketing Practices

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Complaints	13,900	13,225	11,054
Complaints of Substance	8,340	7,935	6,644
Complaints of Substance Closed/No Enforcement Action	4,000	3,500	4,205

The decrease in the forecast number of complaints of substance which must be closed without enforcement action is due to the addition of enforcement resources to the Marketing Practices function.

Figure 24 shows projected and actual outputs of the Activity.

Figure 24: Completions

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Preliminary Investigations Marketing Practices	3,304	2,879	2,077
Formals Marketing Practices	195	195	144

The increase in projections for interventions follows an internal reallocation of resources to the Regulated Sector sub-activity because of the critical importance of developments within the Canadian regulatory framework. During 1983-84, there were a number of delays in proceeding with formal cases, pending court decisions related to the Charter of Rights; as the issues are resolved, activity will increase.

Marketing Practices sub-activity also completes in excess of 1,000 Information Visits annually. This work element originates as a preliminary investigation; however, a decision is made not to proceed to a prosecution, but rather to inform the business person of the infraction and request voluntary compliance with the Act. This decision is made when proceeding with the case would not benefit the marketplace and would place undue hardship on the company.

The data presented in Figures 21 to 24, reflects the multifaceted approach of the Activity to contributing to an efficient and effective national marketplace through the application of competition policy. The Program of Compliance, whether responding to a specific request from the business community for guidance or resolving an individual complaint, stimulates compliance with the provisions of the Act without the need for enforcement action and reduces the negative impact of competition law on, in particular, smaller businesses. The intervention process contributes to the development of an effective regulatory environment, and in specific issues often leads to enhanced competition within an industry, fewer barriers to entry, and stimulation of technological development and investment. Enforcement of the Act is undertaken where there has been significant detriment, such that businesses have been disadvantaged and cannot compete fairly in the marketplace if a particular situation or practice is allowed to continue.

Figure 25, a key performance indicator, shows the completion rate for formal inquiries and Marketing Practices investigations. For formal inquiries, this figure shows the ratio, expressed as a percentage, of formal inquiries closed during the year compared to the total number of formal inquiries open during the year (i.e. inventory at start of year

plus new formal inquiries initiated). For the Marketing Practices investigations, this figure shows the ratio, also expressed as a percentage, of total cases completed compared to total complaints of substance received. It must be emphasized that these two measures are different, and cannot be directly compared.

Figure 25: Completion Rates

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Activity (excluding Marketing Practices) Formal Inquiries	40%	40%	46%
Marketing Practices Investigations	45%	45%	42%

The increased completion rate in Marketing Practices in 1983-84 and 1984-85 is again due to the addition of enforcement resources to the Marketing Practices function.

As already noted, completed formal inquiries may be discontinued, or referred to the Attorney General or the Restrictive Trade Practices Commission (RTPC) for further consideration and action. Figure 26 presents data in the number of cases so referred.

Figure 26: Referrals

Activity excluding Marketing Practices				Marketing Practices		
Estimates 1985-86	Forecast 1984-85	Actual 1983-84		Estimates 1985-86	Forecast 1984-85	Actual 1983-84
25	25	20	Referrals to Justice/RTPC	195	195	144

Figure 27, a second key performance indicator, presents the ratio of total cases referred to the Attorney General for possible prosecution or to RTPC for further action, compared to total completed investigations of a formal nature.

Figure 27: Referral Rates, Formal Inquiries and Marketing Practices Investigations

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Activity (excluding Marketing Practices)	50%	53%	46%
Marketing Practices	70%	70%	108%

The Referral Rate of over 100% for Marketing Practices was caused by the completion, quite late in 1982-83, of an unusually large number of Investigations. Internal review processes, implemented to ensure that all matters referred are thoroughly documented, made it impossible to refer all of these cases until early in the following fiscal year.

The Attorney General decides whether cases referred will be pursued in the courts, and to a great extent a decision to proceed reflects the quality of Activity investigative work. Therefore, the third measure of Activity effectiveness is the proportion of cases referred which result in proceedings being commenced. This measure appears in Figure 28, together with data on the results of completed court cases. As the Activity does not project results which depend on decisions of the Attorney General and the Courts, Figures 28 and 29 present historical data only.

Figure 28: Court Action

Activity excluding Marketing Practices				Marketing Practices		
81-82	82-83	83-84		81-82	82-83	83-84
24	21	15	Proceedings Commenced	179	179	123
72%	82%	70%	Proceedings Commenced as a % of Referrals	126%	89%	85%
11	16	22	Completed Court Cases	121	169	183
5	11	12	Convictions	94	121	139
6	5	10	Non-Convictions	27	48	44

Marketing Practices exceeded 100% in 1981-82 because an unusually high number of cases referred to the Attorney General in 1980-81 were not proceeded with until the following fiscal year. It should be noted that charges are frequently laid under multiple sections of the Act to enable the courts to decide whether or not a specific or the general

sections of the Act are more applicable to the case in question. In addition to this, some charges are withdrawn where matters are duplicitous. These particular cases are reported as non-convictions.

The value of a successful prosecution relates not only to the sentence handed down against a particular offender, but also to the deterrent effect for the marketplace as a whole. A measure of this deterrent is the average level of fines imposed by the courts. Figure 29 shows total and average annual fines by year, for the Activity.

Figure 29: Results of Court Actions Activity Total

	1981-82	1982-83	1983-84
Total Convictions	99	132	151
Total Fines Levied ($000)	382	1,882	2,071
Average Fine ($000)	3.9	14.3	13.7

Revenue generated (see page 40) and total fines levied are dissimilar in that revenue generated is all monies paid into the Consolidated Revenue fund as a direct result of Activity case work; fines levied are amounts awarded by the courts for convictions under the Act. Fines levied are not necessarily paid in the fiscal year in which they are awarded, and in addition may be appealed successfully by the defendants.

D. Assistance Program for Urea Formaldehyde Foam Insulation Homeowners

Objective

To assist the Canadian public with problems related to urea formaldehyde foam insulation (UFFI) by coordinating all federal government activities related to the foam and by administering a program of financial and technical assistance. Within this objective are the following specific goals:

- to ensure that the public in general, homeowners, the real estate community, and others with particular concerns respecting UFFI have access to up-to-date information on the Assistance Program, on the most recent research findings regarding possible health or other effects of UFFI, on alternative corrective measures and on possible sources of assistance for homeowners;
- to ensure that every eligible homeowner receives necessary testing services and access to technical and other assistance;
- to ensure that every UFFI homeowner who applies and qualifies for a payment under the UFFI Act receives such a payment; and
- to ensure coordination of federal activity in the area of research and delivery of related programs and information.

Resource Summary

The UFFI Assistance Program Activity will account for approximately 36% of the Department's budget in 1985-1986. Approximately 90% of the Program's expenditures are in the form of contributions to affected homeowners, and 4% are designated for Professional and Special Services.

Figure 30: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures	7,243	120	14,675	184	18,308	209
Contributions	62,500	-	75,000	-	119,099	-
	69,743	120	89,675	184	137,407	209
Revenue	-		30		1,018	-

Revenues are not available to the Department as offsets against expenditures. For more details on revenue, see Section III, Supplementary Information, page 66.

Description

This Activity, consisting of the following functions, is carried out by four main operational areas:

Technical Services:

- provides an on-demand formaldehyde screening test for eligible dwellings;
- provides full-scale testing and individualized information on corrective measures; and
- provides training on corrective measures and a registration program for contractors and UFFI homeowners.

Program Delivery:

- processes applications, determines eligibility and oversees the progress of homeowners through the steps of the Program; and
- administers and delivers financial contributions, including advances to homeowners upon receipt of valid requests.

Policy and Communications:

- researches, develops, and coordinates federal government activities and policies relating to UFFI in liaison with other federal departments and with other levels of government and the private sector where required;
- initiates communications strategies and prepares material to convey the required information to various interest groups, giving priority to UFFI homeowners;
- consults with homeowners' representative groups, explains Program policies, and reviews and reacts to their legitimate concerns, to the extent possible; and
- provides toll-free telephone information to the public regarding the Program.

Administration:

- provides all operating and maintenance management to sustain and administer the Activity, through monitoring the budget, contracting professional services, and providing internal administrative support services.

Past Financial Performance

Figure 31: 1983-84 Financial Performance ($000) and Person-Years

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures	18,308	209	19,469	100	1,161	(109)
Contributions	119,099	-	44,000	-	(75,099)	-
	137,407	209	63,469	100	(73,938)	(109)
Revenue	1,018		-		(1,018)	

Due to a higher number of claims than anticipated, additional resources were obtained, subsequent to Main Estimates, through Supplementary Estimates ($72.4 million and 131 person-years), inter-activity transfers (a net increase of $2.5 million and a net decrease of 19 person-years) and adjustment to the contributions to employee benefit plans (increase of $0.4 million). Out of the revised total budget, the actual operating surplus was approximately $0.9 million mainly due to lower than anticipated contract costs for inspection with the Central Mortgage and Housing Corporation and with full scale testing contractors.

The change in contributions was fully offset by Supplementary Estimates items ($69.6 million) and a budget transfer from the Metric Commission Activity ($6.0 million) resulting in a surplus of $0.5 million.

The variance in revenue of $1.0 million was mainly due to an adjustment for the Payables at year end which was established for 1982-83. Payables at year end accounts are provided for the payment for goods and services received but not paid for by the end of the year: the adjustment deletes the balance remaining in the accounts and represents amounts which were unpaid at the time the account was closed.

Fewer homeowners than expected are undertaking corrective measures in 1984-85 resulting in budget adjustments.

Performance Information/Resource Justification

Since its inception, the UFFI Assistance Program has undergone significant and frequent changes. The deadline for registration was extended to September 30, 1983 and more homeowners than anticipated registered giving an approximate total of 57,500.

More contractors than anticipated successfully completed the basic training course and registered, making it possible for more homeowners to get work done during 1983-84 and advance rapidly through the Program. It was these factors that made requests for increased funding necessary for 1983-84. However, in 1984-85, claims for completed work are not being received as rapidly as had been expected. Approximately 12,500 homeowners could complete corrective measures in 1985-86.

E. Administration

Objective

To provide management direction, policy and planning co-ordination and central administrative services to the Department; to encourage and assist the Canadian public and federal government departments in the adoption of the metric system of measurement (S.I.) in Canada; and to fulfill the functions of Registrar General of Canada.

Resource Summary

The Administration Activity will account for approximately 13% of the Department's 1985-86 budget. Within the Activity, 64% of expenditures are for personnel costs.

Figure 32: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

	25,680	430	37,844	508	37,739	551
Revenue	100		100		743	

* The Metric Commission will be dissolved at the end of 1984-85 and a small Metric Office (18 person-years and approximately $3.1 million) will be created within the Policy Coordination Bureau.

Revenues are not available to the Department as offsets against expenditures. For more details on revenue, see Section III, Supplementary Information, page 66.

Operational Goals: Some specific targets for 1985-86 include:

- the integration of a small Metric Office into the Bureau of Policy Coordination with the phasing out of the Metric Commission;
- continuation of automation to cope with expected higher workloads in the Office of the Assistant Deputy Registrar General in both the Conflict of Interest Group and the Registration Division, and implementation of approved recommendations from the Sharp-Starr Task Force on conflict of interest and post-employment guidelines;
- within Personnel, improving the automated access to and accuracy of personnel management information and coordinating the implementation of the Affirmative Action program; and
- beginning program evaluations in the Marketing Practices and Bankruptcy sub-activities and Patents area and completing one on the Consumer Products sub-activity.

Description

The Administration Activity is made up of five sub-activities:

Program Management: includes the offices of the Minister and Deputy Minister, the Departmental Secretariat and Legal Services.

Finance and Administration Directorate: provides the corporate level planning and control coordination function as well as financial and administrative policy, coordination and services including library services, and data processing.

Personnel Branch: administers the personnel management system within the Department; and provides service to departmental management and employees for the personnel functions of planning and staffing; organization and classification; staff relations and pay and benefits; training; affirmative action; official languages; counselling; occupational health and safety; security and fire and emergency; and personnel management information.

Assistant Deputy Registrar General of Canada: administers the government's Formal Documents Regulations and related statutes and administers, on behalf of the Prime Minister, the Conflict of Interest guidelines for Lieutenant Governors, Ministers, members of their exempt staff and selected officials appointed by the Governor in Council. It also provides guidance on Conflict of Interest matters whenever consulted by departments, agencies, other governments and individuals.

Policy Coordination Bureau: has four operating units: Policy Research, Analysis and Liaison; Audit, Evaluation and Control; Communications; and the Metric Office.

Policy Research, Analysis and Liaison conducts research and analysis in the consumer and corporate affairs areas with emphasis on developing and securing adoption of legislative and regulatory reforms, and provides advice and recommendations relative to departmental policies and other policies emanating from the outside which may be of direct interest to the department's mandate. On the liaison front, the Directorate seeks an efficient and effective representation in the federal, federal/provincial and international fora.

Audit, Evaluation and Control provides the independent review mechanisms of internal audit and program evaluation that apprise the Deputy Minister on the strengths and weaknesses of internal program management and the actual program results being achieved, and how these might be improved.

Communications participates in the planning of departmental programs and develops supporting communications programs essential to their implementation and continuing effectiveness. The Branch also administers central agency policies on such matters as publishing, film exhibit production, federal identity, advertising and special events.

The Metric Office will be created after the phase-out of the Metric Commission. Its purpose is to provide advice and information on metric practices and conversion within and outside Canada, to monitor the progress of the use of metric throughout government, to provide information and maintain public awareness and to liaise and provide assistance and support for the continuing conversion of industry, all levels of government and the general public to the metric system.

Past Financial Performance

Figure 33: 1983-84 Financial Performance ($000) and Person-Years

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y

Metric Commission*	11,431	88	20,266	99	8,835	11
	37,739	551	43,159	522	5,420	(29)
Revenue	743		100		(643)	

* This activity will be dissolved at the end of fiscal year 1984-85.

Subsequent to the preparation of the 1983-84 Main Estimates, some changes were initiated which served to reduce the original resource levels to approximately $41.3 million. An amount of $6.0 million in contributions was transferred from the Metric Commission (due to lower than anticipated claims under the contributions program) to the UFFI Activity to accommodate an increased number of claims on the part of homeowners thereby reducing the initial Main Estimates levels. The initial allocation was also increased by a net amount of approximately $4.0 million and 19 person-years as a result of the transfers from various other activities to accommodate costs for some common services performed on behalf of all activities. Another increase of approximately $200,000 and 13 person-years through Supplementary Estimates and from Treasury Board Vote 10 - Employment Initiatives was also reflected in the resource levels.

Out of the revised total budget, the actual total lapse was approximately $3.6 million and 3 person-years in the Administration Activity including the Metric Commission Activity. This was mainly due to lower than estimated contributions under the Metric Tools Assistance Program and cancellation or reduction in other projects due to the winding down of the Metric Commission Activity.

The variance in revenue of $0.7 million was mainly due to an adjustment for the Payables at year end which was established for 1982-83. Payables at year end accounts are provided for the payment for goods or services received but not paid for by the end of the year: the adjustment deletes the balance remaining in the account and represents amounts which were unpaid at the time the account was closed.

In the 1983-84 Part III of the Main Estimates the following initiatives were forecast:

- The establishment of an information dissemination service in the five regions supported by communication officers;
- Tabling in Parliament of a bill to amend the Copyright Act;
- Presentation of amendments to the Interest Act, the Tax Rebate Discounting Act, and the Canada Business Corporations Act for consideration by the Government;
- Completion of program evaluations in the area of traded goods, deceptive marketing practices, and weights and measures.

In addressing these goals, the Department placed regional communications officers in all five of its Regional Offices; a white paper on Copyright was tabled in April 1984; and policy development work progressed during the year on amendments to the Interest Act, the Tax Rebate Discounting Act and the Canada Business Corporation Act. However, because of other priorities, Cabinet only had time to consider the Interest Act amendments. Program evaluations were begun in the areas of traded goods and deceptive marketing practices. Delays in establishing the Program Evaluation function, as well as a longer evaluation time frame recommended in the initial assessment studies, delayed implementation of the program evaluation plan by one year. The revised plan is now on schedule.

Following is the status of initiatives planned by the Metric Commission for 1983-84. The initiative for the metric conversion of scales was nearing completion in November 1983. However, owing to an Ontario Court decision concerning enforcement of regulations under the Weights and Measures Act in the gasoline industry, a moratorium was introduced on metric regulations under this act. This moratorium prevented implementation of the final step of the program on January 1, 1984, that is enforcement of regulations stipulating advertising of food weighted at the point of retail sale only in metric units.

The Contributions Assistance Program in support to Metric Tools Conversion proceeded as scheduled to the final cut-off date for tool purchases on March 31, 1984. Processing of residual claims continues and completion of the program operations is forecast during the final quarter of 1984-85 as originally planned.

A decision was made to phase out Metric Commission Canada by March 31, 1985. This, of necessity, accelerated the completion of activities and this is now in progress. There will remain some residual activities after the closure date, and responsibility for coordinating and monitoring these continuing conversion activities will rest with a small Metric Office to be set up in the Bureau of Policy Coordination.

Resource Justification

Figures 34 and 35 show the ratio of overhead person-years and overhead costs to the Program total.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the current salary range by occupational group as at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 39 summarizes capital expenditures by type of expenditures.

To employed persons required to purchase duplicate measurement sensitive tools because of Metric Conversion	-	4,250,000	4,196,128
	63,716,000	80,239,000	124,564,745
Total Transfer Payments	64,316,000	80,939,000	125,264,745

B. Cost Analysis

The Department's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered to ascertain the net cost of the Program. These other items are services provided without charge by other government departments and revenues generated by the Department that are not credited to the departmental votes. Figure 41 provides an analysis of the net program cost by activity.

Figure 41: Net Cost of Program by Activity ($000)

	Consumer Affairs	Corporate Affairs	Combines Investigation & Competition Policy	Assistance Program for Urea Formaldehyde Foam Insulation Homeowners	Administration	Total Program
1985-86 Estimates	55,594	26,692	15,653	69,743	25,680	193,362
Add: Services Provided without Charge by Other Departments

4. Trust Funds

Unclaimed Dividends

Under Section 125 of the Bankruptcy Act, the Superintendent is the depository for the funds distributed to the creditors but which, for one reason or another, remained unclaimed by the creditors for at least 30 days. At September 30, 1984, the balance in this trust fund stood at $2,415,526.

Undistributed Assets

Also under Section 125 of the Act, the Superintendent receives all funds from trustees which cannot be distributed to creditors. This situation occurs usually when the trustee receives relatively small amounts after he/she has made the distribution to creditors and a further distribution is not economically feasible. The funds so received are available, on request, to the creditors who are entitled thereto. At the end of September 1984 the balance in this fund stood at $1,078,334.

Correctional Service Canada

1985–86 Estimates

Part III

Expenditure Plan

681

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Correctional Service
Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $743,329,000 in support of the 1985–86 Correctional Service Program. The remaining expenditures, estimated at $52,503,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985–86 Main Estimates	1984–85 Main Estimates
	Correctional Service Program		
15	Penitentiary Service and National Parole Service – Operating expenditures	574,560	561,075

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

In the current year the Correctional Service Program (CSC) has established the following performance goals:

- to contain escape rates in minimum, medium and maximum security level institutions (see pages 9, 33, and 46);
- to complete the 1985-86 portion of CSC's 10 year Accommodation plan (expenditure requirements estimated at $145 million for 1985-86). This plan is scheduled to be completed by 1990. (See pages 9, 21 and 68);
- to maintain zero growth in constant dollars in the operating cost per offender (see pages 9 and 16);
- to contain the person-year per offender ratio at .576:1 in 1985-86 and at .600:1 by 1990 (see pages 9 and 16); and
- to contain the cost of overtime expenditures at 9.5% or less of regular salary costs (see pages 9 and 16).

2. Financial Summary By Activity

Figure 1: Financial Requirements by Activity ($000)

	Main Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Planning and Management	**21,765**	22,523	(758)	27
Custody of Inmates	**149,392**	140,934	8,458	31
Education, Training and Employment	**76,534**	79,231	(2,697)	35
Offender Case Management	**163,140**	161,289	1,851	43
Health Care	**43,701**	43,119	582	50
Technical Services	**282,711**	248,168	34,543	55
Administration	**58,589**	62,319	(3,730)	60
	795,832	757,583	38,249	
Person-years	**11,105**	10,818	287	

* There has not been significant change from 1984-85 Main Estimates. The 1984-85 forecast is 1.9 million or .2% less than the 1984-85 Main Estimates of $759 million (Extracts from Part II of the Estimates page 4).

Explanation of Change: The financial requirements for 1985-86 are 5% or $38.2 million higher than the 1984-85 forecast expenditures. This increase is due primarily to:

- net effect of a $73 million increase in planned capital expenditures for the provision of inmate accommodation projects and a $45.7 million reduction in other capital project, equipment, and other capital changes. (See page 9, 21, 59 and 68) — $27.3 million
- net effect of an allowance for increases in salary and employee benefit plans ($17.8 million) less offsetting adjustments in salary and other operating costs ($6.9 million) — $10.9 million

B. Recent Performance

1. Highlights

The following relates to the major goals established by CSC for 1983-84.

Containment Of Escape Rates: CSC's goal of containing escape rates from medium and maximum security institutions at 11 and 2 per 1000 inmates respectively was bettered. The 1983-84 rates were 4.42 in medium security and 1.14 in maximum security institutions. The rate of escapes (walkaways) from minimum security institutions was 121 per 1000 as compared to a target of 200 per 1000 inmates.

Ten-Year Accommodation Plan: In 1983-84 a new institution at Drummondville, Quebec, was completed as were two new living units at La Macaza, Quebec, and two 48 cell segregation units at the Kent and Edmonton Maximum Security Institutions. Major construction activity began for the 330 cell Atlantic Institution at Renous, New Brunswick and the 388 cell Donnacona facility in Quebec. The special handling units at Ste. Anne-des-Plaines and at Prince Albert were begun, with commissioning forecast for September 1984. Planning is well advanced for other projects to start in 1984-85 with Master Development Plans reaching final stages for 18 institutions. (See page 21)

Cost Per Offender - Constant Dollars: In 1983-84 the cost per offender in 1981-82 constant dollars decreased by $1,105 to $26,575 as compared to a 1982-83 cost of $27,690. (See page 16)

Person-Year Per Offender: The 1983-84 person-year per offender ratio target of .600:1 was bettered, the actual ratio was .592:1. (See page 16)

Control Of Overtime: Implementation of improved control measures have resulted in a reduction of CSC's overtime expenditures which are expressed as a percentage of salary costs. The 1983-84 goal of 10% was achieved with an actual rate of 8.98%. This resulted in a saving of $5.3 million over 1983-84 main estimates. (See page 10 and 16)

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Planning and Management	18,987	19,421	(434)
Custody of Inmates	130,747	134,095	(3,348)
Education, Training and Employement	62,495	73,463	(10,968)
Offender Case Management	138,287	139,884	(1,597)
Health Care	36,174	38,890	(2,716)
Technical Services	207,419	210,481	(3,062)
Administration	57,810	50,789	7,021
	651,919	667,023	(15,104)
Supplementary Estimates and other authorized changes		10,872	(10,872)
Total Appropriation	651,919	677,895	(25,976)

The lapse of approximately $26 million represents 3.8% of CSC's total appropriation. Approximately $7 million or 27% of this lapse was due to CSC's response to government restraint measures. The $7 million included frozen funds for Salaries of $0.24 million, Other Operating of $4.9 million, Transfer payments of $0.85 million and capital of $1.05 million.

The remaining lapse was due to the following:

- savings related to CSC's efforts to contain or reduce overtime through improved control and monitoring measures; $5.3 million
- reductions in other operating dollars due primarily to lapses in funds for inventory materials in CSC industries operation (see page 36); $6.7 million
- reductions in salary dollars due to lapses in various activities; $2.7 million
- reductions in capital and equipment funds due to slippage in planned construction projects $4.2 million

C. Background

1. Introduction

The Correctional Service of Canada is part of the criminal justice system. This system's operation depends upon its closely inter-related components, which include the body of criminal laws, law enforcement agencies, the judiciary, and correctional services. Jurisdiction over these components is shared and divided among all levels of government. At the federal level, the Correctional Service is a part of the Ministry of the Solicitor General, which also includes the Royal Canadian Mounted Police and the National Parole Board. The judiciary is the responsibility of the Department of Justice.

2. Legal Mandate

The legislative and constitutional framework which guides the Correctional Service of Canada is set out by the Constitution Act 1867, the Criminal Code of Canada, the Penitentiary Act and Regulations, the Parole Act and various international agreements. These include the United Nations Standard Minimum Rules for Treatment of Prisoners and the International Covenant on Civil and Political Rights. In addition to these the Correctional Service of Canada adheres, where appropriate, to the standards developed by the American Commission on Accreditation for Corrections.

Under the provisions of the Criminal Code of Canada, persons sentenced to two years or more are imprisoned in a federal penitentiary. Anyone sentenced to less than two years, however, is imprisoned in a provincial reformatory or jail. The only exceptions occur when a province and the federal government contract to exchange offenders for specific purposes (e.g., moving an offender close to home near the end of his (her) sentence, providing a higher level of security for a provincial inmate).

3. Program Objective

The objective of the Correctional Service of Canada is to "administer sentences imposed by the courts and to prepare offenders for their return as useful citizens to the Community".

4. Program Organization for Delivery

Activity Structure: The many aspects of administering sentences and preparing offenders for their return to society have been divided into activities each with an objective that contributes to meeting one or both aspects of the program object. Generally however, the Custody of Inmates activity provides for the secure security of inmates, ensures the protection of the public, the staff and the inmates themselves. Education, Training and Employment of Inmates and Offender Case

Management take the lead in preparing offenders for release to the community and for ensuring that other CSC activities generally contribute to preparing inmates for release.

CSC has identified seven activities which best reflect what the Service is doing and how it is working to meet its stated objective. Each activity, where appropriate, is divided into sub-activities. An outline of the activities is presented in Figure 3.

Figure 3: Activity Structure

Organization Structure: The Correctional Service of Canada is organized through three levels of management: national, regional and institutional. National headquarters, located in Ottawa, is responsible for policy development, national planning and the monitoring, evaluation and audit of policy and program implementation.

The five regional headquarters are: Pacific Region - Abbotsford, British Columbia; Prairie Region - Saskatoon, Saskatchewan; Ontario Region - Kingston, Ontario; Quebec Region - Laval, Quebec; and Atlantic Region - Moncton, New Brunswick. These regional headquarters coordinate program implementation within the operating units under their jurisdiction.

At the operation level, the CSC Program is delivered through a total of 122 facilities, 61 parole offices and 61 institutions. Of the 61 institutions, 19 are Community Correctional Centres (CCCs).

The organization administers the programs of the Correctional Service of Canada from coast to coast in as cost-effective a manner as possible; it is designed to provide a clear chain of command and line of accountability for the line managers of the organization; and to differentiate clearly between the management support services and those line activities essential to the achievement of the legislative mandate of the Service.

The Commissioner of Corrections is accountable for the management of the Program. The principal vehicle by which the Commissioner establishes policy decisions and monitors the progress of the Service in relation to the objectives established is a Senior Management Committee- This Committee is composed of the Commisioner, the five regional Deputy Commissioners responsible for the regions, and the branch heads in national headquarters responsible for the various programs identified through seven major activity centres. The Senior Management Committee is essentially a policy making body. The regional Deputy Commissioners have delegated authority in most operational areas including utilization of resources. They are assisted in their decision-making by similar regional management committees which include institutional wardens and parole district directors.

The accountability of managers and the activities for which they are responsible are defined through the activity structure, and the organization is designed to reinforce this accountability.

Each of the activities is represented by an organizational unit at the national and regional headquarters, and at each institution. Figure 4 links the activity structure (Figure 3) to the 1985-86 resources by region.

D. Planning Perspective

1. Environment

Several key factors signigicantly affect the direction and nature of the Correctional Services Program.

Offender Population Forecasts: Based on the fall 1984 forecast and as indicated in Figure 5, the 1985-86 offender population is expected to reach an average of 19,286. This is a 5.5% increase over the 1984-85 forecasted average population of 18,272. Population increases between 1985-86 and 1988-89 are forecast to be in the order of 3 to 4% per annum. The ultimate size and nature of the offender population will be influenced by the policies and decisions of the police and the courts, and by the effectiveness of parole operations within the system.

Figure 5: Offender Population Forecast

Economic and Social Climate: In terms of its ability to continue to deliver quality correctional services, CSC faces an important challenge in the 1980s. Increasing numbers of federal inmates, and the greater fear of crime and its consequences will result in public demands for more traditional correctional services. At the same time, overall economic conditions and greater restraint on public spending will make it increasingly difficult for CSC to expand traditional correctional services at the same rate experienced in the past. In addition, the focus on openness and accountability in government will require policy adjustments in corrections and conditional release as the full impact of access and freedom of information initiatives and the entrenchment of civil rights are felt. As well, CSC will have to respond to pressures for new services and policies to deal with special offender groups.

In the 1980s CSC must continue to be sensitive to provincial concerns and jurisdiction and the need for greater and more direct involvement of the community at all levels.

2. Initiatives

Having considered the environmental factors, Correctional Service of Canada (CSC) does not expect to make major changes in either the nature or direction of the Program in 1985-86. The long-term plan is to systematically refine, improve and enhance the management of existing activities already contributing to the achievement of program objectives. The CSC will undertake new programs only if they will substantially contribute to CSC's effectiveness. Emphasis in 1985-86 will be on refining and expanding initiatives identified in prior years' Expenditure Plans.

3. Update On Previously Reported Initiatives

Exercising more precise control over resources: CSC has identified the following areas for attention in an attempt to provide better control over resources:

- to improve the system for controlling overtime with the goal of containing overtime expenditures at a level of 9.5% or less of regular salaries in 1985-86. Actual overtime expenditures for 1982-83 were 8.6% of regular salary dollars. 1983-84 expenditures were 8.98% and 1984-85 expenditures are expected to be within 9.5%.

- to maintain zero growth in constant dollars in the operating cost per offender (see Figure 6). Constant dollars are calculated using 1981-82 as the base year. The following cost per offender (constant dollars) were achieved or are forecast:

1981-82	$29,658	(Actual)
1982-83	27,690	(Actual)
1983-84	26,575	(Actual)
1984-85	27,352	(Forecast)
1985-86	25,141	(Forecast)

- to reduce and maintain the person-year per offender ratio to .600:1 by 1990. It must be noted that a rapid achievement of the long term goal is due largely to increases in the inmate population without a corresponding increase in CSC's person-years. The person-year per offender ratio will gradually increase to a more normal level as CSC's inmate accommodation building program is implemented and as the person-years associated with this program come on line. The .600:1 ratio continues to be a meaningful goal to be achieved. The following person-year offender ratio were achieved or are forecast:

1981-82	.663:1	(Actual)
1982-83	.626:1	(Actual)
1983-84	.592:1	(Actual)
1984-85	.592:1	(Forecast)
1985-86	.576:1	(Forecast)

- to improve and rationalize CSC's programs through program evaluations. In 1982-83, evaluations were completed for the Family Visits program and Psychiatric Services. In addition, evaluation assessments were completed for Security and Intelligence, Psychological Services, Physical Health Services, Procurement and Stores, Engineering and Maintenance and Institutional Services. During 1983-84 a major analysis of the kinds of psychological services being offered to inmates was undertaken, as a result the thrust of the program was redefined. Several options for program delivery are under study. A Framework was established to identify what aspects of the Social and Recreation Program would be suitable for future evaluation. As a result of previous studies dealing with the training and employment of inmates, several ongoing problem areas were identified for future evaluation activity.

- CSC has continued to maintain the inmate unemployment rate between 6 to 8% over the last several years. The rate is based the number of inmates available for work rather than the total inmate population. (Normally 26-28% of the inmate population is not available for work - for details see page 39 and 40.) The rate of unemployment in 1981-82 was 8%, in 1982-83 6% and 6% in 1983-84.

- CSC is continuing its effort to obtain accreditation (See page 28) from the (U.S.) Commission on Accreditation. In 1982-83 19 CSC facilities were accredited (16 institutions, 7 of which were Community Correctional Centres (CCCs) and 3 were District Parole Offices). In 1983-84, a total of 7 CSC facilities were accredited 4 of which were CCCs. A total of 50 facilities have obtained accreditation as of March, 1984. Although accreditation was formally discontinued in 1983-84, a concerted effort to update CSC policy pertaining to accreditation standards was spearheaded in the latter part of 1983-84.

- CSC is continuing to improve its information systems, both manual and computerized. In 1982-83 development work began on improving the systems related to Financial control, food services, material management and maintenance management.

  A computerized financial system (FINFO/FINCON) which provides on line current financial information and financial management reports was introduced in all institutions in 1982-83 and extended to District Parole Offices in 1983-84. Additional features such as cash forecasting and construction project control were introduced in 1983-84. System costs in 1983-84 were in the order of $950,000 of which $150,000 were development costs (see page 30).

The development of a food service ration control system was completed in 1982-83 and implemented in all institutions in 1983-84. This has improved menu variety and nutrition while reducing the overall cost of rations. Although the number of meals prepared increased by 16% over 1982-83 the cost of rations for 1983-84 was 4% lower than that of 1982-83 in terms of 1981-82 constant dollars.

A material management information system (MMIS) was developed in and pilot tested in 1982-83. During 1983-84, the modules related to inventory control and inventory planning were implemented nationally. Development work is continuing on the procurement module of the system. Once fully developed and implemented, it is anticipated that the MMIS will enable CSC to reduce inventory holdings and operating costs while improving supply services to customers.

A maintenance management system which consists of two subsystems, (a uniform work order system and a preventive maintenance system) is being phased in over a five year period and is scheduled for completion by 1986-87. To date 30 institutions are utilizing both systems and 12 institutions have the uniform work order system only. It is anticipated that this system will result in an increase in productivity and an enhanced level of maintenance at the institutional level.

Figure 6: Actual and Forecast Expenditures per Offender

Figure 7: Person-Year/Offender Ratio

Developing coordinated inmate incentive systems: To motivate and encourage inmate participation in work and training programs CSC will continue to provide work-related programs. In 1985-86 it is planned to:

- produce farm, dairy and livestock production at a level sufficient to produce foodstuffs equivalent to $4.8 million (fair market value);
- produce CORCAN manufactured goods with a value of $14.5 million; and
- establish a fully integrated approach to inmate incentives which incorporates a blend of monetary and non-monetary rewards, such as earned remission.

The reported 1983-84 goal of providing employment for 92% of the available inmate population was achieved with a rate of 94%. Inmate employment trends are displayed in Figure 8.

Figure 8: Percentage of Inmates Employed *

* Excludes approximately 26-28% of the total inmate population who are not available due to segregation, dissociation, hospitalization, being unlawfully at large, under protective custody, in special handling units or temporary detention, on day parole or temporary absence, incarcerated in provincial institutions or who refuse to work (see Figures 29 and 30).

Continuing to improve the Correctional Services Industrial Program (referred to as CORCAN): These efforts are intended to produce revenues which will assist in defraying the overall cost of corrections. Actual and forecast revenues are presented in Figure 9. Additional information on revenues is contained in Section II page 41.

Figure 9: Actual and Forecast Revenues ($000).

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82
Inmate Employment	20,075	15,650	9,119	11,588	8,632
Other*	10,800	9,850	8,167	7,423	5,808
	30,875	25,500	17,286	19,011	14,440

* Other revenue includes receipts from maintenance of provincial inmates, inmate canteen operations, rental of staff housing and other miscellaneous revenue.

Continuing to improve the quality and quantity of staff training and development courses: CSC implemented a new training delivery system in 1983-84 based on a systems approach to training. The CSC model is based upon the identification of needs and standard curriculum design, with education and validation techniques built in. Training programs have been developed and implemented for courses in crisis management, leadership, supervisor training and middle management development program. Computer assisted learning (CAL) for staff has been introduced on a pilot basis. Forty percent of refresher training in the Prairies Region in 1983-84 was furnished through CAL.

Implementing the Accommodation Plan: CSC has adopted a ten-year Accommodation Plan to be completed in 1990. The Plan is based on projected population demands and inmate profiles, and it takes into account the effects of cascading inmates to lower-security levels. As projected populations and inmate profiles are re-evaluated and updated annually, the details of the Accommodation Plan are also updated annually.

The unprecedented growth in the inmate population that began in 1982 has necessitated a continued revision in both the Long and Short Term Accommodation Plans. The 1981 Long Range Accommodation Plan, essentially a replacement program, would have resulted in a shortfall of over 4,000 cells by 1992/93. Consequently, a National Headquarters Accommodation Planning Committee was established in 1983 to develop, review and assess the impact of alternative planning options for meeting expansion needs. Current plans emphasize the need to provide new accommodation and to reduce overcrowding in 1986, as of 17 October, 1984, 962 inmates were double bunked.

The increased inmate population has required the initiation of additional temporary contingency measures. These provided for a potential increase in 1983-84 capacity of approximately 1,100 beds through the use of trailer units, double-bunking and renovated existing space. (See Figure 59, page 68 for costs related to the accommodation plan.)

Programs for Special Offender Groups: CSC is continuing to develop and implement programs for special offender groups such as violent and protective custody inmates; sex offenders; female, native and long-term offenders. Initiatives include the central handling of dangerous and protective custody inmates, programs for sex offenders, improved facilities and increased learning opportunities for female offenders and the development of a five-year plan to address the special needs and program delivery requirements for native offenders. (For details see page 47).

4. Program Effectiveness

Criteria for measuring the effectiveness of the Correctional Service Program must be related to its basic objective of administering the sentence imposed by the courts and preparing the offender for return to the community.

Criteria for measuring successful incarceration include reducing or eliminating escapes from custody and reducing or eliminating the number of cases in which inmates harm either the public, staff, other inmates or themselves. Recent trends for custody-related incidents are provided in Figure 10. Trends in the rate of escapes in total and by type of institution are presented in Figure 11. (See also page 33.)

Figure 10: Trends in Custody-Related Incidents

Figure 11: Trends in Number of Escapes (Rates per 1,000 Inmates)

Although it is difficult to provide criteria for measuring success in preparing offenders for return to the community, it is generally accepted that a successful corrections program must be sensitive to the recidivism rate.

A recidivist may be defined as a person who has served time in a federal institution, been released, convicted of a new offence, and returned to a federal institution. A study of recidivism suggests that a five-year period is sufficient for the follow-up of released inmates, because if recidivism is going to occur, it usually takes place within five years, and more commonly within two years.

Recent studies of inmates released and re-admitted to federal institutions in the years between 1974 and 1983 indicate a gradual decline in both the five year and two year return rates. Details are presented in Figure 12.

Figure 12: Percentage of Inmates Released from and Re-Admitted to Federal Institutions after New Offences.

The recidivism rate reflects not only the effectiveness of the Correctional Services Program, but also police effectiveness, sentencing patterns, parole regulations and enforcement and the offenders' criminal activities.

A related measure of effectiveness is in the percentage of parolees and persons under mandatory supervision who are returned to custody for violating the terms of their parole. One aspect of CSC's role is the protection of the public. In fulfilling this objective, CSC's community supervision staff will, when warranted, recommend to the National Parole Board that an inmate's parole or Mandatory Supervision be revoked. These trends are illustrated in Figure 13. Caution must be used in interpreting this information, as it reflects the environment of the entire criminal justice system. It would be misleading to attribute changes solely to CSC policies.

Figure 13: Percentage of Parolees and Persons Under Mandatory Supervision Returned to Custody for Violation of Terms of Release or New Offence.

In addition to release on parole or mandatory supervision CSC operates in cooperation with the National Parole Board a Temporary Absence program. Temporary absences (TAs) are a form of short-term release, usually not longer than three days, which may be granted to an inmates with or without a CSC escort, for medical, humanitarian (family illness, funerals, divorce court, community service, recreational, cultural activities, etc.) or administrative reasons. All inmates are eligible for an Escorted Temporary Absence any time after the commencement of their sentence. Generally, inmates are eligible for an Unescorted Temporary Absence after completing one sixth of their sentence, or at any time for emergency medical treatment. Figure 14 and 15 depict the total number of TAs granted and the successful completion rate of TAs respectively.

Figure 14: Temporary Absences (TAs) Granted

Figure 15: Percent of Temporary Absences Successfully Completed

	75/76	76/77	77/78	78/79	79/80	80/81	81/82	82/83	83/84
Escorted TAs	99.9	99.9	99.9	99.8	99.8	99.9	99.9	99.9	99.9
Unescorted TAs	99.1	99.2	99.0	98.2	98.2	98.3	98.8	98.8	99.0

Section II
Analysis by Activity

A. Planning and Management

Objective

To manage the Service in a manner so as to: protect the public; meet the conditions of sentence imposed by the courts; allow the offender the opportunity for personal reformation; promote and contribute to the development of an effective criminal justice system in Canada; and minimize the cost necessary to achieve the above.

Resource Summary

The Planning and Management Activity accounts for approximately 3% of the 1985-86 Correctional Services operating budget.

Figure 16: Activity Expenditures and Person-Years ($000)

Communications	2,523	2,280	243
Executive Secretariat	460	438	22
	18,987	19,421	(434)

Description

Office of the Commissioner: This office is responsible for managing all aspects of the Service.

Senior Management: Senior management consists of the Senior Deputy Commissioner, Regional Deputy Commissioners, Regional Executive Officers, Institution Wardens, Staff College Directors and their administrative and support staff. They control and manage the regions and institutions of the Service.

Inspector General: This sub-activity inspects institutions for compliance with standards and policies, investigates irregularities and continuously audits the management, financial and personnel functions of the Service, and ensures that inmates are treated fairly and humanely and are accorded rights in terms of the Canadian Charter of Rights and Freedoms, international covenants and the United Nations Standard Minimum Rules for the Treatment of Prisoners. The Inspector General function is also responsible for coordinating CSC's efforts in obtaining accreditation for CSC facilities other than medical facilities. The standards developed by the American Commission on Accreditations for Corrections are being used where appropriate. Canadian standards are currently under development by the Canadian Association for the Prevention of Crime.

Policy, Planning and Systems: This sub-activity includes policy development, long-term planning, system development and an on-going evaluation of the CSC Program. These functions are carried out under the direction of the Deputy Commissioner, Policy and Planning and Administration and his national headquarters staff and through five Regional Planning Managers.

Communications: This sub-activity promotes public awareness, understanding and participation in the Correctional Service of Canada. These responsibilities are carried out under the direction of the Deputy Commissioner, Communications and his headquarters staff and through five regional communications managers. Communications in the Service have been evolving, over the past years, from a media relations and public information orientation into a proactive communications organization dealing with the media, the public and special interest groups within and outside the CSC. To date efforts have been concentrated on the media, certain external interest groups (national and international) and the general public. It is now intended to expand these efforts and to improve communications within CSC.

Executive Secretariat: This sub-activity deals with parliamentary matters including correspondence control and provides administrative support to the offices of the Commissioner and Senior Deputy Commissioner.

Performance Information/Resource Justification

The Planning and Management person-year offender ratio and cost per offender are displayed in Figures 18 and 19.

Figure 18: Actual and Forecast Planning and Management Person-Year/Offender Ratio

Figure 19: Actual and Forecast Planning and Management Expenditure per Offender

Planning and Management

Plans for 1985-86 include:

- completing a review of current and planned CSC resourcing methodologies;

- to complete program evaluations scheduled for 1985-86 in the following areas:

  - Inmates Affairs;
  - Psychological Services;
  - Communications;
  - Management Information Services;
  - Education and Training; and
  - Agribusiness.

- to undertake over the next five years a total review of CSC's planning system modules.

Update on Previous Plans

Overtime Expenditures: CSC's goal of containing overtime expenditures to 10% or less of regular salaries in 1982-83 and 1983-84 was achieved. The actual rates were 8.6% and 8.9% respectively.

Financial and other Management Systems: During 1982-83 CSC improved the Financial management system through automation with the implementation of FINFO/FINCON in all institutions and the majority of District Parole Offices. The development of other information systems, particularly those which focus on needs at the institutional level, are proceeding on schedule. In 1983-84 CSC completed the installation of the FINFO/FINCON system in District Parole Offices and added enhancements to the system for cash forecasting and construction project control.

Accreditation of CSC Facilities: In 1982-83, 19 facilities were granted accredited status by the (US) Commission on Accreditation for Corrections. These included nine institutions, seven Community Correctional Centres and three District Parole Offices. In 1983-84 7 facilities were accreditated. As of March, 1984 a total of 50 CSC facilities had been granted accredited status.

B. Custody of Inmates

Objective

To ensure secure custody and control of inmates, while meeting recognized international standards of humane treatment, in order to minimize the risk of harm being inflicted by inmates on the public, the staff, other inmates and themselves.

Resource Summary

The Custody of Inmates activity will account for approximately 24% of the CSC operating budget in 1985-86 (compared with 23% forecasted for 1984-85). Personnel costs account for 97% of this amount.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Custody of Inmates	**149,392**	**3,552**	140,934	3,498	130,747	3,322

Past Financial Performance

Figure 21: 1983-84 Financial Performance ($000)

The 1983-84 actual expenditures were 2.5% lower than the Main Estimates provision.

	1983-84		
	Actual	Main Estimates	**Change**
Custody of Inmates	130,747	134,095	**(3,348)**

Description

Custody of Inmate activity can best be described in terms of its three major responsibilities; operational security, preventive security and inmate population management.

Operational security is responsible for inmate supervision from fixed or mobile posts and observation by staff trained to foresee and prevent security problems. It includes the fences, towers, barriers, locking devices and other physical and technical controls to ensure security.

Preventive security is concerned with gathering, analyzing and disseminating security-related information and developing and operating an inmate profile system, compiling and analyzing incident reports and applying governmental security procedures.

Inmate population management plans and controls the distribution of inmates within the various categories of institutions across Canada in order to make the most effective use of cells, recommends adjustments to and closing of facilities, controls and effects the transfer of inmates between regions, administers the dangerous inmates and Special Handling Unit programs and monitors the placement of inmates in segregation.

Performance Information/Resource Justification

As a result of the implementation of post standards, increased use of living unit officers, an increased inmate population, and the installation of electronic perimeter intrusion detection equipment, a stable trend is forecast in the security person-year/inmate ratio as illustrated in Figure 22. The custody cost per inmate in constant dollars is also expected to increase slightly as shown in Figure 23. Corresponding effectiveness trends are presented on pages 22 and 23.

Figure 22: Actual and Forecast Custody Person-Year/ Inmate Ratio

Figure 23: Actual and Forecast Custody Expenditure Per Inmate

Custody

Plans for 1985-86 include:

- containing escapes in the various security levels at the following rate per 1,000 inmates. S7, S6, Multi-Level (ML) (formally categorized as Maximum security); and S5, S4 and S3 (formally Medium security).

S7 = 0	S5 = 4 per 1,000
S6 = 2 per 1,000	S4 = 6 per 1,000
ML = 2 per 1,000	S3 = 9 per 1,000

- ensuring that 100% of Institution Emergency Response Team members receive 12 days refresher training and that all other security officers receive 5 days refresher training;

- ensuring that existing manual recording systems are standardized and prepared for automation for:

  - Inmate counts and accommodation control;
  - Searches and contraband control; and
  - Visitor control.

Update on Previous Plans

Control of Costs: CSC continues to control the cost of custody through the installation of more efficient duty rosters, regular review of "posts" required and increased emphasis on electronic monitoring equipment.

Escape rates: Escape rates were contained within the established goal of 11 per 1000 inmates in medium security institutions and 2 per 1000 in maximum security institutions. Actual rates were 4.42 in medium security and 1.14 in maximum security institutions.

Major Assaults: The overall rate of major assaults on inmates by other inmates increased slightly from a 1982-83 rate of 4.98 per 1,000 inmates to 5.54 in 1983-84. The continuing increase in the inmate population causing over-crowding and necessitating double bunking and increased inmate tensions may have been a contributing factor in negating CSC's efforts to reduce this rate. Major assaults on staff by inmates declined significantly from a 1982-83 rate of 1.22 per 1,000 inmates to .67 in 1983-84.

Dangerous Inmates: In responding to the need for national policies and procedures for the custody of highly dangerous inmates, CSC has developed a treatment program which is in place at the Regional Phsychiatric Centre, Pacific region. In addition, specific institutions, existing and planned,have been designated for the central handling of violent and protective custody inmates.

Custody Post Analysis: Security in the institutions is provided by means of a series of "posts". A post is composed of a set of security-related tasks that one person is required to perform during one working shift. A detailed analysis of post requirements is carried out for each institution. The number of posts and the staffing requirements of each are determined after taking into consideration the security classification, the size and the layout of each institution and the duties to be performed. This analysis serves as the standard to support person-year requests for the institutions' security requirements and is subject to regular review to meet changing operational needs. It is important to realize that post requirements vary only slightly as the number of inmates rises or falls. Only the closing of a portion of an institution or a lowering of its security classification can significantly change the number of posts.

The custody person-year analysis for 1985-86 is summarized in Figure 24. The custody of inmates activity requires 3,347 person-years for institutions. The remaining person-years for this activity are for regional and national headquarters, and training person-years.

Figure 24: Custody Person-Year Analysis

	Person-Years			
	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Institutions	3,347	3,293	3,105	3,115
National Headquarters	45	45	44	38
Regional Headquarters	60	60	58	54
Training	100	100	115	99
Total Person Years	3,552	3,498	3,322	3,306

C. Education, Training and Employment of Inmates

Objective

To maximize employment, training and educational opportunities for all offenders in preparation for their reintegration into society by increasing the Correctional Service's capacity to provide meaningful work and training opportunities, by increasing, where appropriate, the emphasis on work programs that will generate revenue to help offset the operating cost of the Service and by effectively supporting the efforts of released inmates to find gainful employment.

Resource Summary

Expenditures for Education, Training and Employment of Inmates will account for approximately 12% of the Correctional Service's operating budget in 1985-86 (compared with 12% forecasted for 1984-85). This activity has forecasted revenue of $20 million, for details see page 41.

Figure 25: Activity Expenditures and Person-Years ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Industries	28,661	349	30,532	331	22,286	326
Agriculture Operations	7,619	87	6,900	80	5,810	76
Automated Document Processing	1,747	21	1,295	17	1,113	12
Education and Training	28,131	302	29,071	305	23,083	286
Inmate Incentive/ Resource Management	10,376	--	11,433	--	10,203	--
	76,534	759	79,231	733	62,495	700

Past Financial Performance

Figure 26: 1983-84 Financial Performance ($000)

The 1983-84 actual expenditures were 15% lower than the Main Estimates provision.

	1983-84		
	Actual	Main Estimates	Change
Industries	22,286	29,438	(7,152)
Agriculture Operations	5,810	7,636	(1,826)
Automated Document Processing	1,113	1,203	(90)
Education and Training	23,083	24,291	(1,208)
Inmate Incentives/Resource Management	10,203	10,895	(692)
	62,495	73,463	(10,968)

The variation between the estimated expenditures and actual was due primarily to under-expenditures for utilities, materials and supplies of approximately $8.4 million. The under-expenditure resulted when sales orders for the Industries Division failed to meet expectations particularly from Supply and Services Canada and Canada Post Corporation.

Description

Industries: Goods are manufactured at 22 institutions in 96 different shops, ranging from small operations producing one or two units at a time to larger operations producing high volumes of a few products on a batch production line basis. Major products include upholstered and modular office furniture, mail transfer boxes, mail bags, shoes and clothing. The ADP activity is a revenue generating program operating under the industries (CORCAN) umbrella. The program produces information processing related services at 9 institutions. Services produced include micrographics, data entry/data processing, videotex page creation (Telidon), word processing and packaging and distribution.

Under the Penitentiary Act and Regulations, CSC is restricted to selling goods and services produced by inmate labour to federal, provincial and municipal governments and to charitable, religious or other non-profit organizations unless special authorization is obtained from the Treasury Board. Approximately 86% of sales are made to federal government departments and agencies.

Agriculture Operations: The Agribusiness program has major operations in 6 institutions and minor operations in 4 institutions. Produce includes pork, beef, vegetables and dairy products, which are transfer

red to food services. It is estimated that approximately 30% of the Service's food needs are provided by Agriculture Operations. In addition, a Forestry program is operated in 4 institutions. Activities to include tree seedling production, forest harvesting, property upgrading and log salvage.

Education and Training: Accredited academic and vocational development programs are offered to inmates in 23 institutions operating within eight provincial educational jurisdictions and in full accordance with the various provincial standards. The Education and Training programs cover an integrated spectrum ranging from basic literacy through elementary and secondary education to college and university, including vocational, apprenticeship, life skills programs and library services.

Inmate Incentives/Resource Management: The activites of this program include the development of policy, procedures and guidelines covering inmate incentives and the employment of inmates. This includes the provision of an effective, fully integrated set of personnel management activities which directly support the skills development of inmates and contribute to the achievement of all institutional objectives.

Performance Information/Resource Justification

The person-year/inmate ratio is forecast to remain stable and the cost per inmate is forecast to decrease in terms of constant dollars in 1985-86.

Figure 27: Actual and Forecast Education, Training and Employment Person-Year/Inmate Ratio

Figure 28: Actual and Forecast Education, Training and Employment Expenditures per Inmate

Education, Training and Employment of Inmates

Plans for 1985-86 include:

- producing gross revenue from the sales of industrial products of $14.5 million;
- producing approximately 30% of CSC's food needs having a market value in the order of $4.8 million;
- generating a revenue of $.775 million in information processing services (ADP);
- maintaining the overall inmate/teacher ratio at 9.5:1 or better and containing or reducing the cost per pupil in constant dollars; and
- to employ 94% of the available inmate population.

Update on Previous Plans

Manufactured Goods: The target of increasing revenue from the sale of manufactured goods and automated document processing by 15% over the 1981-82 level of $7.5 million was achieved. Actual revenue in 1982-83 was $10.3 million, an increase of 38%. In 1983-84 revenue fell to $7.3 million when anticipated sales to Supply and Services Canada and Canada Post failed to meet expectations.

Agricultural and Farm Produce: The goal of increasing the value of agribusiness products by 10% over the 1981-82 level of $1.1 million was achieved. Actual revenue in 1982-83 was $1.28 million, an increase of 16%. Revenue for 1983-84 was in the order of $1.4 million, based on fair market value this revenue would have been approximately $4 million. Quality standards have been improved and vegetable storage preparation and grading facilities have been upgraded.

Automated Document Processing: The program has shown a steady revenue growth rate averaging 20% since fiscal year 1983-84. Increased inmate employment has been one of the many positive results of this contemporary program.

Inmate Employment: The goal of maintaining the inmate unemployment rate at 7% or less was achieved. The 1982-83 unemployment rate for those inmates available for work was 6% and 6% again in 1983-84.

Distribution System for Agribusiness: In 1982-83 the distribution system was expanded and agribusiness products such as milk, beef, pork, eggs and vegetables, were provided to Alberta institutions from Saskatchewan Farms, in 1984-85 the supply of milk and beef to Quebec institutions was initiated.

Forestry Programs: The systems employed for the control and monitoring of forestry operations were improved and operating procedures were standardized. Plans are under development to improve the employment and training opportunities for inmates in the forestry program.

Pupil/Teacher Ratio-Cost per Pupil: The goal of attaining a 1982-83 pupil/teacher ratio of 8:1 was bettered with a ratio of 8.6:1. The goal of reducing the cost per full-time pupil (constant dollars) to the 1980-81 level of $5,900 has been restated to include those inmates participating in part-time training or correspondence courses. In addition CSC has rebased from a 1977-78 base year to 1981-82 for constant dollar comparisons. The 1982-83 restated goal of $7,326 was bettered, the actual constant dollar cost was $7,084. The 1983-84 pupil/teacher ratio goal of 8:1 was bettered with an actual ratio of 9:1. The 1983-84 cost per student expressed in 1981-82 constant dollars was $6,839, a reduction of $245 per student over the 1982-83 costs.

Inmate Employment: A percentage of the inmate population is not available for employment due to operational limitations and other factors. This percentage is estimated to be between 26-28% for 1985-86 distributed as indicated in Figure 29.

Figure 29: Percent of Inmates Not Available for Work

Segregation	4.5
Hospital and Pshychiatric Centres	4.0
Unlawfully at Large	1.5
Protective Custody	8.0
In Special Handling Units	1.0
Day Parole and Temporary Absence	6.0
In Provincial Institutions	1.5
Refusal to work and other	1.0
Total	27.5

An overall indication of the responsiveness of the Service in providing meaningful work and training is demonstrated in the inmate employment statistics, which are illustrated in Figure 30.

Figure 30: Inmate Employment Statistics

Total inmate population	12,667		12,185		11,523		10,638	

* see Figure 29.

Revenue Generation: CSC has two complementary initiatives: to increase the capacity for providing work and training opportunities and, where appropriate, to increase the emphasis on work plans that will generate revenue from third parties to help offset the operating costs of the Service or contribute directly to its self-sufficiency. Details of actual and forecast revenues are presented in Figure 31.

Figure 31: Revenues Generated ($000)
Education, Training and Employment

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Industries	14,500	10,500	7,327	10,028
Automated Document Processing	775	650	394	280
Agribusiness*	4,800	4,500	1,398	1,280
	20,075	15,650	9,119	11,588

* Effective 1 April, 1984 the pricing system at which agribusiness food is transferred to Food Services of CSC was changed to reflect a fair market value system.

Education and Training: Generally a penitentiary school is supervised by an Assistant Warden, Education and Training, who is the school principal. Teaching is carried out by staff teachers and by teachers from municipal boards of education, colleges and universities under contractual arrangements. The CSC permanent staff numbers approximately 175 teachers and principals, 90 institutional support staff, including library staff. Another 15 staff members provide supervision and policy direction from regional and national headquarters. Contract teaching staff totals 110.

The Education and Training Division plans to improve efficiency by improving the pupil/teacher ratio. CSC's goal is to achieve an average ratio of 9.5:1. Steady progress toward achieving this goal has been made as CSC has continued to improve the ratio over the past several years. Details are provided in Figure 32.

Figure 32: Pupil/Teacher Ratio

1980-81	1981-82	1982-83	1983-84	1984-85	1985-86
6.7:1 (Actual)	7:1 (Actual)	8.6:1 (Actual)	9:1 (Actual)	9:1 (Forecast)	9.5:1 (Forecast)

Another measure of efficiency is the amount of expenditure per pupil. This trend is presented in Figure 33.

Figure 33: Amount of Expenditure per Pupil

* The method of calculating the cost per pupil has been changed in order to recognize those inmates who participate in part-time training or correspondence courses. The previous method was to use full-time students only.

Inmate Incentives: Although it is the inmates themselves who must make the important choices and accept final responsibility for personal development, CSC operates programs to encourage inmates to participate in a full range of activities. Pay for work performed is one aspect of this approach. Other items considered to be inmate incentives are inmate expenses associated with inmates participating in the temporary absence and day parole programs and the cost of subsidizing provincial tobacco tax. This subsidization which began in 1977 will be eliminated effective 31 March, 1985. Although all items are considered to be expenses associated with Inmate Incentives, only the first item, Inmate Pay, is a charge to the Inmate Incentive sub- activity. Details are provided in Figure 34.

Figure 34: Details of Inmate Incentives ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84

Tobacco tax	--	300	374
	11,732	13,133	12,047

D. Offender Case Management

Objective

To prepare offenders for return to the community as useful citizens through the provision of counselling services and opportunities for social, emotional, physical and spiritual development, and through community supervision of offenders on conditional release; to ensure the recognition and protection of offenders' rights while under the authority of the Correctional Service of Canada.

Resource Summary

This Activity will account for about 26% of the Correctional Service's 1985-86 operating budget (compared with 26% forecasted for 1984-85). Personnel costs account for 80% of this amount. Revenue in this activity for 1985-86 is forecast to be in the order of $1,150,000, this revenue is derived from receipts for the incarceration of provincial inmates in federal institutions ($920,000) and from day parolees who are in receipt of wages for board and lodging ($230,000).

Figure 35: Activity Expenditures and Person-Years ($000)

Living Unit Officers	43,066	44,988	(1,922)
	138,287	139,884	(1,597)

Description

Offender Programs-General: This sub-activity consists mainly of National and Regional Headquarters' staff who are responsible for policy and procedures development, and program quality control.

Chaplaincy: The provision of spiritual care for all denominations is of prime importance within CSC. Inmates are encouraged to develop the spiritual dimension of their lives through church services, discussion groups, religious education and pastoral visits and consultations with other inmates and with their families. Two chaplains are normally assigned to institutions that contain more than 350 inmates. Institutions with smaller populations and denominations with only a few adherents within larger institutions are served by clergy on contract or by visiting clergy. The current trend in CSC in respect to the provision of religious services and education is through an accord with the Inter-Faith Committee on Chaplaincy. The Committee assists CSC in the hiring process for chaplains on contract. This change is resulting in an increased opportunity for church organizations to be involved in the spiritual programs within CSC.

Social and Community Affairs: Offenders are provided with the opportunity for social, emotional, physical and personal development through recreation and physical fitness programs, hobby, art and craft programs, citizen participation programs, assistance programs for social and family relations and special programs to meet the needs of female,

native and other groups of offenders. Another important function is to promote effective working relationships and to administer policy on utilization of voluntary sector agencies, such as the John Howard and Elizabeth Fry Societies, for services such as parole supervision and residential services.

Case Management and Living Unit Officers: These sub-activities provide coordinated management and administration of the offender's entire sentence, ensure that inmates receive maximum benefit from all available rehabilitative opportunities, maintain assessments on all federal offenders and make recommendations to the National Parole Board for conditional release through full and day parole.

The most important aspect of the Case Management sub-activity is Individual Program Planning, which begins soon after an inmate enters an institution. It continues throughout both the institutional and conditional release phases. When an offender is assigned to a cell or living unit, the offender is also assigned to a case management team consisting of the case management supervisor, a classification officer, a living unit officer, and, as required, psychologists, security officers, and/or medical staff. This team reviews all information on the offender and develops in conjunction with the inmate a program plan. Short and long-term plans consider the offender's needs and objectives, the services and activities in which the offender will participate, and plans for eventual transfer or conditional release. The offender's participation and progress are assessed and the offender is informed on a regular basis.

Psychology: This sub-activity is concerned with the state and positive development of an inmate's mental health. Counselling and therapeutic services/opportunities are offered to inmates during their incarceration and, where warranted, while on parole. Inmate assessment and case consultation services are provided to case management staff, living unit staff and institutional administrators. Consultation services on a wide range of behavioural science issues are also provided to CSC managers and administrators.

Performance Information/Resource Justifiction

Person-years per offender is forecast to decrease and the cost per offender in constant dollars is forecast to decrease. Related effectiveness trends are presented on pages 24, 25 and 26.

Figure 37: Actual and forecast Offender Case Management Person-Year/Offender Ratio

Figure 38: Actual and Forecast Offender Case Management Expenditures Per Offender

Offender Case Management

Plans for 1985-86 include:

- containing escape rates; CSC's goal is to contain the excape rate in S1 and S2 security level institutions (minimum) at 175 per 1000 inmates or less;

- continuing and new program initiatives: these plans include introducing new initiatives to provide support and treatment, where indicated, to those offenders demonstrating special needs, (e.g. alcoholics, sex offenders, drug offenders and long term offenders);

- initiatives geared directly to female and native offenders are planned. These include enrichment programs at the Prison for Women, Native Spirituality programs and Native Liaison programs; and

- extending the Family Visiting Program to additional Federal maximum and medium security institutions.

Update on Previous Plans

Implementation of the Streamlined Case Management System: A systematic approach was taken to reviewing security and program requirements of inmates. A Reclassification Matrix was developed in 1982-83 through extensive consultation with members of the Criminal Justice System. This approach will allow CSC to use and control its resources more effectively by insuring that inmates are incarcerated at the lowest security level possible while accomplishing its mandate of rehabilitation of the offender. Recent overcrowding of CSC facilities and a consequent shortage of resources has affected the Service's efforts to fully implement this initiative. All inmates except those in SHUs or S2 security level institutions, are to be re-assessed annually in order to reduce the population in the high level security institutions.

Providing appropriate Programs for Specialized Offender Groups: Treatment programs for sex offenders have been established at three Regional Psychiatric Centres and l'Institut Philippe Pinel in Québec. Plans also include the provision of the treatment program at those institutions where a concentration of sex offenders are found. Recent modifications to the program at the RPC Pacific and the Regional Treatment Centre, Ontario have been made as a result of an internal evaluation of program delivery. An institutional program has been initiated in the Ontario Region and plans are in an advanced stage of development for implementation in the Pacific Region.

Programs for female offenders include the upgrading of facilities at the Prison for Women and the expansion of program options including word processing, upholstery, industrial sewing and woodworking. These programs augment existing programs such as microfilming and educational programs. Access to several of these programs has been made possible through the practice of daily busing of female inmates from the Prison for Women to nearby institutions such as Collins Bay and Bath.

A five-year operational plan has been developed to improve program delivery to native offenders. The overall thrust is to improve resource services and opportunities to the native offender through the development of specific policy directions and inter-linkages within CSC, with other central agencies and with the private sector.

The development of specific programs for the long term offender so as to minimize the presumed debilitating effects of long sentences has not met expectations. CSC therefore plans to bolster efforts in this area. A literature search has been undertaken on this initiative. In addition to a variety of discussion on the subject, a submission to outline alternative courses of action will be prepared by March 1985.

Expand Opportunities for Family Visiting and Citizen Participation: Since the inception of the Family Visiting Program in 1980 the program has been expanded to 20 institutions. Over 1,400 extended visits (up to three days) have been conducted. The inmates who have participated believe that the opportunity for extended contact with their families has been extremely beneficial to rehabilitation efforts.

CSC's commitment to citizen participation and the role of volunteer organizations has resulted in the development and implementation of a policy on Community Volunteers which was developed in consultation with the National Committee on Volunteers. The policy recognizes and facilitates the vital contribution that volunteers make both to the inmates and to CSC in the development of policies and programs.

Resource Requirements: The resource requirements for the Offender Case Management activity are determined largely by a combination of workload formulae and analyses of post requirements. The Offender Case Management activity is responsible for two "populations" each in a different environment. The two environments and populations are:

- institutions, where results are directed to the preparation for return to society and the timely release of the population of incarcerated inmates; and

- the offender population on conditional release in the community and under CSC supervision.

The two largest resource components are: Institutional Case Management consisting of Case Management Officers and Living Unit Officers (LUOs); and Community Case Management (Parole Offices).

Institution Case Management: The LUO requirements are determined by post analysis, related to security classification, the number of cells and the layout of each institutions, similar to the processes prescribed for Security staffing standards. The Case Management Officer requirements are determined primarily through the application of workload related standards.

Community Case Management: The Community Case Management resource requirements are determined by a series of workload-related standards based on volumes of casework documentation and the range of offender services provided to offenders on conditional release.

Psychological Services: Person-years are determined on an inmate to psychologist ratio basis and as a by-product of the staffing formula used for Institutional Case Management Officers. The number of psychologists assigned to an Institution ranges from one to three depending upon the size of the inmate population.

Social and Community Affairs: Resource requirements are based on detailed work plans reflecting the programs offered in each institution. Generally a major institution will have 10-15 person-years allocated to social and community affairs.

The Offender Case Management person-year analysis for 1985-86 is summarized in Figure 39.

Figure 39: Offender Case Management Person-year Analysis

Regional Headquarters	**73**	73	71	71
Total Person-Years	**3,357**	3,275	2,912	2,797

E. Health Care

Objective

To provide inmates with access to medical, psychiatric and dental treatment at a quality consistent with currently accepted Canadian practices and standards on a voluntary and emergency basis or as prescribed by qualified medical practioners; to ensure that all institutions meet accepted standards for sanitation and hygiene.

General medical community standards are accepted as CSC's standards and the Service is advised by a Medical Advisory Committee which is comprised of representatives from the Canadian Medical Association, Canadian Psychiatric Association, Canadian Nursing Association, Canadian Dental Association and College of Family Practise.

Resource Summary

Approximately 7% of the Service's 1985-86 operating budget is for Health Care expenditures (compared with 7% forecasted for 1984-85). Of this amount, 94% is for personnel or professional and special services, including approximately $9 million for l'Institut Philippe Pinel for psychiatric services in the Quebec Region. Revenue in this activity for 1985-86 is forecast to be in the order of $900,000 for contracted psychiatric services provided to the provinces.

The actual expenditures for 1983-84 were 7% lower than the Main Estimates Provision.

	1983-84		
	Actual	Main Estimates	**Change**
Health Care	36,174	38,890	**(2,716)**

Description

Health Care Services: A total of 26 Health Care Centres (HCCs) located in S3 to S7 security institutions serve 41 institutions. Those institutions that cannot be provided with services due to their geographic remoteness from a HCC make arrangements with local clinics, hospitals and physicians in nearby communities. HCCs are organized and staffed to provide primarily outpatient and ambulatory services although a limited number of beds are set up for short-term bed care including post-operative care where hospital facilities are not required.

The HCC staff coordinate access to the full range of community medical services for diagnosis, treatment and rehabilitation when its own resources are not appropriate.

Psychiatric Services: Psychiatric services are provided on an inpatient and outpatient basis for all institutions. Short-term or minor problems may be handled in the institution by consultant psychiatrists and HCC staff, or professional staff from Regional Psychiatric Centres providing an outpatient service. Patients who require hospitalization or who may benefit from longer term care are transferred either to provincial facilities or to one of three Regional Psychiatric Centres located in the Pacific, Prairie and Ontario Regions. Quebec Region's psychiatric services are provided exclusively by l'Institut Philippe Pinel on a contractual basis. A 12 bed psychiatric unit has been opened in Dorchester institution (October 1984) to provide care to acutely mentally-ill inmates in the Atlantic Region and a 24 bed unit is planned for Saskatchewan Penitentiary (Prairies Region) for the care of chronically mentally-ill and developmentally handicapped inmates who are not able to function in the general population.

Performance Information/Resource Justification

The person-year/inmate ratio is forecast to increase and the cost per inmate is forecast to decrease in 1985-86 in terms of constant dollars.

Figure 42: Actual Forecast Health Care Person-Year/Inmate Ratio

Figure 43: Actual and Forecast Health Care Expenditures per Inmate

Health Care

Plans for 1985-86 include:

- developing national plans for handling the special health care needs of violent and aggressive inmates and inmates who are chronically mentally ill and developmentaly handicapped;
- ascertaining the viability and implications of consolidating Health Care Centres by geographical location;
- improving the present system of procurement and delivery of medication to inmates, by reducing inventory, wastage, dispensing and administration time; and
- establishing a data base which will identify both medical and psychaitric health care needs to serve as a logical basis for the planning for the provision of services.

Update on Previous Plans

Treatment Program for Violent and Aggressive Inmates: Treatment programs are currently in place in the Pacific and Prairies Psychiatric Centres. Expansion of the program may be affected by resource constraints.

Accreditation: To date one institutional Health Care Unit received accreditation from the Canadian Council on Hospital Accreditation (CCHA) and one Regional Psychiatric Centre was re-accredited. The Regional Psychiatric Centre Prairies will be surveyed by the CCHA during 1984-85.

Hygiene and Sanitation: A system to ensure proper hygiene and sanitation inspections at CSC institutions was developed and pilot testing was completed in 1982-83. The system requires quarterly inspections at each institution. These inspections are in addition to those which may be conducted by Health and Welfare. CSC will re-examine with Health and Welfare the sanitation standards by which institutions are inspected.

Health Care Services: The person-year requirements for Health Care Services are based on detailed work plans submitted by Health Care Centre managers in the field. These plans are based upon requirements for emergency coverage and the estimated workload created by the inmate population. These estimates are based upon projected costs for services and supplies and projected utilization per inmate based on historical data.

Figure 44: Summary of Workloads for Health Care Centres

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
General clinic				
Visits	759,000	725,000	709,603	629,958
Seen by physician	89,700	84,200	78,395	71,185
Hospitalization (hospital days)				
Health Care Centre	23,500	22,825	19,934	22,397
Other facilities	3,400	3,250	3,102	3,139

L'Institut Philippe Pinel Quebec	$284.	$273.	$260.	$246.

F. Technical Services

Objective

To provide on a timely basis and at acceptable quality and cost, food and clothing for inmates and staff in institutions, and all other material requirements together with supporting services including institutional maintenance and cleaning, transport, telecommunications and fire protection as well as distribution and disposal for all classes of stores and equipment; to design, construct and maintain Service-wide buildings and facilities according to the needs and priorities of the Service.

Resource Summary

The Technical Services Activity accounts for approximately 19% of the 1985-86 Correctional Service operating budget (compared with 18% forecasted for 1984-85) and administers 94% of the Service's capital budget. Revenue in this activity for 1985-86 if forecast to be in the order of $7,350,000 from the operation of inmate canteens. The revenue will equal the cost of purchases less a small amount for inventory build-up.

Figure 46: Activity Expenditures and Person-Years ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Technical services - general	161,908	121	135,212	121	97,045	119
Food services	33,333	292	33,007	282	27,407	292

Past Financial Performance

Figure 47: 1983-84 Financial Performance ($000)

The actual expenditures for 1983-84 were 1.5% lower than the Main Estimates provision.

	1983-84		
	Actual	Main Estimates	Change
Technical Services - General	97,045	111,445	(14,400)
Food Services	27,407	28,378	(971)
Institutional Services	14,289	12,129	2,160
Materiel Management	10,905	13,635	(2,730)
Engineering, Architecture and Properties	46,124	42,308	3,816
Telecommunications and Electronics	11,649	2,586	9,063
	207,419	210,481	(3,062)

The variation between the Estimates and actual expenditures in Technical Services - General and Telecommunication and Electronics sub-activities was due to a refinement in expenditure recording methods. Resources for the purchase and installation of telecommunication and electronic equipment, primarily PIDS, was included in the budget of Technical Services - General but actual expenditures were charged to the Telecommunications and Electronics sub-activity.

Description

Technical Services - General: This sub-activity manages the Activity, including major construction projects such as the building of new institutions and major renovations to older institutions.

Materiel Management: This sub-activity provides the acquisition, storage and issue of equipment and materials for all the activities in the institution, including the operation of the inmate canteen.

Institutional Services: This sub-activity provides housekeeping, clothing, and laundry service for inmates; as well as officers' uniforms, furniture and furnishings.

Food Services: This sub-activity provides meals for inmates and duty meals for staff.

Engineering and Maintenance: This sub-activity maintains and protects the lands and equipment, and manages the vehicle fleet, fire safety and energy conservation operations.

Telecommunications and Electronics: This sub-activity installs, tests and maintains electronic and telecommunications equipment. This group

is also responsible for research and development of electronic devices and systems which will make CSC operations more cost effective.

Performance Information/Resource Justification

The person-year/inmate ratio is expected to increase slightly, while operating cost per inmate in constant dollars is expected to remain stable, as illustrated in figure 48 and 49.

Figure 48: Actual and Forecast Technical Services Person-Year/Inmate Ratio

Figure 49: Actual and Forecast Technical Services Expenditures per Inmate

Technical Services

Plans for 1985-86 include:

- reducing the per inmate dollar value of the operational stores inventory by 15% compared to 1983-84 levels.
- completing the implementation of the preventive maintenance portion of the maintenance management system.
- reducing the per capita constant dollar value of rations by 3%; and
- continuing the planned implementation of the Perimeter Instrusion Detection System (PIDS) in major institutions. All installations are expected to be completed by 1986-87. These installations of PIDS will result in a net saving of $3.5 million per annum over the 15 year life cycle of the equipment and a saving of 269 person-years by 1987-88.

Update on Previous Plans

Food Services Management System: The development of a Food Service Ration Control System was completed in 1982-83 and has been implemented in all Regions. Studies are also under way to tie in a cost accounting system with the food ration system. Expenditures for rations in 1983-84 were 4% lower than those of 1982-83 in terms of 1981-82 constant dollars.

Material Management System (MMIS): During 1982-83 a new material management information system was pilot tested in the Quebec Region. This system was the forerunner of a national system of centralized procurement based upon computerized inventory and standarized items which has now been implemented nationally. Developmental work is continuing on the interface between the MMIS and Financial Systems (FINCON).

Maintenance Management System: The process of introducing the maintenance management system is continuing in all institutions. At present, 30 institutions are utilizing both preventive maintenance and uniform work order sub-systems, while virtually all of the remaining facilities have introduced the work order component of the system. It is anticipated that the information generated from this system will result in significant productivity gains over the next several years. The preventive maintenance program will not be operating in all facilities until 1986-87.

Perimeter Intrusion Detection Systems (PIDS): PIDS has been installed and is operating at Edmonton Institution, RPC Saskatoon, Matsqui, Millhaven, and Joyceville Institutions, and at the RPC Pacific. Installation work is in progress at Archambault and at Stony Mountain. Additionally, PIDS is being incorporated into the institutions under construction at Drummond, RRC Quebec, and the Saskatchewan Penitentiary SHU. The savings resulting from the implementation of PIDS will be significant, as the electronics systems will cost 40% less to operate than the manual guard tower system.

Planning and contractual work has been completed for Kent, Warkworth, Collins Bay, Saskatchewan Penitentiary, and Springhill for installation of equipment during 1984-85.

Material, Management, Food and Institutional Services: The major expenditure items are personnel, food and clothing. They are discussed below.

Personnel: The Materiel Management sub-activity is staffed in accordance with a review and analysis of the requirements of individual posts. The analysis has provided the Service with the standard for person-year requirements in institutions for this sub-activity. Criteria considered in establishing these requirements are the security classification, the capacity and the layout of the institution and other variables that affect workload such as the number of inmates supervised, the number of meals prepared, and the volume of supplies and uniforms handled. An important factor in determining these personnel requirements is that a large part of the work is carried out by the inmates.

Foods: In addition to providing meals for inmates, CSC provides duty meals for certain staff. The Service's farms provide an estimated 30% of the food consumed within its facilities. The costs of these products are charged to the food account on a transfer price basis and credited as revenue in the Education, Training and Employment of Inmates Activity (see page 41).

Clothing: The Service provides all clothing for inmates, and provides new and replacement uniforms to security guards.

Engineering and Maintenance: The responsibilities and expenditures of this sub-activity relate to the maintenance and operation of the physical facilities. For 1985-86 it is estimated that 773,000 square metres of facilities will be maintained and approximately $28 million of capital funds will expended on regular maintenance of existing facilities.

Technical Services-General: A major responsibility of this sub-activity is to control CSC's capital expenditures, particularly new construction and renovation projects related to the Inmate Accommodation Plan. The Estimates for this sub-activity include the proposed construction and equipment expenditures of approximately $167 million. Details of the capital expenditures are provided in Section III of this Plan (see page 68). Additional information on the Inmate Accommodation Plan can be found in Section I, pages 9 and 21.

G. Administration

Objective

To ensure effective use is made of CSC resources by providing management information and control systems, program and operational analysis and advice to management and by implementing systems for financial visibility, accountability and control; to ensure effective use is made of CSC person-year resources by providing advice to management on fulfilling their personnel management responsibilities and by providing services in respect of manpower planning and development, recruitment, job evaluation and staff relations; to provide effective and efficient administrative services.

Resource Summary

The Administration Activity accounts for approximately 9% of the 1985-86 Correctional Services operating budget (compared with 10% forecasted for 1984-85). Revenue for this activity in 1985-86 is forecast to be in the order of $1,400,000 and includes rental from staff houses, refund of previous years expenditures and miscellaneous revenue.

Figure 50: Activity Expenditures and Person-Years ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Administration	**22,686**	**430**	22,068	415	21,978	449
Personnel	**10,492**	**229**	10,909	228	10,674	238
Staff Training and Development	**7,796**	**117**	8,949	116	7,776	133
Finance	**17,615**	**327**	20,393	319	17,382	334
	58,589	**1,103**	62,319	1,078	57,810	1,154

Past Financial Performance

Figure 51: 1983-84 Financial Performance ($000)

The actual expenditure for 1983-84 was 13.8% higher than the Main Estimates provision.

	1983-84		
	Actual	Main Estimates	Change
Administration	21,978	17,561	4,417
Personnel	10,674	11,612	(938)
Staff Training	7,776	8,043	(267)
Finance	17,382	13,573	3,809
	57,810	50,789	7,021

The variance between the actual and estimates was due to increased salary costs for casual and part time employees required to respond to increased workload in Finance and Administration sub activities for items such as: inmate accounting transactions due to increased inmate population and peformance of work previously carried out by Department of Supply and Services (DSS); additional workload associated with compliance to the provisions of The Access to Information Act and the Privacy Act; DSS service charges in excess of the budgetary base; an under statement of the provision for employee benefit plans and the subsidization of tobacco tax. (The subsidizing of tobacco tax will cease effective 1 April, 1985.)

Description

Administration: This sub-activity manages national, regional and institutional administrative support systems including records management, directives management, forms management, word processing, translation services, procedures and processes related to access to information and privacy legislation, as well as sentence administration and admission and discharge services for inmates.

Personnel: This sub-activity administers the personnel system throughout the Service, including staff relations, classification and compensation, staffing, official languages and equal opportunities coordination. The most significant issue with regard to the personnel sub-activity is the continued effort to improve personnel management in the Service.

Staff Training and Development: This sub-activity manages the manpower planning system and operates a national Staff Induction Centre and five regional colleges which provide initial and refresher training for correctional officers and various types of training and development courses for other staff.

Finance: This sub-activity administers the Service's financial support systems, including the design and maintenance of general and cost accounting systems, and provides regular financial analyses and advice on existing and new program proposals.

Performance Information/Resource Justification

The Administration person-year offender ratio and cost per offender are displayed in Figures 52 and 53.

Figure 52: Actual and Forecast Administration Person-Year/ Offender Ratio

Figure 53: Actual and Forecast Administration Expenditure per Offender

Administration

Plans for 1985-86 include:

- developing and implementing plans leading to the automation of administrative and personnel systems and processes;
- initiation of a program to reduce controllable absenteeism;
- improving the financial function of providing controllership analysis and advice; and
- attaining a female representation in CSC of 24% of the total workforce with emphasis on increasing female security officers to 8.5%.

Update on Previous Plans

Financial and other Management Systems: CSC has improved the Financial management system through automation with the implementation of a computerized financial information and control system (FINFO/FINCON) in all institutions in 1982-83 and in District Parole Offices in 1983-84. The development of other information systems, particularly those which focus on needs at the institutional level, are proceeding on schedule. Pilot testing of several sub-systems is being conducted during 1984-85.

Staff Training: A new training program for supervisors has been developed and an orientation program for institutional case workers is under development. National training programs for correctional officers have been standardized. Training programs have been implemented for courses in crisis management, leadership, supervisor training and middle management development program.

Female Security Officers: Through the use of exclusion orders and an internal policy of zero outside recruitment of males for positions in S1 to S5 security level institutions and other initiatives the Service increased the percentage of female security officers to 6% by March, 1984.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Correctional Services expenditures by object are presented in Figure 54

Figure 54: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	372,907	358,384	318,841
Contributions to employee benefit plans	52,326	46,947	47,123

Transfer payments	1,417	1,350	1,029
Total expenditures	795,832	757,583	651,919

2. Operating Expenditures

For fiscal year 1985-86 it is estimated that operating expenditures including grants and contributions will be $11 million over the 1984-85 forecast. This represents an increase of 1.8%. However, when the effects of inflation are removed, a decrease of 3% in constant dollars is forecast.

Figure 55: Operating Costs in Current and Constant Dollars ($000)

	Current Dollars				Constant (1981-82 Base)	
	Personnel Costs	Other Costs	Total Operating	% Change	Total Operating	% Change
1983-84 Actual	369,615	167,629	537,244	--	459,344	-
1984-85 Forecast	409,725	206,360	616,085	14.7	500,877	9
1985-86 Estimates	**429,702**	**197,361**	**627,063**	**1.8**	**485,974**	**(3)**

3. Personnel Expenditures

CSC is a labour-intensive organization, with personnel costs (including statutory contributions to employee benefit plans) constituting over 68% of total operating costs.

Overall efficiency is measured using person-years per offender. However, when analyzing the trends it is important to consider the mix of inmates and offenders subject to community supervision. The resources required to staff an institution do not change significantly with fluctuations in the inmate population. Therefore, to some extent the unit costs per inmate are not subject to direct control in the shorter term. However, planning over the longer term can affect the ratio. Although the costs of community supervision are less than the costs of incarceration, a significant change in the percentage of offenders under supervision is required to change the ratio. Therefore, the relationship between person years per offender and absolute efficiency is complex. However, the ratio still indicates meaningful trends.

Figure 56 demonstrates the general downward trend in the person-year/offender ratio required to reach the CSC goal of .600/1 by 1990. This figure reflects short-term increases that may arise as a result of the need to hire staff for new or expanded institutions before they are operating, or maintaining staff levels at an old institutions until all inmates are transferred out.

Additional person-year information is presented in Figures 57 and 58.

Figure 56: Offender Population and Person-Years

	Average Inmate Population	Avge. No. of Parolees and M.S. Cases*	Total Offender Population	Staff Person-Years	P-Y/ Offender Ratio

NOTE: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

4. Capital Expenditures

Figure 59 presents an analysis of total CSC capital expenditures.

Figure 59: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Other	239,959	240,466	20,802
Total	1,027,000	1,027,130	816,747
	1,417,450	1,350,580	1,029,395

B. Cost Analysis

Net Program Cost

CSC's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the Program on a full cost basis. Also to be taken into consideration are revenues generated by the Program that are credited to the Consolidated Revenue Fund. These items have the effect of increasing Program costs by approximately .2%.

Figure 62: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Cost	Total Cost	Deduct Revenue	**1985-86 Total Net Cost**	Forecast 1984-85
Planning and Management	21,121	964	22,085	---	**22,085**	22,091
Custody of Inmates	149,202	10,278	159,480	---	**159,480**	151,207
Education, Training and Employment of Inmates	73,084	2,249	75,333	20,075	**55,258**	62,551
Offender Case Management	161,393	9,637	171,030	1,150	**169,880**	168,292
Health Care	43,537	1,606	45,143	900	**44,243**	43,745
Technical Services	120,096	4,176	124,272	7,350	**116,922**	111,008
Administration	57,213	3,212	60,425	1,400	**59,025**	63,015
	625,646	32,122	657,768	30,875	**626,893**	621,909

The adjustments made to the voted budgetary expenditures to arrive at total net cost involve:

- the removal of capital expenditures ($168,769,000);
- the removal of transfer payments ($1,417,450);
- the inclusion of a depreciation charge on estimated fixed assets ($14,090,000);
- the inclusion of services provided without charge by Public Works ($6,500,000), Treasury Board ($7,685,000), and other departments ($3,847,000); and
- the deduction of all forecast revenues generated by the Program credited to the Consolidated Revenue Fund ($30,875,000).

C. Cost of Maintaining Offenders by Security Level

The following table is a four year summary of direct institutional costs per offender (excluding capital).

1985–86 Estimates

Part III

Expenditure Plan

759

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Department of Communications

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. A table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $340,168,000 in support of the 1985-86 Communications and Culture Program. This amount includes $10,000 of non-budgetary expenditures for loans to institutions and public authorities in Canada pursuant to Section 29 of the Cultural Export and Import Act. The remaining expenditures, estimated at $13,226,400 for pensions and other employee benefits, the Minister's salary and motor car allowance and the Government Telecommunications Agency will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Communications and Culture Program		
1	Operating expenditures	130,890	127,737
5	Capital expenditures	13,879	24,388

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

For 1985-86 the Communications and Culture Program's highlights are:

- to continue to support the L-SAT program in conjunction with the European Space Agency (ESA) at a projected cost of $20.6 million (see pages 22 and 36);

- to assist the Satellite Prime Contractor in the development of Advanced Payload Systems (SPCDAPS) at a projected cost of $4.5 million (see pages 22 and 36);

- to continue to administer the Special Program of Cultural Initiatives (SPCI) that financially assists cultural organizations and institutions to improve their corporate management, to upgrade their facilities, to support projects with the potential offered by new technologies and to support special national activities at a projected cost of $29 million and ten person-years (see pages 22 and 59);

- to provide overall management and coordination of the Department's participation in the development, negotiation and implementation of the Economic and Regional Development Agreement (ERDA) with the province of Manitoba at a projected cost of $2.2 million and three person-years (see page 54);

- to implement the first full year of operation of the Canadian Workplace Automation Research Centre (CWARC) at a projected cost of $8.2 million and 59 person-years (see page 32);

- to expand the David Florida Laboratory (DFL) to meet the growing requirements of Canadian industry for the environmental testing of different types of spacecraft at a cost of $3.9 million (see page 36);

- to manage and support international collaboration activities in the field of information communications at a projected cost of $1 million and three person-year (see page 32);

- to implement the Telecommunications Policy Strategy (see page 54);

- to negotiate and establish bilateral film and video tape co-production agreements with several countries (see page 54);

- to assist the Canadian periodical industry and to ensure that Canadians at home and abroad have access to Canadian publications through a postal rate subsidy at a cost of $55.1 million (see page 59);

- to ensure the protection of creator's rights by finalizing draft copyright legislation in collaboration with the Department of Consumer and Corporate Affairs for Cabinet approval and parliamentary consideration (see page 58);

- to complete the Bridging Phase for MSAT at a projected cost of $1 million and seven person-years (see page 36); and

- to include the payments of $81.8 million in 1985-86 to the Canada Museums Construction Corporation Inc. for the operation of the corporation and for the construction costs of the new National Gallery and the National Museum of Man (see page 73).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

Activity	Estimates 1985-86 Expenditures	Estimates 1985-86 Revenue Credited to Vote	Estimates 1985-86 Net Expenditures	Forecast 1984-85 Net Expenditures	Net Change	For Details See Page
Research	47,310	5,283	42,027	47,500	(5,473)	28
Technology Applications and Industry Support	49,667	-	49,667	67,347	(17,680)	33
Government Telecommunications Agency Revolving Fund[1]	170,909	169,398	1,511	1,776	(265)	37
Management of the Radio Frequency Spectrum[2]	49,368	630	48,738	46,765	1,973	43
Policy Development and Coordination	15,032	361	14,671	13,007	1,664	50
Cultural Affairs[3]	94,602	-	94,602	93,612	990	55
Departmental Administration	20,391	-	20,391	20,058	333	60
Total Departmental Operations	447,279	175,672	271,607	290,065	(18,458)	
Payments to Canada Museums Construction Corporation Inc.[4]	81,787	-	81,787	62,000	19,787	73
Total Program	529,066	175,672	353,394	352,065	1,329	
Person-years	-	-	2,397	2,369	28	

1 On an accrual basis this amounts to expenditures of $171,000 and revenue of $171,000. For reconciliation of the cash and accrual bases of presentation see page 37.

2 This activity will earn approximately $35 million, credited to the Consolidated Revenue Fund, based on 1984-85 fee schedules (see page 43).

3 It should be noted that the expenditure figure includes $10,000 for loans to institutions and public authorities in Canada.

4 In 1985-86 the resonsibility for payments to the Canada Museums Construction Corporation Inc. will be transferred from Public Works Canada to the Department of Communications.

Explanation of Change: The major items contributing to the net increase of $1.3 million (0.4%) in the 1985-86 requirements over the 1984-85 forecast are:

	$ million
• increase to the 1985-86 cash requirement as a result of an adjustment to the cash flow for each of the three remaining years of construction for the National Gallery and Museum of Man;	19.8
• increase in funding for the Special Program of Cultural Initiatives;	13.5
• increase in the L-SAT program;	4.0

• funding for the various ERDA projects;	3.7
• decrease in funding for the Telidon program;	(10.1)
• decrease in funding for the Book Publishing program;	(9.9)
• decrease in funding for the Special Recovery Capital Projects program;	(6.9)
• decrease in funding for Satellite Prime Contractor;	(5.2)
• decrease in funding for the Office Communications Systems program; and	(3.8)
• other miscellaneous adjustments.	(3.8)

Explanation of 1984-85 Forecast: The 1984-85 Forecast (which is based on information available to management as of October 31, 1984) is $352,065,000 or 7.0% higher than the 1984-85 Main Estimates of $328,909,000 (Extracts from Part II of the Estimates, Page 4). The difference of $23,156,000 reflects the following major items:

	$ million
• rephasing of funding for the Telidon program;	6.2
• additional funding for MSAT;	3.4
• additional funding for the Special Program of Cultural Initiatives;	1.3
• funding for the Canadian Workplace Automation Research Centre;	8.5
• expansion of the David Florida Laboratory; and	1.6
• other miscellaneous increases.	2.2

B. Recent Performance

1. Highlights

In addition to the plans set out in the 1984-85 Expenditure Plan, two major initiatives which gained prominence and focus during 1984-85 were:

- the preliminary stages of implementation of the Canadian Workplace Automation Research Centre (CWARC) (see page 22); and

- a Regional Dimension Action Plan designed to strengthen existing regional and headquarters collaboration in the formulation of strategy and the delivery of services (see page 22).

Major achievements within the Communications and Culture Program for 1983-84 include the following.

- Early work in computer graphics, image compression, programming languages, etc., led to the graphics coding scheme that became the key for Canada's videotext/teletext concept, Telidon. In 1983, the updated Telidon format became the basis for the U.S./Canada national standard (NAPLPS) and has been accepted for recommendation by the International Telegraph and Telephone Consultative Committee (CCITT) as an international standard. This accomplishment has spearheaded national and international market thrusts for equipment and services.

- The Elie/St-Eustache field trial in rural Manitoba successfully demonstrated the use of fibre optic technology to deliver integrated services to the home; television, FM radio, telephone and data (Telidon). This experience has contributed to place Canada in the forefront of developments using fibre optic technology.

- Surface Acoustic Wave (SAW) and Vertical double-diffused Metal Oxide Semiconductor (VMOS) device technology was successfully transferred to Canadian industry. Efficient, low cost digital microprocessor-based voice coding technology was licenced to industry through CPDL; and, reproducible 1 micron Gallium Arsenide Field Effect Transistor (FET) processes were established, making possible high frequency microwave devices for higher capacity space communication systems.

- With support from the Program, Canadian firms responded on schedule to the following export opportunities and won the resultant contracts: Brazilsat, Intelsat VI receivers and channel amplifiers and Earth stations for China.

- A study was commissioned to assess the uses of telecommunications in the Canadian health care system. The study identified four applications where advanced telecommunications can contribute towards the efficient delivery of health care.

- The following studies were completed and made available to appropriate readership within government: The Canadian Telecommunications Industry Export Market Opportunities in the Eighties; the Canadian Communications Sector: An Environmental Assessment; and An Economic Analysis of Enhanced Services. In addition eight studies for a larger audience were completed and published in 1983-84 or will be published in 1984-85.

- Specifications were released for the certification of cellular radio equipment, including a North American compatibility standard and one for an emergency locator transmitter.

- The Department developed policies for the provision of cellular mobile radio services and management of the public process leading to the awarding of radio licences in all regions of Canada.

- The Department authorized 42 AM broadcast stations to conduct experimental AM stereophonic transmissions.

- Revenue of approximately $17.5 million was received for the issuance of 63.5 million licences, together with fees amounting to $925,000 for interconnect application assessments, testing certification and labels, $115,000 for radio equipment application assessments, testing and certification and $579,000 for ship radio inspections.

- The Department coordinated a large-scale World Communications Year project with both a static and mobile display which has been requested for international display.

- The ongoing operations of spectrum management were maintained with less than a 0.5% variance in the utilization of financial resources and a 0.6% variance in person-year resources.

- The Department successfully secured for Canada the numbers of orbital positions and frequency channels required to support the Canadian direct-broadcasting satellite service industry.

- Signatures were obtained on film and television co-production agreements with France and Belgium, and negotiations were conducted with the United Kingdom, Italy, Spain, Australia, Israel, Japan, Algeria and Mexico.

- The Department also developed and implemented a Federal-Provincial Strategy reflecting Communications and Culture together with a Regional Dimension Action Plan promoting regional sensitivity with regard to Policy Development and Program Delivery.

- The Department implemented some of the major thrusts of the Broadcasting Strategy, including issuance of the document entitled "Building for the Future", which provided guidelines for the CBC on its policy orientation and activities; implementation of the Canadian Broadcast Program Development Fund; and follow-up on the Northern Broadcasting Policy.

- The Department developed a new National Film and Video policy, including major improvements to the operation of the Canadian Film Development Corporation (CFDC), now called Telefilm Canada, and the National Film Board of Canada.

- The Department developed a proposal to obtain Government's approval to establish a federal program that would protect travelling exhibitions valued at $1 million or more, that are hosted by Canadian museums, galleries, libraries and archives.

- The Department developed a proposal for a Canadian Library Information Network.

- The Department also emphasized projects to modernize the government's telecommunications network, by taking advantage of advanced technology now available from the common carriers and the telecommunications industry, and to develop software techniques and operating procedures that would facilitate communication between dissimilar word processors currently in place in the government.

2. Review of Financial Performance

Figure 2 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84				
	Actual			Main Estimates	Change
	Gross Expend-itures	Revenue Credited to Vote	Net Expend-itures		
Research	35,480	5,295	30,185	31,534	(1,349)
Technology Applications and Industry Support	53,110	-	53,110	54,566	(1,456)
Government Telecommunications Agency Revolving fund	131,198	129,989	1,209	1,601	(392)
Management of the Radio Frequency Spectrum	44,871	579	44,292	43,050	1,242
Policy Development and Coordination	13,230	-	13,230	12,343	887
Cultural Affairs[1]	80,405	-	80,405	75,068	5,337
Departmental Administration	17,331	-	17,331	17,073	258
	375,625	135,863	239,762	235,235	4,527

1 It should be noted that the expenditure figure includes $5,000 for loans to institutions and public authorities in Canada.

Explanation of Change: The difference between 1983-84 actual expenditures and Main Estimates of $4,527,000 is comprised of the following major items:

	$000
• additional Supplementary Estimates;	31,762
• roll-overs of major projects;	(24,537)

- budget reduction in the Cultural Affairs Activity; and (1,960)

- lapse in the Grants to Moveable Cultural Properties. (680)

During 1983-84, the Department received additional resources of $31,761,663 through Supplementary Estimates of which major items included were:

	$000
• three projects under the Special Recovery Capital Projects Program (SRCPP) (see page 29 and 56);	7,800
• additional resources for L-SAT and MSAT (see page 34);	1,430
• approval of a two-year extension of the Telidon Program, including 32 person-years (see page 34);	9,500
• the continuation of the Special Program of Cultural Initiatives, including 6 person-years (see page 56); and	10,810
• the sustaining grant to the Fathers of Confederation Building Trust (see page 56).	1,034

There were several projects undertaken during 1983-84 that required a rephasing of their cash flow and resulted in $24,537,000 being rolled-over to future years. Major items included in this amount are:

	$000
• Telidon Exploitation Program (see page 34);	5,580
• L-SAT Program of the European Space Agency (see page 34);	5,102
• Office Communications Systems Program (see page 34);	1,456
• Satellite Prime Contractor Development of Advanced Payload Subsystems (see page 34);	1,525
• Canadian Workplace Automation Research Centre (SRCPP) (see page 29); and	4,100
• Special Program of Cultural Initiatives (see page 56).	4,835

C. Background

1. Introduction

The Communications and Culture Program encompasses activities that range from the information carriage and storage technologies of modern communications to the artistic and cultural communities that produce the content. The Program plays a practical role in developing new telecommunications, space and information technologies; supporting industries that apply these technologies; managing the radio frequency spectrum; planning and coordinating government telecommunications; and administering special programs to support selected cultural industries. In addition, the Program plays a policy role in developing national telecommunications broadcasting and related policies, in developing positions to protect and promote Canadian interests in international negotiations regarding equipment standards, and in use of the radio frequency spectrum, including geostationary orbits. The Program also determines and enforces policies and regulations to safeguard the radio frequency spectrum, develops national cultural policy, and analyzes social policy issues arising from the application of communications, space and information technologies.

Other government departments and agencies make constant and substantive demands on the Communications and Culture Program. The work of the Government Telecommunications Agency involves defining and satisfying the communications needs of other government departments. Spectrum Management services are essential to the assessment of broadcasting applications by the CRTC, the inspection of ship radio stations on behalf of the Department of Transport and the provision of ionosonde data to the Department of National Defence. Broadcasting policy requires coordination with the Canadian Radio-television and Telecommunications Commission (CRTC) and the Canadian Broadcasting Corporation (CBC). Research and development work in the domains of both communications research and space involves interministerial agreements with the Department of National Defence and other departments for which the Department of Communications (DOC) carries out many projects. Liaison with industry and universities includes participation in programs of other government departments such as the Program for Industry/Laboratory Projects (PILP), the Unsolicited Proposals Program (UP) and the Industrial and Regional Development Program (IRDP). Space-related activities must be coordinated with the ten federal ministries that make up the Interdepartmental Committee on Space.

A number of government departments work closely with the Cultural Affairs component of the Communications and Culture Program. Revenue Canada has delegated to DOC responsibility for administering the Canadian Film Certification Program. The Cultural Statistics Program is directed and funded jointly by Statistics Canada and the Communications and Culture Program. There is also an agreement with the Canada Post Corporation on rate structures and payment of costs associated with mailings of certain categories of mail. The Program also works closely with the Department

of External Affairs to ensure that links are established with international communities and authorities and that substantive Canadian contributions are made at international fora. The Program also advises the Minister on the achievement of national cultural objectives by cultural agencies and boards.

2. Legal Mandate

The primary legislative authorities that form the basis for the Communications and Culture Program are to be found in the Radio Act, the Broadcasting Act, the Department of Communications Act, the Telegraph Act, the National Transportation Act, the Telesat Canada Act, the Railway Act, Part II and III of the Broadcasting Act in relation to the Canadian Radio-television and Telecommunications Commission and the Canadian Broadcasting Corporation, the Canada Council Act, the National Library Act, the National Arts Centre Act, the National Museums Act, the Public Archives Act, the National Film Act, the Cultural Property Export and Import Act and the Canadian Film Development Corporation Act.

3. Program Objective

The objective of the Communications and Culture Program is "to develop policies, programs and cooperative arrangements which achieve Canada's social and economic objectives for communications and culture and to foster the orderly development and operation of communications and culture for Canada in both the domestic and international spheres."

4. Program Organization for Delivery

Activity Structure: The Communications and Culture Program comprises seven Activities. Each of these Activities is divided into areas, as presented in Figure 3.

Research and Technology Applications and Industry Support are the two Activities that develop technologies, provide advice to other Activities of the Department and to other departments and agencies and promote exploitation of these technologies by industry. Management of the Radio Frequency Spectrum manages both the utilization and development of the radio frequency spectrum nationally and through international agreements and regulations protects Canada's rights regarding use of the spectrum. The Government Telecommunications Agency provides for the utilization and regulation of telecommunications facilities. Policy Development and Coordination ensures the orderly and efficient development of the telecommunications infrastructure, the application of advanced technologies, and the introduction of new services for telecommunications and culture as fields of endeavour, both domestically and abroad. Cultural Affairs develops national cultural policy and ensures that the cultural milieu benefits from technological advances in the fields of communications and information. The Departmental Administration Activity contains management and support services.

Figure 3: Activity Structure

Organization Structure: Figure 4 relates the Program's organizational structure to its activities by showing the 1985-86 resources required.

The costs for the Research Activity shown under the Personnel and Administration Sector represent the sub-activity of the Communications Research Centre Support Services, which is administered by the Director General Personnel and Administration. The costs for the Technology and Industry Support Sector include those costs associated with the David Florida Laboratory Support Services, which is administered by the Director General Personnel and Administration. The Personnel and Administration Sector also includes costs for both the Minister's and Deputy Minister's offices.

The Spectrum Management Sector manages the radio frequency spectrum by providing both centralized functions where appropriate and decentralized operations in regional, district and sub-offices in five regions (see Section III, page 76 for a list of field offices). The Government Telecommunications Agency has representatives located in six of these offices. These offices provide the primary point of contact to the

general public for all of DOC's programs and services. In addition to ensuring accessibility by the public, the non-spectrum operations of the activity ensure that regional perspectives are appropriately considered by the Department in the development of economic, social and cultural policies. Within the area of non-spectrum operations are the functions related to the certification and testing of terminal equipment for direct attachment to the federally regulated telecommunications network.

Figure 4: Resources by Organization/Activity ($000)

								Activity Total
Research (512 P-Y)			30,804				11,223	42,027
Technology Applications and Industry Support (138 P-Y)		47,765					1,922	49,687
Government Tele-communications Agency (218 P-Y)		1,511						1,511
Management of the Radio Frequency Spectrum (975 P-Y)				48,738				48,738
Policy Development and Coordination (177 P-Y)	14,671							14,671
Cultural Affairs (88 P-Y)	285					94,317		94,602
Departmental Administration (297 P-Y)					3,982		16,409	20,391
	14,956	49,276	30,804	48,738	3,982	94,317	29,554	271,627

Note: This table does not include the payments to the Canada Museums Construction Corporation Inc.

D. Planning Perspective

1. Environment

The environment in which the Communications and Culture Program operates is characterized by:

- rapid technological change;
- a sharp growth in demand for information goods and services;
- increasing competition among suppliers, both domestically and internationally; and
- constant change in Canada's social, economic and cultural life.

Microelectronics, satellites, fibre optics and digital switches have combined to greatly increase the amount of information that communications systems can store and transmit at a given cost. These developments have occurred against a background of rising demand for information goods and services. To a large extent, Canada has become an "information society;" an increasing number of jobs involve the creation and processing of information, rather than the production of physical goods.

In Canada, there is continual demand for new information products and a high growth rate in industries that serve this market. Office automation, for example, is essential to increased productivity. In the home, technologies like Telidon will change the way television is used by making it a complete information, entertainment and education centre. Satellites will extend the benefits of these new telecommunications services to rural and remote parts of the country.

While these developments promise many opportunities for Canadians, they also pose new challenges to ensure that automation and the new information and communications technologies contribute to, and form part of the natural evolution of Canadian cultural life. A high level of support for Canadian cultural activity and continuous content creation is required to take advantage of the rapidly expanding and changing communications environment. The very technologies that open the way for Canadian creators to global markets conversely open the Canadian market to foreign cultural products. The challenge is to increase the quality of Canadian cultural products while taking the fullest possible advantage of communications technologies to capture a greater share of the market both within Canada and abroad.

Developments in the environment have thus increased both the demands placed upon the Communications and Culture Program and its workload. Communications, information and space technology research and development, in addition to supporting other Activities of the Department, provide

essential support to the growth of high-technology industries in Canada. Industrial support programs aimed at exploiting the applications of new technologies must continue to be developed to assist in the maintenance and evolution of these industries.

The task of developing policy to ensure the orderly and efficient evolution of the Canadian communications system, coupled with a concerted effort to foster Canadian cultural activities, becomes ever more complex in an environment of increasing competition and rapid technological innovation. The social implications of new communications and information technologies must also be examined to determine their growing impact on Canadian life. Many of these factors have also placed increasing demands on the Program's operational responsibilities for regulating the radio spectrum and planning government telecommunications, as Canadians everywhere avail themselves of the growing numbers of products and services spawned by technological innovation.

2. New and Continuing Initiatives

The Department has a number of existing initiatives. Figure 5 displays the historical and estimated costs of the major existing initiatives.

Figure 5: Cost of Existing Initiatives ($000)

Initiatives	1985-86		Expenditures to March 31, 1985		Total Project Cost	
	$	P-Y	$	P-Y	$	P-Y
L-SAT	20,590	-	64,113	-	93,093	-
SPCDAPS	4,525	-	8,475	-	13,000	-
CWARC	8,183	59	3,308	26	N/A	-
SPCI	29,228	10	21,143	16	N/A	-
Reg. Rep.	2,420	47	see page 46		N/A	-

Existing major initiatives supported by the Communications and Culture Program are:

Large Satellite Program (L-SAT): Under the terms of an Agreement of Cooperation signed in 1979 by the European Space Agency (ESA) and the Government of Canada, Canada actively participates in ESA's activities. The purpose of the L-SAT (now known as Olympus) Program is to develop a cost-effective multipurpose commercial satellite platform designed to accommodate a range of future telecommunications space missions. Launch of Olympus I is targeted for 1987, with mission activities designed to promote new services scheduled through 1992. National contributions are

based on each country's expected industrial return. Currently estimated at 11% for Canada, these contributions will be adjusted one year after launch to reflect actual returns. Canadian industry will benefit by being able to use the Olympus platform for domestic and possible export programs, as well as through follow-on sales of subsystems and components. Canadian companies are already strengthening their ties with the European space industry as a result of the Olympus work. The anticipated return to Canadian industry is 58% of Canada's contribution during this development; it could be many times the original investment through subsequent commercial sales of the platform (see page 36).

Satellite Prime Contractor Development of Advanced Payload Subsystems (SPCDAPS): This development program, extending from October 1983 to March 1986, was designed to consolidate the Prime Contractor's capabilities by developing specific satellite subsystems and components that will be required in the next generation of communications satellites for both export and domestic use. The program focuses on antennas, receivers, solid state power amplifiers, and design support, which provides essential prime contractor capabilities such as mission planning and analysis. The project areas were selected to provide the maximum potential industrial impact for the government funds invested. In total, the Prime Contractor expects some $140-160 million annually in export and domestic sales of satellites and subsystems, with a $13 million DOC development program contributing directly to the success of the marketing goal. This program is estimated to provide 300 person-years of direct private sector employment during its 30 months of operation, including 120 person-years for highly skilled engineers (see page 36).

Canadian Workplace Automation Research Centre (CWARC): The construction of a research laboratory dealing in all aspects of office automation was approved in 1983-84. While the construction of the centre was completed in 1984-85, 1985-86 will be its first complete year of operation. It is a major initiative in both its unique field of application and its relationship with industry. The Centre will be the first laboratory in Canada devoted exclusively to workplace automation research in all of its aspects and will employ up to 40 persons on rotation from industry and Canadian universities (see page 32).

Special Program of Cultural Initiatives (SPCI): This program was established in 1980 to respond to urgent needs of Canadian non-profit artistic and cultural organizations. Through this program the Department supports the cultural community in the pursuit of artistic excellence and financial stability (see page 59). This special program was the subject of a program evaluation in 1983-84 (see page 27).

Regional Representation (Reg. Rep.): In May 1983, the Department implemented a Regional Dimension Action Plan designed to strengthen existing organizations and programs in the regions. The three primary areas of activity are Policy, Economics and Public Relations/Information (see page 49).

3. Program Effectiveness

Criteria for measuring the effectiveness of the Communications and Culture Program must be related to its basic objective, which is "to develop policies, programs and cooperative arrangements which achieve Canada's social and economic objectives for communications and culture and to foster the orderly development and operation of communications and culture for Canada in both the domestic and international spheres."

The criteria for measuring the effectiveness of orderly communications development, particularly with regard to technology, are to examine those technologies that:

- have left the laboratory and have been applied and exploited by Canadian industry, or
- have provided solutions to problems hampering the orderly development of communications for Canada, or
- have resulted in significant, recognized increases in knowledge within the space, communications or information sciences.

Germane to the subject of effectiveness criteria for the development and application of technology is an appreciation of both the time frames and the "discovery" environment that characterize the development milieu. A project moves through several phases of a cycle, often spanning many years, as it moves from the laboratory through field trials, industrial applications testing, and finally into the market launching of a new product or service. Provision of applications testing opportunities and the fostering of competent, competitive Canadian firms with a reputation for advanced technological expertise are principal means of advancing technology.

Some of the achievements related to technological applications and support to industry are briefly described below:

Office Communications Systems Program: This program has been ongoing since late 1980; Phase I of the program (research and planning) began in late 1980 and ended in early 1982. In phase II, from 1982 to 1986, major field trials are taking place in five federal depatments. This $12 million program is, in a sense, introducing the same kinds of automated operations into five places, but the settings are very different. They involve different kinds of administration, policy making, communication between points within headquarters of the field trial sites, and between their headquarters and field operations. For the similar processes, different software, different hardware and different media of communications are being used. The vendors conducting the trials represent different philosophies and emphases, and the management of the departments - their traditions, experience, policies, routines and

priorities - are naturally different also. The evaluation of the results for each trial will be no less interesting than the comparison of the results from the five separated, simultaneous trials.

Questions being addressed include what the new technology can do to increase effectiveness, efficiency and productivity in the Canadian office; the user needs that industry must meet; how the office processes will be affected by the introduction of the new technology, such processes as information gathering and storage, research, decision-making, production control, marketing, policy administration and organization; what effect the modern office will have on the people who work in it; and how the Canadian electronics industry will meet the new demand at home and compete successfully abroad.

Satellite Prime Contractor Development of Advanced Payload Subsystems (SPCDAPS): This program fosters the development of expertise and technology as well as providing for non-recurring engineering costs and bid support to promote the capture of domestic and export sales opportunities. The design and development work fostered by the Department is primarily directed at enhancing prime contractor capabilities in the areas of satellite conceptual design, design verification, mission analysis, advanced concepts assessment, and the generation of a communications satellites systems data base accessible by the Department.

Criteria for measuring the orderly operation of communications for Canada include the ability to offer use of the radio frequency spectrum to present and future licencees. The demand for use is constantly increasing yet the spectrum is a limited resource. In accordance with international agreements, Canada has divided the spectrum into eight frequency bands that can be allocated to licencees. These frequency bands range from 3 kHz to 300 GHz. The number of individual frequency assignments within those bands may increase as a result of technological change or international agreement. For the most part, DOC must manage the limited spectrum to ensure that the increasing demand is met. This responsibility includes, for example, ensuring that the number of non-broadcasting radio stations can continue to rise in response to demand without unnecessarily disrupting existing users.

Figure 6 demonstrates the rising number of licensed stations per frequency band. Without suggesting that each band supports a specific number of stations, the graph is indicative of the burgeoning utilization of a limited resource and of the associated advances in spectrum planning, engineering capabilities, and quality control required to ensure that the demand is met and the level of quality maintained. The graph displays the growth in the number of all classes of licensed stations except General Radio Services (GRS) or Citizen's Band (CB). The GRS figures were excluded because their sheer volume would distort the data.

Figure 6: Average Number of Radio Stations per Frequency Band

The Spectrum Management Activity has developed "pollution" indices that provide an indication of the quality of the spectrum; that is, they are indicative of the amount of interference caused to other users of the spectrum and/or adherence to the regulations governing utilization of the spectrum. While these indices have not been refined to a formal performance indicator they are used on an operational basis to monitor and maintain the quality of the spectrum. Additional work is being undertaken to define spectrum quality at the conceptual level in order to develop a more refined and yet comprehensive "quality of service" indicator.

Assessment of the effectiveness of the Communications and Culture Program is also achieved through the planned and cyclical evaluation of the Department's twenty-seven program evaluation components. Major evaluation studies currently underway include Telidon, Office Communications Systems and the Postal Subsidy. In addition, evaluation studies are planned for Space Technology, Industry Support, Management of the Radio Frequency Spectrum and the Government Telecommunications Agency.

Three program evaluations were completed in 1983-84 and their findings are summarized below.

Book Publishing Development Program: The criteria for evaluating the success of this Program were:

- validity of program rationale;

- contribution to short-term survival of the Canadian-owned publishing sector;

- increase in the number of Canadian-authored titles and/or their distribution and sales; and

- improved economic viability of Canadian-owned publishing companies.

The evaluation found that the underlying rationale of the program was valid and that the program had contributed to the survival of a number of publishers, as well as to improvements in the distribution of Canadian-authored books.

Special Program of Cultural Initiatives (SPCI): The criteria for evaluation of the SPCI were:

- validity of program rationale;

- increased cultural participation and equality of access to cultural activities; and

- improvements in managerial strength and financial viability of Canadian Performing Arts Companies.

As a result of the findings of this evaluation study, changes were made to the program which are intended to increase its effectiveness in enhancing the viability of performing arts organizations. The revised program was approved by Cabinet in May 1984 and elevated from sunset to ongoing status.

Space Subsystems and Components: The evaluation of the Space Subsystems and Components program found the program has stimulated the domestic and foreign sales of products developed under the program; increased employment in the sector; improved Canadian technical capability; and increased the Canadian content in Canadian satellite systems.

Section II
Analysis by Activity

A. Research

Objective

To advance Canada's research and development in the areas of telecommunications, space and information science and technology.

Resource Summary

The Research Activity accounts for approximately 10.6% of total 1985-86 departmental operating expenditures and 21.4% of total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Research and development*	**24,807**	**307**	28,650	295	21,749	279
Industrial and university research support	**11,280**	**50**	13,491	42	4,176	14
Communications Research Centre support services	**11,223**	**155**	10,642	151	9,555	149
Total	**47,310**	**512**	52,783	488	35,480	442
Less: Revenue credited to the vote*	**5,283**	**-**	5,283	-	5,295	-
	42,027	**512**	47,500	488	30,185	442

* Revenue credited to the Vote is from the provision of Research and Development Activities services to other government departments.

Approximately 50.9% of this Activity's total expenses relate to personnel costs. Of the remainder, 20.6% is required for capital expenditures.

Past Financial Performance

Figure 8 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 8: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		**Change**	
	$	P-Y	$	P-Y	$	P-Y
Research and development	21,749	279	21,772	271	**(23)**	**8**
Industrial and university research support	4,176	14	2,834	14	**1,342**	**-**
Communications Research Centre support services	9,555	149	12,011	153	**(2,456)**	**(4)**
Total	35,480	442	36,617	438	**(1,137)**	**4**
Less: Revenue credited to the vote	5,295	-	5,083	-	**212**	**-**
	30,185	442	31,534	438	**(1,349)**	**4**

Explanation of Change: During 1983-84, the Activity received $6,360,000 and four person-years through Supplementary Estimates and adjusted the cash flow to roll-over resources to future years in the amount of $5,125,000 (see page 16).

Description

This Activity chiefly undertakes technological forecasting, planning and conducting of exploratory and applied research and development (R&D) directed towards the solution of problems and the advancement of communications, information and space telecommunications sciences.

Research and Development: The principal endeavours of this area focus on information as a natural resource. They are intended to enhance our understanding of how information is created, assimilated, distributed and utilized and to develop means of storing, processing, transmitting, retrieving and presenting information. Work is carried on in seven areas:

- Information Communications focuses on the techniques, technologies and systems that facilitate, support and extend information communications capabilities, and on the processes by which information is created, processed, conveyed and assimilated.

- Workplace Automation Research deals with scientific activities that can be conveniently grouped into four areas: Integrated Systems R&D, Advanced Workplace Technology R&D, Organizational/ Societal Research, and Science Dissemination and Intelligence Network Operation. The field of workplace automation is extremely broad and encompasses many different technologies and sciences, as well as a host of institutional, social, organizational and behavioural issues that arise from the application of those technologies.

- Broadcasting and Telecommunications analyzes the processes, devices and systems, including radar, by which information or intelligence is acquired, transferred and distributed. Research is carried out in the following areas: microelectronics and radio technology, new broadcasting techniques, radar, military communications, a stationary high altitude relay platform, and optical communications. The purpose of this research is to design, build and test radio systems and networks.

- Spectrum and Environmental Research and Development deals with the propagation media through which electromagnetic signals are transmitted and with the environmental conditions affecting these signals.

- Space Technology R&D covers the major disciplines required for the development of new concepts, techniques and equipment for satellite payloads and vehicles, and for the earth terminals and facilities needed to make effective use of satellites.

- Space Systems and Applications R&D covers the major disciplines required for the development of space systems, applications and services. This work includes the provision of expertise for planning and policy formulation related to satellite communications, and also the provision of the technical expertise to other departments.

- Research Policy and Planning carries out the planning coordination and policy formulation related to DOC's research program, including research in support of other government departments and agencies, and university and industry related research.

Industrial and University Research Support: The focus here is on a series of programs that are the subject of specific ongoing allocations. The aim is to directly support the development and maintenance of a research capability in the areas of telecommunications, information and space technology in Canadian industries and universities. More specifically:

- University Research deals with assistance to Canadian universities through the University Research Program (URP) and the Centres of Excellence (CE) Program, and contributes to university conferences and seminars directed towards research and development in the fields of telecommunications information and space.

- Industrial Research Support manages the Development of Space Subsystems and Components Program (DSSC) through contracts with Canadian industry for the development of satellite and related technology required in future satellite communications systems, and the coordination of, and participation in, a number of R&D programs funded and administered by other departments and agencies: the National Research Council Canada (NRCC) PILP and IRAP programs, the DSS Unsolicited Proposal and Source Development Fund programs, the protection of intellectual property administered by CPDL, the External Affairs Catalytic Seed Fund program, and the INTELSAT R&D programs.

Communications Research Centre Support Services: A full range of services are provided at the Communications Research Centre, located at Shirley's Bay, for the Centre's scientists conducting the activities listed above. These include provision of heat, water, sewage disposal and power; construction and repair to building structures; road construction and repair; grounds upkeep; installation and repair of electrical and mechanical services; steam and plumbing pipes and air conditioning equipment; construction and installation of antennae; and relocation of transmission towers. Also supplied are such technical services as scientific design, graphic arts, scientific imagery, model and calibration services and support services such as security, personnel, property, material management and information.

Performance Information/Resource Justification

The efficiency of research and development projects can best be measured in terms of actual accomplishments in relation to planned outputs. Figure 9 identifies important outputs for 1985-86.

Figure 9: Research Outputs ($000)

Areas	Resources $	Resources P-Y	1985-86 Outputs
RESEARCH AND DEVELOPMENT	19,524	307	
Information Communications			
Information Processing Technology			- Development and demonstrations of improved techniques and tools.
Advances Information Systems			- Improved systems available for industry exploitations.
Networks and Standards			- Contributions leading to national and international standards.
Behavioural Research			- Reports on behavioural issues relating to new information technologies and systems.
Artificial Intelligence			- Establishment of a knowledge system base and evaluation of trial applications.
Workplace Automation Research			- In close collaboration with the industries (software and hardware) and the universities, comprehensive research program in all aspects of the broad spectrum of activities related to the Workplace Automation Research Centre (CWARC).
Broadcasting and Telecommunications			
Optical Communications Research			- Development of integrated, automated, R&D data gathering, processing and experimental control facilities.
Radio Communications Technology			- Development of an in-band pilot amplitude-compandored single-side band system for mobile radio communications.
Stationary High Altitute Radio Platform			- Demonstration of low altitude model aircraft flight using microwave powering.
Radar Research			- Development and demonstration of new radar techniques and their application to radar systems.
Military Terrestrial Communications			- Advances technology for military terrestrial systems.
Spectrum and Environmental R&D			
Propagation Research			- Provision of the propagation expertise required to enhance Canada's interests at conferences of the International Telecommunications Union.
Environmental Research			- Development and recommendation of equipment standard and frequency allocation rules to improve spectrum utilization and services in the land mobile radio bands.
Space Technology			- Advanced technology, components and subsystems for satellite payloads and for earth terminals.
			- Advanced technology, components and subsystems for the satellite platform and satellite payloads.
Space Systems and Applications			- Advanced system and application concepts for optimum use of mobile satellite communications.
			- Advanced system and application concepts for optimum use of fixed and broadcasting satellite communications.
			- Expertise and R&D for external space projects and for the Department's policy, regulatory and industry development functions.
Research Policy and Planning			- Arrangements for sector management and OCG approvals for system design of an MIS in the Research Sector.
			- Development of a 5 year plan for the Research Sector.
			- R&D cooperation with other countries.
			- Management of the International Collaboration Fund.
INDUSTRIAL AND UNIVERSITY RESEARCH SUPPORT	11,280	50	
Research Policy and Management			- Provision of Program management and coordination of the departmental involvement in the NRCC (PILP) program, the DSS (UP) program, and the DOC (DSSC), (URP) and (CE) programs.
COMMUNICATIONS RESEARCH CENTRE SUPPORT SERVICES	11,223	155	- Provision of support services for R&D area.
	42,027	512	

B. Technology Applications and Industry Support

Objective

To foster the application of advanced information and communications technologies and to support the growth and development of industries that create, manufacture and employ those technologies.

Resource Summary

The Technology Applications and Industry Support Activity accounts for approximately 11.1% of the total 1985-86 departmental operating expenditures and 5.8% of total person-years.

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Technology and policy assessment	3,325	21	2,803	17	1,111	13
Industry and economic development	12,833	81	10,545	75	8,144	77
Applications programs	33,509	36	53,999	65	43,855	74
	49,667	138	67,347	157	53,110	164

Explanation of change: The decrease of $17,680,000 or 26.3% from 1984-85 Forecast to 1985-86 Estimates results from the sunset nature of the funding for this Activity.

This Activity earns approximately $750,000 in revenue, which is credited to the Consolidated Revenue Fund, for private sector use of the David Florida Laboratory.

Of the total expenditures, 13.6% relates to personnel costs, 14.5% to capital and 44.5% to contributions. Sunset projects account for approximately 71.1% of the Activity's expenses.

Past Financial Performance

Figure 11 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 11: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Technology and policy assessment	1,111	13	1,459	18	(348)	(5)
Industry and economic development	8,144	77	8,808	74	(664)	3
Applications programs	43,855	74	44,299	47	(444)	27
	53,110	164	54,566	139	(1,456)	25

Explanation of Change: During 1983-84 the Activity received $13,035,000 and 32 person-years through Supplementary Estimates, and adjusted the cash flow to roll-over resources to future years in the amount of $14,168,000 and seven person-years (see page 16).

Description

This Activity is responsible for formulating, developing and implementing policies and programs to foster the development of new technologies and new information and communications services. It also develops, promulgates and manages programs to assist Canadian industry in the design, development, manufacture and marketing of these technologies and services. Technology Applications and Industry Support work is carried out in the following three areas:

Technology and Policy Assessment: Includes the broad multidisciplinary identification and assessment of the potential of new technologies, the requirements for the derived services, and the attendant implications. These assessments, often supported by concept and feasibility studies, permit identification of R&D priorities from a needs perspective and contribute directly to the development of sound strategic plans for federal government involvement in the introduction and support of new technologies and services. They also lead directly to the identification of related public policy and regulatory issues at both the national and international levels.

Industry and Economic Development: Formulates policies and programs for the development and marketing of information and communications technologies and services that have the potential to contribute significantly to Canadian economic development. Policy and program formulation are based upon both micro- and macro-economic analyses of industrial capabilities and market potential. Canadian companies are supported in their identification and pursuit of international marketing opportunities. In keeping with the industry support objectives of the Activity, this area also manages a modern space test facility in the David Florida Laboratory (DFL). Industry avails itself of the specialized test equipment in the DFL in accordance with fees set annually and based upon cost studies. DFL cost recovery is only partial. Fees are sometimes waived by special agreement to improve the competitive position of Canadian firms bidding in the international marketplace.

Applications Programs: This area is responsible for the implementation of major projects. These may be designed to test the concept and/or feasibility of new technologies, to support Canadian companies through contracting programs, or to transfer technologies to industry. Such major projects, often with annual budgets of $2-$20 million, require careful and dedicated management. This area provides the management framework, systems and processes for successful management and evaluation.

Performance Information/Resource Justification

The efficiency of the Technology Applications and Industry Support projects is measured in terms of the achievement of planned outputs. Figure 12 displays specific outputs for 1985-86.

Figure 12: Technology Applications and Industry Support Outputs ($000)

Areas	Resources $	Resources P-Y	1985-86 Outputs
Technology and Policy Assessment	3,325	21	
Communications Technology Assessment			- Reports on the R&D, industrial and socio-economic implications of trends in communications, information and space technologies.
Policy Assessment and Planning			- Reports on the implications of technological change for telecommunications and broadcasting and informatics policy. - Plans for the development and application of new technologies.
Industry and Economic Development	12,833	81	
David Florida Laboratory Operations			- Completion of integration and test of Brazilsat II. - Initiation of L-SAT testing. - Completion of the construction of the third high bay.
Economic and Industrial Development			- Ongoing review and analysis of communications sector. - Assess impact of DOC policy, regulatory, R&D, standards and services functions on industry; develop and implement policies and strategies and programs to assist industry to capitalize on identified opportunities. - Provide international marketing support.
Applications Programs	33,509	36	
Office Communications Systems			- Completion of Phase II of the Office Communications Systems Program.
L-SAT Space Platform Development			- Completion of structural and thermal model testing at DFL.
Development of Advanced Payload Systems			- Completion of systems development.
MSAT			- Completion of the Bridging Phase.
	49,667	138	

C. Government Telecommunications Agency (GTA) Revolving Fund

Objective

To plan, develop, coordinate and provide telecommunications services and facilities that satisfy the requirements of federal departments and agencies at the lowest possible cost.

Resource Summary

Figure 13 displays total estimated revenues and expenditures that result in a nil surplus in the 1985-86 Estimates Year.

Figure 13: Statement of Net Modified Cash Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue	171,000	149,000	130,188
Expenses			
GTA Service Offerings	168,980	147,245	129,041
Planning and Coordination	2,020	1,755	1,216
	171,000	149,000	130,257
Deficit (Surplus) for the year	-	-	69
Resources Required (Provided from)			
Loss (Surplus) for the year	-	-	69
Depreciation	(115)	(102)	(77)
Provision for Employee Termination Benefits	(153)	(155)	(90)
Working Capital Changes	1,605	1,859	3,458
Other Items	-	-	(2,471)
Capital Expenditure	174	174	320
Net Modified Cash Requirements	1,511	1,776	1,209
Person-Years	218	211	207

The telecommunications costs incurred in the provision of shared and customized voice and data services account for approximately 91.6% of the operating budget for 1985-86. Personnel costs account for approximately 5.2% of the total operating budget.

Mode of Financing: The Agency is financed by a revolving fund that covers all administrative, operational and capital expenditures. It is managed on a full cost revenue-dependent basis. Under this system, the Activity is financed by charging federal government departments and agencies for telecommunications services and facilities provided in accordance with approved rates. Rates should be fair, equitable and stand the test of comparison with similar services available directly from commercial carriers.

Past Financial Performance

Figure 14 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 14: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Revenue	130,188	127,000	3,188
Expenses			
GTA Service Offerings	129,041	125,247	3,794
Planning and Coordination	1,216	1,653	(437)
	130,257	126,900	3,357
Deficit (Surplus) for the year	69	(100)	169
Resources Required (Provided from)			
Loss (Surplus) for the year	69	(100)	169
Depreciation	(77)	(125)	48
Provision for Employee Termination Benefits	(90)	(74)	(16)
Working Capital Changes	3,458	1,726	1,732
Other Items	(2,471)	-	(2,471)
Capital Expenditure	320	174	146
Net Modified Cash Requirements	1,209	1,601	(392)
Person-Years	207	209	(2)

Explanation of Change: The overall 2.5% variance of actual over planned revenues and 2.6% variance of actual over planned expenditures relates to the 1982-83 estimated base figure of $113 million that was used in arriving at the 1983-84 planned revenues and expenditures and an anticipated 12% increase from year to year.

Description

The Minister of Communications is responsible under the Communications Act for planning and coordinating telecommunications services for departments, branches and agencies of the Government of Canada. The Government Telecommunications Agency meets this responsibility through the following two areas:

GTA Service Offerings: This area consolidates the government's telecommunications requirements and is able to derive the benefits of economies of scale by sharing and consolidating and by optimizing networks and services, while utilizing volume discounts, in the provision of telecommunications facilities and services that are leased or purchased from common carriers or other suppliers. A full range of telecommunications facilities and services are provided, including shared voice and data services, customized voice and data services, consulting services and directory services. In addition GTA's professional personnel, with expertise in telecommunications technology and in the development, acquisition and management of systems and applications, advise departments on their telecommunications requirements. GTA is a decentralized function with representatives in all regional and six district offices.

Planning and Coordination: This area develops an overall government telecommunications planning and coordination framework within which broad strategic objectives and short- or long-term plans for the government telecommunications infrastructure are developed. It analyses, develops and recommends administrative policies and disseminates expertise and information to assist departments in planning and effectively managing telecommunications (as well as developing expertise to increase their effectiveness). It also conducts surveys and studies in telecommunications resources and inventories and determines the maximum benefits that government operations can derive through the application of the most cost-effective, state-of-the-art telecommunications technologies. It maintains an interdepartmental committee structure for coordination enhancement.

Performance Information/Resource Justification

The primary objective of the Agency is to maximize savings for the federal government through sharing and consolidation of telecommunications services and facilities at a given level of service. Based on continuing studies within GTA, the estimated aggregate net savings derived by the government are about 40% as compared with commercial services available directly from commercial carriers (e.g. Direct Distance Dialing).

Figure 15 portrays a measure of economy that exemplifies the degree of savings for intercity voice services by contrasting the Direct Distance Dialing (DDD) rates of commercial carriers with those offered by the Government Telecommunications Agency for calls placed to or from Ottawa to ten major Canadian cities.

Figure 15: Examples of GTA Intercity Prime Time Rates Compared to Direct Distance Dialing Rates

To or from Ottawa	Direct Distance Dialing Initial Minute	Direct Distance Dialing Addt'l Minutes	GTA Rate per Minute	% Savings per Add'l Minute
Halifax, N.S.	.90	.90	.45	50
St. John's, Nfld.	1.00	1.00	.63	37
Saint John, N.B.	.85	.85	.43	50
Charlottetown, P.E.I.	.85	.85	.43	50
Montreal, Que.	.67	.56	.28	50
Toronto, Ont.	.72	.61	.32	46
Winnipeg, Man.	1.00	1.00	.50	50
Regina, Sask.	1.04	1.04	.52	50
Edmonton, Alta.	1.10	1.10	.56	49
Vancouver, B.C.	1.10	1.10	.66	40

The Agency, operating under the umbrella of the common services policy, provides most of the voice telecommunications services and facilities, but only a fraction of other services (such as data communications) for departments and agencies of the federal government. However, with recent advances in technology and the development of integrated services and networks, new cost-effective applications are continually being added to the Agency's inventory of shared services. This growth, together with the expansion in the more discretionary customized services obtained by government users through GTA, attests to the Agency's effectiveness in satisfying the needs of its clientele. It also reflects the results of planning and coordination in achieving increased sharing and consolidation.

Figure 16 portrays the GTA share of the government telecommunications market in both actual and projected terms. This upward trend reflects both the satisfactory level of service and the economies enjoyed by the Agency's clientele.

Figure 16: GTA Percentage of Federal Government Telecommunications Expenditures

Note: The significant increase in 1982-83 is mainly attributable to the Agency's achievements in being designated to act on behalf of the federal government for the consolidated acquisition of bulk services.

One measure of the Agency's efficiency is the ratio of the revenues it recovers, with respect to telecommunications services and facilities provided, in relation to the person-years authorized to carry out its mandate. The revenues are expressed in 1979-80 constant dollars.

Figure 17: Revenues per Person-Year (1979-80 Constant $)

It is useful to note the volume of revenues accruing to GTA for each of the categories of services provided. Figure 18 summarizes the distribution of revenues and person-years allocated by service category.

Figure 18: Total Revenues ($000) and Person-Years Allocation by Services

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84	
Service	$	P-Y	$	P-Y	$	P-Y

Total	171,000	218	149,000	211	130,188	207

D. Management of the Radio Frequency Spectrum

Objective

To manage the utilization and development of the radio frequency spectrum in Canada and to protect Canada's rights regarding use of the spectrum through international agreement and regulations.

The Management of the Radio Frequency Spectrum Activity also must provide regional representation for all activities of the Department in all regions of Canada and must provide ready accessibility by the Canadian public to the Department as a whole through its regional structure.

Resource Summary

The Management of the Radio Frequency Spectrum Activity accounts for approximately 10.9% of the total 1985-86 departmental operating expenditures and 40.7% of the total person-years.

Figure 19: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Spectrum planning and Engineering	13,234	300	12,696	300	11,798	258
Authorization	20,366	376	19,533	372	18,066	388
Spectrum control	12,682	238	12,163	241	12,072	261
Gross Spectrum Management Expenditures	46,282	914	44,392	913	41,936	907
Less: Revenue credited to the vote*	630	-	630	-	579	-
Net Spectrum Management	45,652	914	43,762	913	41,357	907
Non-spectrum Operations**	3,086	61	3,003	59	2,935	58
Total Activity	48,738	975	46,765	972	44,292	965

* Revenue credited to the Vote is from the performance of ship radio inspections on behalf of the Department of Transport for the inspection of foreign and domestic vessels for the issuance of Safety Radio Certificates.

** These areas earn approximately $34 million in revenue that is credited to the Consolidated Revenue Fund from the issuance of licences for non-broadcasting radio communications equipment and $1 million from the Terminal Attachment program (see page 69).

It should be noted that approximately 70.0% of the total costs are recovered through revenue generating activities.

Past Financial Performance

Figure 20 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 20: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y

Gross Expenditures	44,871	965	43,630	971	1,241	(6)
Less: Revenue credited to the vote	579	-	580	-	(1)	-
	44,292	965	43,050	971	1,242	(6)

Explanation of Change: During 1983-84, this Activity received $1,922,000 through the New Employment Expansion and Development (NEED) Program and the Summer Canada-Student Employment Program.

The Department implemented a Regional Dimension Action Plan early in the 1983-84 fiscal year. Increased resources were applied to non-spectrum operations to support enhanced regional representation, including improved access to the Department as a whole through the regional and district offices, and increased regional input to the development of policies or projects such as economic assessments.

Description

The Management of the Radio Frequency Spectrum Activity embraces all the functions required to maximize the benefits of this finite, yet reusable, natural resource. These include planning its effective use through engineering studies and international negotiations leading to the allocation of specific frequency bands for specified services, certifying equipment to meet interference standards, licensing users of particular frequencies and bands, establishing notification and reservation procedures with the U.S. and other foreign countries, and monitoring and investigating instances of interference and misuse of bands. The fulfillment of these functions must be in accordance with the responsibilities that devolve from the provisions of the Radio Act and Regulations and the Telegraph Act. A related responsibility is technical certification for the granting of licences for broadcasting undertakings by the CRTC as defined in the Broadcasting Act. The Activity consists of four areas:

Spectrum Planning and Engineering: This function involves policy development and spectrum planning at both the national and international levels. Regulations, standards and specifications are developed and issued to meet the needs of the Canadian communications industry and the Canadian public. It includes preventive and recuperative measures such as public education programs to heighten awareness of responsibilities relating to spectrum utilization. The impact of new communications techniques and technologies on the radio spectrum is assessed, computer-based tools and applications programs are developed, and procedures are established to support the authorization and spectrum control functions.

Authorization: Within this area, the responsibility for evaluating, analysing and processing applications from the public and issuing non-broadcasting radio licences and radio operator certificates is based primarily in the five regional and forty-seven district and sub-offices. Functions include the coordination and registration of all frequency assignments, collection of all related fees and, for some licences, engineering studies prior to frequency selection. A major function of the broadcasting area is the assessment for compliance with regulations of technical briefs in support of applications for technical certificates for all AM, FM, TV and major cable TV broadcasting undertakings. Detailed engineering studies, frequency assignment, coordination with the CRTC and foreign administrations, and liaison and consultation with the broadcasting industry are involved. Radio operators examinations are conducted and certificates of proficiency in radio are issued. The Communications Laboratory provides testing, certification and type-approval for all types of radio equipment, calibration of DOC and client test equipment, ionospheric measurement services, and specialized laboratory work in support of specific engineering standards development.

Spectrum Control: This area encompasses measurement and analysis of the state of the radio frequency spectrum and the application of corrective measures, including the enforcement of provisions of the Radio Act and Regulations. Responsibilities include inspection, investigation and spectrum surveillance to detect non-conformity with the conditions of licences, technical construction and operating certificates or infractions of legislation. The major responsibility is the investigation and resolution of radio interference problems reported by licencees and the general public. The objective of Spectrum Control activities is to ensure that maximum benefits from use of the radio spectrum are derived both in the form of the number of users accommodated and the quality of the service they receive. Since the costs of non-compliance with departmental standards and good engineering practices can frequently be externalized (e.g. causing radio interference to other users) Spectrum Control activitites ensure that Canada's spectrum resources are not wasted. Corrective measures include public education activities, warnings, suspensions, revocations, and, relatively infrequently, prosecutions and forfeitures of equipment.

Non-spectrum Operations: This area encompasses two sub-components.

Regional Representation: The regions play a role in the delivery of the Department's various research and development programs (satellites, radio, network), in the promotion of new technologies and support to industry, cultural affairs and development of cultural industries, in the development and implementation of emergency measures programs and in the various federal programs in the field of cultural affairs. They also provide liaison with provincial governments, the electronics industry and the universities. The regional offices and the district and sub-offices represent the primary point of contact for DOC's public. They provide accessibility to all departmental programs and provide a regional perspective to the development of economic, social and cultural policies. Implementation of corresponding policies and programs becomes the responsibility of the regional offices. The Government Telecommunications Agency (GTA) also forms an integral part of the five regional organizations although the associated resources are not reported within this planning element. This area is also responsible for providing work plans, evaluations, financial management and communications to the public and for conducting meetings for the federal voting members of the Management Committee of the Manitoba ERDA. Activity resources are utilized for the project management of all technology matters.

Terminal Attachment: This area develops national standards and procedures and certifies and tests terminal equipment for direct attachment to the federally regulated telecommunications networks. This satisfies the user's desire for more choice and innovation in equipment availability and safeguards the traditionally high standard of service provided by the Canadian carriers.

Performance Information/Resource Justification

This Activity involves six major outputs that account for 66.9% of total resources and major projects that account for 26.8% of resources. Workload volumes and dollar resources utilized are provided in Figure 21.

Figure 21: Selected Outputs and Allocated Resources ($000)

	Estimates 1985-86			Forecast 1984-85			Actual 1983-84		
	P-Y	Volume	$	P-Y	Volume	$	P-Y	Volume	$

Directed investigations/ surveys *	-	18.2	-	-	17.9	-	-	8.8	-
Spectrum planning and engineering - projects	300		13,234	300		12,696	258		11,798
	914		46,282	913		44,392	907		41,936

* Output definitions have been modified from previous years in order to more accurately reflect workload.

Authorization: This area has as its principal outputs non-broadcasting radio station licences, technical construction and operating certificates, radio operators examined, bilateral proposals and International Frequency Registration Board (IFRB) notifications.

The licensing function consumes the largest portion of the resources. Categories of non-broadcasting radio stations include amateur, coast, land, mobile, ship, and earth and space stations. Licence fees are calculated according to a schedule for some types of licences; other fees are a variable amount, reflecting the usage of the radio frequency spectrum at a given station. Variable fees are calculated by considering the number of assigned frequencies, the channel capacity of the station and, in some cases, the location of the station antenna.

Radio operators examined reflects the workload associated with the administration and evaluation of examinations and issuance of certificates of proficiency. The 1984-85 forecast has been revised to include this element. Bilateral proposals consist of Canada/U.S. proposals for U.S. comment on frequency assignments within 75 miles of the border for 30-890 MHZ. Likewise, U.S. proposals for similar assignments in the U.S. are reviewed by Spectrum Management. International Frequency Registration Board (IFRB) notifications, which also form an output of this area, are those frequency assignments made in Canada that need international protection from interference.

It should be noted that these outputs are directly related to demand and, therefore, fluctuations occur as a result of the state of the economy and technological change.

Spectrum Control: The two major outputs are inspections and investigations requested by the public and directed investigations and surveys. Certain inspections and investigations are performed upon public request and range from ship surveys to radio and TV interference studies. Directed investigations and surveys are carried out as part of the Department's plan to meet its responsibility for maintaining an acceptable level of adherence to the Radio Act and Regulations and to technical standards.

The overwhelming majority of corrective measures consist of advice and warnings given during radio user meetings, individual station visits and the like. In exceptional cases requiring more serious action, measures include legislation and regulation changes, suspensions, revocations, equipment forfeiture or prosecution.

A spectrum control model has been implemented throughout the regions as a framework to bring about increased measures of economy, operating efficiency and effectiveness, managerial control and accountability through its measurement programs, data analysis and corrective programs. A thorough management analysis of outputs and resource requirements will determine the nature and timing of full-scale implementation.

Spectrum Planning and Engineering: The work performed in spectrum planning and engineering is project oriented and is measured in terms of the achievement of identified outputs. The outputs identified in Figure 22 highlight major projects and activities.

Figure 22: Spectrum Planning and Engineering Outputs ($000)

Areas	Resources $	Resources P-Y	
Regulations, Policies and Standards	5,174	136	- Review of licensing procedures and related fee schedules. - Standards for Digital Mobile Systems. - M-SAT spectrum engineering. - EMI/EMC studies. - Standards development relating to cellular radio. - Client interface activities (seminars, demonstrations, public education).
Operational Procedures and Standards	7,635	146	- Expansion and deployment of mini-computer based systems support administrative and technical functions. - Studies on new personal radio communications services.
International Planning	425	18	- CCIR/CCITT/WARC/RARC preparation and participation. - Implementation of WARC decisions of January 1984. - Submission of Canadian proposals for WARC (January 1986). - Assurance that GATT Agreement provisions are adhered to in the development of regulations, standards and certification systems. - Canadian positions development for WARC '87 (Mobile) and WARC '88 (Space).
	13,234	300	

Non-spectrum Operations: In May 1983, the Department implemented a Regional Dimension Action Plan designed to strengthen existing organizations and programs in the regions. In conjunction with the appropriate headquarters personnel, the regions participate in the determination of policy issues and approaches to be taken; participate in the decision-making process on policy issues before release to the public; ensure that relevant activities and developments in the regional offices are brought to the attention of appropriate headquarters units; participate in the planning of major economic projects and initiatives; provide input respecting the equitable distribution of grants, projects, contracts, etc.; identify possible projects that could qualify under DOC sponsored programs; act as the focal point in the liaison with regional officials of the Department of Regional Industrial Expansion (DRIE) and the Federal Economic Development Coordinator (FEDC); participate in the preparation of Treasury Board and Cabinet submissions and promote FEDC support for these where appropriate; work with other federal departments to develop economic strategies within each Region; and fulfill the public relations, information services functions at the regional level.

E. Policy Development and Coordination

Objective

To develop policies and programs that promote the development, establishment and efficiency of telecommunications and broadcasting services; to coordinate all departmental policy endeavours; and to protect and sustain Canadian interests in international telecommunications and cultural undertakings.

Resource Summary

Policy Development and Coordination accounts for approximately 3.4% of total 1985-86 departmental operating expenditures and 7.2% of total person-years.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Policy development	5,197	76	4,794	76	4,605	73
International and federal-provincial activities	5,877	56	5,391	51	5,743	52
Strategic planning and information services	3,958	45	2,822	40	2,882	39
Total	15,032	177	13,007	167	13,230	164
Less: Revenue credited to the vote	361	-	-	-	-	-
	14,671	177	13,007	167	13,230	164

Approximately 61.3% of the costs of Policy Development and Coordination are personnel related and 20.0% of the budget is devoted to contributions. Other costs are primarily for travel expenditures, supplies, communications and professional services. The revenue relates to the operation of the Department's Expo '86 Unit (see page 69).

Past Financial Performance

Figure 24 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 24: 1983-84 Financial Performance ($000)

	1983-84

Strategic planning and information services	2,882	39	2,868	39	14	-
	13,230	164	12,343	166	887	(2)

Explanation of Changes: During 1983-84, this Activity received $492,000 through Supplementary Estimates for contributions to the ITU and the Conseil de la vie française en Amérique. The remainder of the variance is related to salaries.

Description

This Activity is responsible for the formulation of strategies for the development, promotion and monitoring of broadcasting and telecommunication services; for the coordination of federal-provincial activities in communications and culture; for the development of Canada's policy on international aspects of communications and culture; for the integration and harmonization of policy within the Department; and for the development and dissemination of information regarding policies, programs and regulations to the departmental constituency and the general public.

The work of this Activity comprises three principal areas:

Policy Development: Responsibility includes the development of telecommunications policies and providing support for the development of international proposals for achieving optimum utilization of the radio

frequency spectrum and the orbit resource to meet the varying and conflicting needs of users and the development of policies regarding the structure and regulation of the telecommunications and broadcasting industries. This area also has overall responsibility for developing and recommending policies and programs having broad social, cultural and economic impacts in the areas of broadcasting and other content services. Responsibility for policies and negotiated positions to protect and sustain Canadian interests in international communications systems, services and undertakings are also included.

More specifically, the area is concerned with the promotion of the orderly introduction of new services responding to economic and technical development; development and recommendation of policies, legislation and regulations for the establishment and operation of Canada's national and international telecommunications networks and broadcasting services; analysis of needs and promotion of programs for extension of telecommunications and broadcasting services to remote and sparsely populated areas and under-served groups; and development of financial and regulatory policies. The area also analyzes, and advises on, decisions of the CRTC and petitions to the Governor-in-Council under the Broadcasting Act and the National Transportation Act and provides advice relative to CBC and Telefilm Canada.

International and Federal-Provincial Activities: This area encompasses the direction and monitoring of Canadian policy formulation and implementation related to the international aspects of communications and cultural issues in general, the general responsibility for relations with foreign communications and cultural authorities, the active pursuit of policy objectives at international conferences and meetings, and the shaping of the overall role of Canada in international organizations such as the International Telecommunications Union (ITU) and in the communications and cultural issues dealt with in UNESCO and the OECD.

Canada is directly interested in establishing domestic and international standards for technical characteristics, systems and service performance appropriate for the manufacture of equipment in Canada; in promoting and protecting Canadian interests aimed at meeting the communications and cultural needs of developed and developing countries; and in participating in international consideration of the implications of developments in the broad range of informatics-related matters.

Federal-Provincial Relations ensures that the federal government's interests are advanced in communications and culture through information exchange, coordination, consultation and/or negotiation with provinces respecting the development and administration of policies and programs; oversees the implementation of the Department's regional dimension action plan to promote a greater regional input to the policy process within DOC, and provides internal program planning and management support services within the Activity.

Strategic Planning and Information Services: This area has primary responsibility for designing and maintaining a strategic planning system that integrates the strategic planning functions of the Department. This includes: the development and maintenance of a comprehensive framework for policy formulation within the department; the development and maintenance of a comprehensive planning database; the development of the Department's strategic plan and priorities; and liaison with central agencies.

Information Services is responsible for all matters relating to the development and dissemination of information to the departmental constituency and the general public with regard to the policies, programs, initiatives and regulations of the Department.

Performance Information/Resource Justification

Productivity is difficult to quantify on a year-to-year basis because the development of telecommunications and broadcasting policy is an evolutionary process extending over several years and even decades. Nevertheless, there are a number of non-repetitive, analytical projects performed by a variety of professionals specializing in policy development and the formulation of legislation and regulations. The actual products resulting from these identifiable projects are policies or studies that may reflect current government priorities within specific areas of Policy Development and Coordination, or that may be eventual components of more long-term policy development endeavours. Figure 25 displays the principal outputs planned for 1985-86.

Figure 25: Policy Development and Coordination Outputs ($000)

Areas	Resources $	Resources P-Y	1985-86 Outputs
Policy Development	5,197	76	
Broadcasting and New Content Services			- Implementation of the broadcasting policy and the CBC policy. - Development and implementation of the radio industry policy. - Development of policies for direct-to-home broadcasting post-1990. - Development of policies on multilingual broadcasting. - Development of a policy on Communications and Physical Disability. - Implementation of the Videotex/Teletext Policy initiatives. - Analysis of appeals to Governor-in-Council pursuant to Section 23 of the Broadcasting Act. - Report on the DOC OCS field trial. - Review and analysis of CRTC decisions.
Telecommunications			- Development and implementation of the Telecommunications Policy Strategy. - Development and promulgation of radio licensing policies and procedures affecting major users of satellite earth stations and microwave systems. - Development of policies and positions on telecommunications standards. - Review and analysis of CRTC decisions for compliance with the Administrative Price program. - Radio systems and spectrum utilization policies for licensing of fixed, mobile, broadcasting and space orbit system.
International and federal-provincial activities	5,877	56	
International Relations			- Effective management of Canada's communication and cultural relationships with multilateral organizations such as the International Telecommunications Union (ITU), INTELSAT and INMARSAT. - Development and implementation of policy for Canadian participation in various multilateral conferences and meetings dealing with matters relating to international telecommunications, international technical standards for telecommunications systems, informatics, and international cultural programs. - Effective management of Canada's telecommunication and cultural relationships with key countries, in particular the U.S.A., U.K., France and Japan. - Preparation, negotiation and conclusion of bilateral film and video co-production agreements with countries which are of special interest to Canada's film and video production industry. - Preparation and submission of advice and policy documents to the Minister and to the Cabinet on matters relating to international telecommunications and cultural relations.
Federal-Provincial Relations			- Management of DOC involvement in the ERDA process including project management of the Cité du cinéma et de la télévision project and directing and voting responsibilities respecting the implementation of the Manitoba Sub-Agreement on communications and cultural enterprises. - Participation in the development of strategies and policies relating to the means by which the objectives of improved federal-provincial relations in communications and culture can be achieved. - Increased level of activity with the provinces in bilateral and multilateral meetings involving ministerial and senior officials.
Strategic planning and information services	3,597	45	
Strategic Planning			- Maintenance of strategic planning process and data base. - Development of strategic and long term plans and priorities. - Major planning review of the Department activities and policies. - Coordination and development of legislation.
Information Services			- Preparation of communications plans, announcement strategies and public environment analysis. - Publication and distribution of reports, studies, policy documents, etc. - Preparation and distribution of news releases, fact sheets, articles, etc.
	14,671	177	

F. Cultural Affairs

Objective

To formulate Canada's national cultural policy in support of the cultural activities; to support or manage select artistic and cultural programs as the government may, in special circumstances, determine; to advise the Minister on the implementation by cultural agencies of programs consistent with national cultural policy and to analyse social policy issues arising from the application of cultural, communications, space, and information technologies.

Resource Summary

The Cultural Affairs Activity accounts for approximately 21.2% of the 1985-86 departmental operating expenditures and 3.4% of the total person-years. The Postal Subsidy amounts to $55.1 million which represents 58.2% of the above 21.2%.

Figure 26: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Non-budgetary						
Loans	**10**	**-**	10	-	5	-
	94,602	**80**	93,612	82	80,405	74

This Activity earns approximately $30,000 in revenue credited to the Consolidated Revenue Fund from the certification of Canadian films and video tapes.

Of the total expenditures, 58.2% relates to the Postal Subsidy, 4.1% relates to personnel costs and 34.1% relates to grants and contributions.

Past Financial Performance

Figure 27 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 27: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		**Change**	
	$	P-Y	$	P-Y	$	P-Y
Budgetary						
Policy development	57,470	48	57,992	54	**(522)**	**(6)**

Non-budgetary						
Loans	5	-	10	-	**(5)**	**-**
	80,405	74	75,068	78	**5,337**	**(4)**

Explanation of Change: The net change of approximately $5,337,000 (7.1%) is made up of additional funds for the Cultural Support Programs area, $13,864,000; roll-over of SPCI funds to 1985-86, $4,750,000; budget reduction for the Book Publishing Development Program, $1,000,000; budget reduction for the Capital Assistance Program, $960,000, and a lapse or under-utilization of funding, $1,817,000 (see pages 15 and 16).

Description

This Activity is situated at the departmental headquarters in Ottawa as a national centre of expertise in cultural policy concerns and a departmental resource on the social policy aspects of new technologies.

The work of this Activity is carried out in two principal areas:

Policy Development: This involves both cultural and social policies. The former analyzes national issues concerning copyright, film and video, sound recording, books and periodicals, heritage, performing and visual arts and crafts. It formulates national policy in these areas, including coordinating the achievement of objectives by the following federal cultural boards and agencies: Canada Council, Canadian Film Development

Corporation, National Arts Centre Corporation, National Film Board, National Library, National Museums of Canada, Canadian Museums Construction Corporation, Public Archives of Canada, and the Cultural Property Export Review Board.

The social policy function involves analysis and assessment of the broad social impact of communications and information technologies in areas such as employment, the family, the individual, and institutional structures. These analysis and assessment activities include evaluating the implications of new technology and related services in the arts community and the management of social policy research in the development of socially responsive policy positions for the Department.

It is also a policy development function to maintain a small in-house and significant commissioned research capacity in cultural disciplines and to provide functional advice in relation to the Cultural Statistics Program of Statistics Canada. The area also includes Activity planning and the resources for the offices of the Assistant Deputy Minister, Cultural Affairs and the Director General, Cultural Policy and Programs.

Cultural Support Programs: These programs regulate activities or offer financial assistance to individuals and organizations across Canada in the fields of cultural initiatives, film and video production, the export and import of cultural property and insurance coverage for travelling exhibitions.

Under the Cultural Affairs Activity, the clients for the services and programs offered comprise: the cultural boards and agencies listed in the above description of the Policy Development area; Canadian film, video, sound recording, and book and periodical industries; other federal and provincial departments and agencies; post-secondary institutions; national service organizations and associations; professional performing and visual arts and custodial organizations and institutions; and dealers and collectors of cultural property.

Performance Information/Resource Justification

The outputs of the Policy Development area are not amenable to statistical analysis because they are unique to each project undertaken. Lists of outputs prepared as part of detailed project workplans are the most measurable operational targets available. The achievement of operational targets reflects management's ability to plan and monitor productivity against approved project budgets and plans. At present, the statistical productivity measures are volume of correspondence received and answered, and volume of Treasury Board submissions processed by DOC on behalf of the cultural agencies.

The outputs of the Cultural Support Programs area can be reliably aggregated and statistically analyzed; they can be measured in terms of goals planned and actually achieved. Specific productivity and

effectiveness measures include grants and contributions - actual volume and value; film and video tape certification - volume of approvals; provisional approvals - volume and value; moveable cultural property certifications - volume and value; insurance coverage for travelling exhibitions - number and value of exhibitions insured.

Figure 28: Cultural Affairs Outputs ($000)

Areas	Resources $	Resources P-Y	1985-86 Outputs
Policy Development	59,846	55	- Production of government action plan and input into legislation for achievement of cultural objectives by the Department and the Cultural Agencies. - Consultation and cooperation with governmental organizations and cultural communities. - Maintenance and improvement of information base in the area of Canadian arts and culture. - Functional advice regarding the Cultural Statistics Program administered by Statistics Canada. - Management of policy-related research studies. - Policy and budgetary proposals to Cabinet. - Implementation and follow-through of government decisions. - Finalization of draft copyright legislation in collaboration with CCAC.
Cultural Support Programs	34,746	25	- Administration of grants and contributions to: non-profit cultural organizations under SPCI; custodial institutions for retention of Canadian cultural property. - Certification of Canadian content in film and video programs. - Insurance coverage for travelling exhibitions.
	94,592	80	

Figure 29 shows the level of grants, contributions and subsidies in each of the output areas net of administrative and operating expenses.

Figure 29: Grants, Contributions and Subsidies by Major Output Area ($000)

Major Output Area	Grant/Contribution/Subsidy	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Support to publishing industry	Postal Subsidy[1]	55,093	55,650	53,000

	Toronto International (Jubilee) Festival 1984	-	150	-
	Drummondville World Folklore Festival	-	-	100
Support of national cultural service organizations	Canadian Conference of the Arts	555	555	555
	Canadian Crafts Council	140	140	140
	Film and Video Organizations	300	300	-
Support to film and video festivals in Canada	Canadian Film Festivals	-	-	350
Grants to patriate or conserve movable cultural property	Export/Import of Cultural Property	2,190	2,190	1,508

1 The Department makes a financial contribution to the Canada Post Corporation to purchase reduced rates for newspapers, periodicals, books and films posted second class and book, library and educational film tariffs distributed in Canada and abroad. The subsidy has been set at $50 million annually in 1982-83 dollars.

G. Departmental Administration

Objective

To provide program direction, planning and control as well as all required support services, systems, policies and procedures, in accordance with departmental standards and central agency guidelines.

Resource Summary

Expenditures for the Departmental Administration Activity will account for approximately 4.5% of the departmental operating expenditures and 12.4% of the person-years in 1985-86.

Figure 30: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Corporate management, planning and control	**4,167**	**58**	3,129	58	3,135	58
Common services	**16,224**	**239**	16,929	234	14,196	235
	20,391	**297**	20,058	292	17,331	293

Approximately 61.5% of this Activity's total expenses relate to personnel costs.

Past Financial Performance

Figure 31 summarizes the major changes in financial requirements that occurred in 1983-84.

Figure 31: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Corporate management, planning and control	3,135	58	2,627	59	508	(1)
Common services	14,196	235	14,446	234	(250)	1
	17,331	293	17,073	293	258	-

Explanation of Change: The variance is a result of a reallocation of salary expenditures arising from the departmental reorganization and the increase in contributions to employee benefit plans.

Description

Departmental Administration provides central management and administration as well as a full range of common services.

Corporate Management, Planning and Control: This area represents the central management and administration of the Department. It includes the Minister's and Deputy Minister's offices, the Human Resources Planning function of the Personnel and Administration Sector and the Planning and Control functions of the Financial Management Sector (i.e. Financial Planning, Performance Measurement, Program Evaluation and Internal Audit).

Common Services: This area provides a broad range of centralized services to departmental headquarters. These operations cover all essential functions of general administration, computer and information systems, finance, personnel, official languages, and security services.

Performance Information/Resource Justification

Figures 32 and 33 show the ratio of Departmental Administration person-years and expenditures to the departmental operating totals.

Figure 32: Relationship of Departmental Administration Person-Years to Total Department Person-Years

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Total Department	2,397	2,369	2,312
Departmental Administration	297	292	293
Percentage of Total	12.4	12.3	12.7

Figure 33: Relationship of Departmental Administration Expenditures ($000) to Total Departmental Operating Expenditures

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Total Department*	319,614	296,212	257,794
Departmental Administration	20,391	20,058	17,331
Percentage of Total	6.4	6.8	6.7

* Represents total operating costs exclusive of grants and contributions, the Postal Subsidy, the payment to the Canada Museums Construction Corporation Inc., and capital expenditures. These non-operating expenditure catagories do imply an administrative workload; however, since they are apt to fluctuate considerably from year to year, their exclusion avoids any distortion of the percentages.

B. Cost Analysis

Net Program Costs: The Department of Communications' 1985-86 Estimates include those expenditures to be charged to the Department's voted appropriations, less receipts and revenue credited to the Vote ($6,274,000). Other cost items, such as $11,905,000 for accommodation, $1,498,000 for employee benefits and $239,000 for accounting and cheque issue services, as well as $206,048,000 for receipts must also be included when considering the actual costs to operate the Program.

Figure 39: Net Costs of Department by Activity for 1985-86 ($000)

	1985-86 Gross Expenditures	Add Other Costs	Total Cost	Deduct Receipts	Total Net Cost	Total 1984-85
Research	47,310	-	47,310	5,283	42,027	47,500
Technology Applications and Industry Support	49,667	-	49,667	1,720	47,947	66,127
Government Telecommunications Revolving Fund	170,909	-	170,909	169,398	1,511	1,776
Management of the Radio Frequency Spectrum	49,368	-	49,368	35,530	13,838	28,100
Policy Development and Coordination	15,032	-	15,032	361	14,671	13,007
Cultural Affairs	94,602	-	94,602	30	94,572	93,582
Departmental Administration	20,391	13,642	34,033	-	34,033	33,607
	447,279	13,642	460,921	212,322	248,599	283,699

Note: This table does not include payments to the Canada Museums Construction Corporation Inc.

C. Revenue Analysis

Figure 40: Revenue Analysis ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue credited to the vote			
Revenue from Research and Development Services	5,283	5,283	5,295
Ship Radio Inspection Fees	630	630	579
Revenue from CHPC for Expo '86	361	-	-
	6,274	5,913	5,874
Receipts credited to the Consolidated Revenue Fund			
Radio Station Licence Fees	34,100	17,865	17,471
Return on Investments	-	-	3,000
Other Receipts	2,550	2,050	3,217
	36,650	19,915	23,688
Receipts credited to the Government Telecommunications Agency Revolving Fund*	169,398	147,141	129,989
Total Receipts	212,322	172,969	159,551

* See Figure 1, page 10.

Revenue Credited to the Vote: The Department of Communications (DOC) earns revenue credited to the Vote from three sources. The first is the provision of research and development (R&D) services to other government departments, the second is the performance of ship radio inspections on behalf of the Department of Transport (DOT) and the third is from the Canada Harbour Place Corporation (CHPC).

DOC's primary client for R&D services is the Department of National Defence (DND). DOC undertakes, by agreement, certain military research and an R&D program under direct DND funding. This work is carried out on a full cost-recovery basis that includes overhead, direct program costs and the cost of site services (e.g. cleaning, heating and security).

Ship radio inspections stem from DOT's responsibility to carry out ship surveys and inspections to establish compliance with certain maritime operating regulations. Although the responsibility for this work rests with DOT, technical expertise is furnished by DOC according to an agreement between the two Departments; DOC performs inspections in return for an annual payment by DOT, calculated to recover DOC's direct costs.

Canada Harbour Place Corporation (CHPC) is responsible for the construction of Expo '86 Canada Place and for the construction and operation of the Federal Pavilion. DOC has been asked to provide technical expertise in developing innovative exhibit concepts for the Pavilion and to assist in developing a cultural and entertainment program which will showcase Canadian artists from various disciplines and regions of the country. Revenue received from CHPC is to fund the operation of the Department's Expo '86 Unit.

Receipts Credited to the Consolidated Revenue Fund (CRF): The major source of receipts credited to the CRF is the issuance of licences for General Radio Service (Citizen's Band) and non-broadcasting radio communications equipment. Fees are charged on a per-licence basis according to published schedules and formulas (see page 47).

Other receipts credited to the CRF are revenues calculated on a cost-recovery basis for private-sector use of the David Florida Laboratory; fees recovered for the testing of all telecommunications transmitting apparatus, to ensure compliance with Canadian technical specifications and standards; a refund of previous years expenditures; and fees resulting from the Canadian Film Certification Office.

D. Analysis of Revolving Fund

Figure 41: Projected Use of Revolving Fund Authority ($000)

Authority, April 1, 1985		15,000

E. Canada Museums Construction

In 1985-86 the responsibility for payments to the Canada Museums Construction Corporation Inc. will be transferred from Public Works Canada to the Department of Communications. The following provides information as to the purpose, nature and amount of these payments.

Objective

To provide for the construction in the National Capital Region of buildings for the Natinal Gallery of Canada, the National Museum of Man or any other national museum which the Governor-in-Council may direct from time to time, including the acquisition, control, administration and disposal of the lands required for the construction.

Resource Summary

These payments account for 15.5% of the total 1985-86 Communications and Culture Program expenditures.

Figure 44: Payments to Canada Museums Construction Corporation Inc. ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Canada Museums Construction Corporation Inc.	**81,787**	62,000	10,776

Description/Resource Justification

These payments provide the funding to the Canada Museums Construction Corporation Inc., for the operation of the corporation and for the construction costs of the new National Gallery and the National Museum of Man.

The management of the corporation is under the direction of a Board of Directors and executives who are responsible to the Minister of Communications.

Following is a financial summary of the operations of the Corporation over the years.

Figure 45: Canada Museums Construction Corporation Inc. Summary of Expenses ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
National Gallery				
Operating Costs	1,273	1,173	1,279	848
Capital Costs	40,488	34,240	5,143	385
Sub-total	41,761	35,413	6,422	1,233
National Museum of Man				
Operating Costs	1,272	1,173	1,279	848
Capital Costs	38,754	25,414	3,075	495
Sub-total	40,026	26,587	4,354	1,343
Total	81,787	62,000	10,776	2,576
Planned Person-Years	40	40	-	-

Note: The total increase of $19.8 million to funding shown for 1985-86 is the result of increased cash flows due to increased construction activity for 1985-86 (i.e. $81.8 million vs. $62.0 million) for the National Gallery and National Museum of Man.

The payments are primarily for capital expenditures and details of the projects are shown in Figure 46 below.

Figure 46: Major Capital Projects ($000)

Department of Finance Canada

1985–86 Estimates

Part III

Expenditure Plan

841

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Department of Finance
Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are seven chapters in this document. The first provides an introduction to the Department. The other six present the Program Expenditure Plans for each of the Department's programs.

Chapters 2 to 7 begin with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program.

Departmental Summary

Role and Responsibility

The Department of Finance operates under Sections 8-10 of the Financial Administration Act which provides the Minister with the broad responsibility for "the management of the Consolidated Revenue Fund and the supervision, control and direction of all matters relating to the financial affairs of Canada not by law assigned to the Treasury Board or to any other Minister."

The Department of Finance is the central agency of the federal government responsible for advice on the economic and financial affairs of Canada. It is concerned with all aspects of the performance of the Canadian economy. It oversees all government actions affecting the economy to ensure harmony, follows the development of external factors that bear on domestic economic performance, and examines the economic actions taken by other orders of government.

The Department's most visible output is the federal Budget. The budget speech provides an authoritative review of past, present and future economic factors that will affect the country's economic performance and the nation's finances. This document reviews the government's accounts for the past period and presents its fiscal projections for the coming years. These include the government's expenditure program, revenues from existing sources, taxation changes and debt levels.

Departmental Organization and Programs

The Department of Finance oversees six programs which make up the whole of the Public Debt Envelope, the majority of the Fiscal Arrangements Envelope, a portion of the External Affairs Envelope and part of the Services to Government Envelope. These programs are:

- Financial and Economic Policies
- Public Debt
- Fiscal Transfer Payments
- Canadian Import Tribunal
- Inspector General of Banks
- Special

Following is a brief summary of each of these programs. Further information is provided within the respective sections of each Program.

Financial and Economic Policies: This program consists of four activities delivered by six policy branches, the Consultations and Communications Branch and the Administration Branch. This core program is responsible for the development of policies and the provision of advice on a wide range of financial and economic matters and also includes the resources required for the delivery of the Public Debt Program, the Fiscal Transfer Payments Program, the Special Program and for the delivery of payments in respect of Domestic Coinage and to International Financial Organizations.

Public Debt: This program operates under the statutory authority of Part IV of the Financial Administration Act and provides the necessary funds for the interest and servicing costs of the public debt and for the issuing costs of new loans.

Fiscal Transfer Payments: This program, which operates under the authorities of the Constitution Acts 1867 and 1982, the Federal-Provincial Fiscal Arrangements and Established Programs Financing Act, 1977 and other Statutory Authority, provides the necessary funds for transfer payments to the provinces.

Canadian Import Tribunal: This program provides for the operating costs of the Canadian Import Tribunal which is responsible for enforcing the Special Import Measures Act.

Inspector General of Banks: This program provides for the operating costs of the Office of the Inspector General of Banks which is responsible for ensuring that the provisions of the Bank Act and the Quebec Savings Banks Act are being duly observed.

Special Program: This program normally provides the necessary funds for special items that are not related to existing programs.

* Administration Branch provides support services to all departmental programs and to Treasury Board Secretariat and the Office of the Comptroller General of Canada.

Departmental Spending Plan

The Department estimates total expenditures of $31,280,036,000 in 1985-86. Of this, $31,232,777,000 are payments made under statutory authorities and $47,259,000 is in respect of voted expenditures which include $8,369,000 of vote netted revenue.

Appropriation Authority

Authority is sought in these Estimates to spend $42,026,000 in support of the 1985-86 Financial and Economic Policies Program. The remaining expenditures estimated at $260,447,000 will be made under existing statutory authority. This includes budgetary expenditures for the production of domestic coinage, contributions to employee benefit plans and the Minister's salary and motor car allowance and non-budgetary expenditures in respect of the encashment of notes issued to the International Development Association, subscriptions to the International Bank for Reconstruction and Development, and purchase of paid-in shares of the International Finance Corporation.

Section I
Program Overview

A. Highlights

In general terms, the Department of Finance is planning no major departure from its current mandate or relationship with departments/agencies, with the exception that the Department has made provisions to cover certain responsibilities previously under the Ministries of State for Social Development and Economic and Regional Development.

The Department, in support of the Government's mandate for change and the priority of economic renewal, is committed to a consultative process that will forge a better understanding with the private sector and the provinces. The foundation is being laid for a continuing, ongoing dialogue with all the economic players.

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page

International Financial Organizations	210,800	237,700	(26,900)	2-20
	310,842	345,341	(34,499)	
Less: Receipts and Revenues Credited to the Vote	8,369	7,949	420	
	302,473	337,392	(34,919)	
Authorized person-years	811	822	(11)	

The net decrease of $34,919,000 in 1985-86 estimated expenditures over the 1984-85 forecast is primarily the result of:

- a decrease of $26.9 million in the International Financial Organizations (non-budgetary statutory) items;
- a decrease of $3.0 million in the Domestic Coinage (statutory) activity; and
- a decrease of $3.0 million in the Administration activity.

C. Background

1. Introduction

The Financial and Economic Policies Program is one of the six expenditure programs of the Department of Finance Canada. Stated in most general terms, its objective is to support the Minister of Finance in his specific and general responsibilities for government economic policy. The Department deals with the performance of the Canadian economy in all important aspects - the growth and sharing of output, employment and income, the stability of prices, and the long-term development of the country. It is concerned with the harmony of all initiatives of federal departments or agencies which have important impacts on the economy. Finance is concerned with trade and monetary affairs and other international forces bearing on Canada's economic performance. The Department works constantly toward improved co-ordination of economic action between provincial governments and the Government of Canada. Much of the Department's activity consists of representation, negotiation and exchange of information with members of the public, including various organized groups, with national governments and international organizations, with provincial governments and with other federal departments.

This program provides the resources for the management of the Department's two large statutory spending programs, namely, the Public Debt Program and the Fiscal Transfer Payments Program. It also provides - within the Administration activity - the requisite administrative services (e.g. financial, personnel) in support of the Canadian Import Tribunal and the Inspector General of Banks Programs. The Administration Branch component of the Administration activity also provides joint administrative services to the Treasury Board Secretariat and the Office of the Comptroller General; the costs of such services being recovered and vote-netted.

2. Legal Mandate

Section 8 of the Financial Administration Act is the legislative authority which established the Department of Finance. Section 9 assigns responsibility to the Minister of Finance for "the management of the Consolidated Revenue Fund and the supervision, control and direction of all matters relating to the financial affairs of Canada not by law assigned to the Treasury Board or to any other Minister." It is in this context that the Department supports the Minister in his responsibility for the country's economic and financial affairs.

Authority for undertaking the Domestic Coinage activity is vested in the Minister of Finance by Section 8 of the Royal Canadian Mint Act.

The International Financial Organizations activity includes investment in the International Development Association (IDA) authorized by the International Development Association Act and subscriptions to the International Monetary Fund (IMF), the International Finance Corporation (IFC) and the International Bank for Reconstruction and Development (IBRD) authorized by the Bretton Woods Agreement Act.

3. Program Objective

The objective of the Financial and Economic Policies Program is to assist the government in deciding upon and implementing financial and economic policies and programs.

4. Program Organization for Delivery

Activity Structure: The Financial and Economic Policies Program is composed of the following four activities: Financial and Economic Policies, Administration, Domestic Coinage and International Financial Organizations.

Figure 2: Activity Structure

Organization Structure: The Financial and Economic Policies Program is delivered by eight branches and the departmental executive offices. These branches are: Tax Policy and Legislation, Economic Programs and Government Finance, Federal-Provincial Relations and Social Policy, International Trade and Finance, Fiscal Policy and Economic Analysis, Financial Sector Policy, Consultations and Communications, and Administration.

The Administration Branch provides a service shared by the Department of Finance, the Treasury Board Secretariat and the Office of the Comptroller General.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

Activity	$	P-Y	$	P-Y	$	P-Y	$	P-Y	$	P-Y	$	P-Y	$	P-Y	$	P-Y

* Includes resources for Ministers and other executive offices and for Consultations and Communications Branch.
** Responsibility for policy inputs is split between Debt Management Division and Crown Corporations Directorate.

D. Planning Perspective

1. Environment

This program operates in a very dynamic environment. In responding to Government priorities, it is concerned with economic, social, international and intergovernmental issues.

The general state of the economy is the key factor influencing this program's priorities and direction. As economic conditions change, program resources are shifted to accommodate these changes in priorities thereby enabling the Department to respond to the requirement for additional policies.

2. Initiatives

The following specific initiatives will be continued/undertaken during 1985-86:

Consultations and Communications: High priority will continue to be attached to developing a more systematic long term approach to the consultative process and to make government/private sector contacts and consultations a permanent feature of economic policy development. This priority emphasizes the role of open, two-way communications designed to gain the acceptance and support of the private sector and the general public for the government's economic policies. Open communications with the Minister of Finance and his department are a key part of a strategy to explain and support budget and general economic policies throughout the year.

Tax Simplification: A major effort is underway to simplify the tax system. A full review of the small business taxation system has been completed and certain tax simplification proposals have been adopted. Other areas of the tax system that could be candidates for simplification will be identified, and a sequential and ongoing process of simplification over the next few years is envisaged. Consultations with affected groups are planned in order to assist in this process of definition.

Reducing Lag Between Tax Announcements and Detailed Legislation Proposals: Reductions in this lag time are expected to alleviate uncertainty about the application of proposals, aid tax professionals in advising their clients, aid parliamentarians and tax professionals in commenting on the details of proposals and suggesting changes, and possibly increase the speed with which the economy reacts to new tax incentives. While considerable improvements have been made in this area, the Department is developing a number of additional strategies to further reduce the time lag.

Implementation of Revised Tariff Nomenclature: The government is working towards the adoption of a new nomenclature, based on the harmonized system that has been developed in the Customs Co-operation Council in Brussels. The new system will form the basis of both tariff and statistical classification systems, leading to an improvement in the quality of our import statistics as well as simplified administration.

This will require negotiation with our trading partners under the auspices of the General Agreement on Tariffs and Trade (GATT) and consultations with Canadian manufacturers and importers on the details of the new tariff schedules during 1985-86. The adoption of a new system will require changes in Canadian legislation and some adjustment of tariff rates which would be introduced in 1987 or 1988.

Financial Institutions' Regulatory Reform: To facilitate the adaptation of financial institutions to shifting markets and changing economic conditions, the government is planning a full examination of legislation governing financial institutions. The ensuing initiatives would be aimed at enhancing competitiveness and ensuring that public policy goals relating to the soundness of institutions, the stability of the financial sector, and the protection of consumers of financial services are met.

Prior to putting forward legislative proposals, the government is releasing a public discussion paper setting out the issues and providing a general outline of the nature of the proposed legislative changes. The discussion paper would serve as the basis for public consultations with the private sector and with the provincial regulatory authorities.

3. Program Effectiveness

The Department of Finance's objective is to assist the government in deciding upon and implementing financial and economic policies and programs.

To this end, much of the Department's work involves the evaluation of existing programs and measures. For example, the Tax Policy and Legislation Branch is involved in the continual analysis and assessment of existing tax measures. These in-depth evaluations must be undertaken if the Branch is to be in a position to propose that these measures be increased, extended, modified or terminated.

The Federal-Provincial Relations and Social Policy Branch is also involved in a similar process in so far as the Federal-Provincial Fiscal Arrangements and Established Programs Financing Act is concerned. This Act, which is the legislative authority governing the majority of expenditures made under the Fiscal Transfer Payments Program, undergoes a continual review and is subsequently amended every five years.

Other branches concern themselves with the review of proposals emanating from all departments and agencies, determining the impact, and advising on the financial and economic implications of such proposals.

Section II
Analysis By Activity

A. Financial and Economic Policies

Objective

To develop policies and provide advice pertaining to the financial and economic aspects of:

- the domestic and international economic situation and outlook;
- the Government's overall fiscal framework, expenditure plan and resource allocation;
- government borrowing and debt management;
- the Canadian tax system;
- the economic and fiscal implications of government programs including loans, investments and guarantees of the Crown;
- federal-provincial fiscal and economic relations; and
- tariffs, international trade, development assistance and international financial relations.

Resource Summary

The Financial and Economic Policies Activity accounts for 10.6 percent of the 1985-86 Financial and Economic Policies Program expenditures and 58.7 percent of total person-years. 76.3 percent of the expenses for this activity pertain to personnel costs and the remaining 23.7 percent provides mainly for the costs of professional and special services.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Fiscal Policy and Economic Analysis	6,875	107	7,836	134	(961)	(27)
Financial Sector Policy	2,449	40	-	-	2,449	40
Federal-Provincial Relations and Social Policy	3,590	60	3,511	60	79	-

International Trade and Finance	4,626	75	5,089	87	(463)	(12)
Economic Programs and Government Finance	6,534	81	7,694	100	(1,160)	(19)
	32,140	476	31,487	488	653	(12)

Description

This activity can best be described in terms of its six sub-activities:

Fiscal Policy and Economic Analysis: Is involved in providing analysis of current and future economic developments, in determining the general budgetary and fiscal policy stance of the government, and in advising the Cabinet Committee on Priorities and Planning on the level and broad allocation of the medium-term fiscal framework.

Financial Sector Policy: Is responsible for policy analysis and advice with respect to the financial sector, including management of the federal government's borrowing program, the functioning of Canadian financial markets and institutions and the macro-economic impact of interest rates and the exchange rate.

Federal-Provincial Relations and Social Policy: Advises on policies and programs concerning fiscal federalism in Canada; monitors, administers and advises on federal-provincial fiscal arrangements; and advises on economic, fiscal and financial aspects of social programs.

Tax Policy and Legislation: Undertakes analyses of and makes recommendations relating to tax policy and is responsible for maintaining a tax system that raises revenue in a fair and equitable fashion and effectively targets incentives to meet governmental goals. It also seeks to develop tax policies consistent with the government's objectives in other areas - social, cultural, economic, political, regional, and federal-provincial.

International Trade and Finance: Is responsible for analyzing and making recommendations on Canadian Customs Tariff and other legislation governing imports; policies on international trade, investment and economic cooperation; and international development assistance and export financing.

Economic Programs and Government Finance: Is responsible for recommending and advising on economic, fiscal and financial implications of government economic programs. It is responsible for the formulation of policy concerning loan investments and guarantees of the Crown as well as the approval of capital budgets and financial structures of wholly-owned corporations.

B. Administration

Objective

To provide executive direction for the Department; consultations and communications; and financial, personnel and administrative services.

Resource Summary

The Administration Activity accounts for 4.8 percent of the 1985-86 Financial and Economic Policies Program expenditures and 41.3 percent of total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Administration	22,902	335	28,154	339	(5,252)	(4)
Less: Receipts and Revenue credited to the Vote*	8,369		7,949		420	
	14,533	335	20,205	339	(5,672)	(4)

* Operating expenditures recovered from Treasury Board and the Office of the Comptroller General.

Description

This activity includes provision for the offices of the Minister, Minister of State, Deputy Minister, Associate Deputy Minister, Senior ADMs, Consultations and Communications and for financial, personnel and administrative services.

Activities of the Consultations and Communications Branch include direction of departmental responses to Access to Information and Privacy requests; preparation of major speeches; organization of extensive programs of Ministerial and official level consultations; conducting an information and media relations program of departmental and Ministerial announcements, special briefings, arrangements for meetings and news conferences; and management of a broad array of conferences and visits.

The Administration Branch component of this Activity provides the requisite financial, personnel and administrative services in support of (i) the other activities within this Program; (ii) the other programs within this Department, i.e., the Public Debt Program, the Fiscal Transfer Payments Program, the Canadian Import Tribunal Program, the Inspector General of Banks Program, and the Special Program; (iii) all programs of Treasury Board Canada; and (iv) all programs of the Office of the Comptroller General of Canada.

Joint administrative services provided to Treasury Board and the Comptroller General are recovered on the basis of the TBS/OCG share of the total person-year population of the three departments, such recoveries being vote-netted.

C. Domestic Coinage

Objective

To provide funds for the production of domestic coinage.

Resource Summary

The Domestic Coinage Activity accounts for 14.9 percent of all 1985-86 Financial and Economic Policies Program expenditures.

Figure 6: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Domestic Coinage*	45,000	48,000	(3,000)

* Represents gross costs for production and sale of coinage; gross sales receipts are credited directly to the Consolidated Revenue Fund

Description

While the Royal Canadian Mint Act assigns responsibility for the production, storage and movement of bullion and coinage to the Mint, it assigns legal title of coins of the currency of Canada to the Minister of Finance. It also authorizes the Minister of Finance to make payments out of the Consolidated Revenue Fund for costs relating to the production and shipment of coins and to deposit proceeds from the sales of such coins into the Consolidated Revenue Fund.

The Domestic Coinage Activity provides funds for the payment of:

- the production of coins; and
- the costs of storage, preparation and movement of coins of the currency of Canada.

The primary results of this Activity are the timely production and delivery of domestic coins of the currency of Canada in response to demands of the Canadian banks and various financial institutions.

Responsibility for policy inputs is split between Crown Corporations Directorate and Debt Management Division (Financial Sector Policy Branch) while the Administration Branch is responsible for administering payments, revenues and inventories.

Revenue is generated from the sale of coins at face value to chartered banks.

Figure 7: Sales and Cost Analysis ($000)

	1983-84	1982-83
Coinage Sales	54,313	52,992
Production Costs	21,123	30,969
Other Costs	1,375	1,830
Net Profit	31,815	20,193

NOTE: The production costs for 1983-84 have decreased substantially due to a build-up of inventories at year end 1982-83.

D. International Financial Organizations

Objective

To provide funds for the payment of Canada's subscriptions and obligations to various international organizations.

Figure 8: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Change
International Development Association	195,100	207,000	(11,900)
International Bank for Reconstruction and Development	9,200	30,700	(21,500)
International Finance Corporation	6,500	-	6,500
	210,800	237,700	(26,900)

Description

The International Development Association (IDA) is an affiliate of the World Bank and lends resources for development projects in the world's poorest countries on highly concessional terms.

There have been six replenishments to the IDA fund since it was founded in 1960 and Canada has participated in all six. Contributions to IDA are usually made in the form of non-negotiable, non-interest bearing demand notes. The statutory item in the Estimates for IDA represents the drawdown of these notes by IDA as required to fund its projects throughout the world.

The International Bank for Reconstruction and Development (IBRD), usually referred to as the World Bank, is the single largest and most important source of development financing in the world. IBRD operates on much the same principles as a commercial bank, except that it does not accept deposits. Some 143 countries, including all major countries except the USSR, belong to the World Bank. The member countries of the Bank purchase shares in the Bank, a portion of which is paid-in when the shares are purchased and the remainder is considered callable when required by the Bank. The Bank then lends the funds it receives and borrows additional resources on the world financial markets against its callable capital in order to assist economic development. Because the bulk of the World Bank's resources are raised on the financial markets, its lending terms closely reflect commercial rates.

The statutory item in the Estimates for IBRD relates to payments for World Bank shares subscribed to by Canada as part of the 1979 General Capital increase of the World Bank.

The International Finance Corporation (IFC) is another affiliate of the World Bank Group. Canada subscribes to the capital of the IFC and total authorities granted to date were for the purchase of 20,952 paid-in shares. The purpose of the IFC is to further economic development by encouraging the growth of productive private enterprise in member countries, particularly in less developed areas, thereby supplementing the activities of the IBRD.

The International Finance and Development Division of the International Trade and Finance Branch is responsible for coordinating Canada's participation in IDA, IBRD and IFC.

The Bank of Canada acts as Canada's depository and banker for IDA, IBRD and IFC. It maintains a Canadian dollar account and a security account for IDA, IBRD and IFC.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 9: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Professional and special services	7,288	8,165	8,170
Rentals	1,837	1,980	1,073
Purchased repair and upkeep	581	1,208	647
Domestic coinage	45,000	48,000	22,499
Other utilities, materials and supplies	1,248	1,365	1,251
All other expenditures	-	-	262
	62,210	70,585	42,149
Total operating	99,749	106,627	75,435
Capital	293	1,014	1,191
Less: Receipts and revenue credited to the Vote*	8,369	7,949	7,568
Net expenditures	91,673	99,692	69,058

* Operating expenditures recovered from Treasury Board Canada and the Office of the Comptroller General

2. Personnel Expenditures

Figure 10: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	115	74	69	50,350 - 96,300	66,700
Scientific and Professional	236	287	277	14,911 - 88,120	45,500
Administrative and Foreign Service	184	190	169	12,766 - 63,870	37,900
Technical	39	38	36	12,635 - 57,764	30,900
Administrative Support	230	230	246	12,636 - 37,130	22,100
Operational	7	8	7	13,253 - 39,988	20,400

NOTE: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 11: Net Program Cost ($000)

	1985-86 Operating Expendi-tures	Add Capital	Add Other Costs*	Total Cost	Deduct Revenue	Total Net Costs 1985-86	Total Net Costs 1984-85
Financial and Economic Policies	99,749	293	5,473	105,515	8,369**	97,146	104,995

* Other costs include services provided without charge by Public Works and other departments.

** Operating expenditures recovered from Treasury Board and the Office of the Comptroller General.

C. Revenue Analysis

Figure 12 provides a listing of the non-tax revenue generated by the program. These revenues are credited to the Consolidated Revenue Fund and are not available for use by the Program.

Figure 12: Revenue by Source ($000)

	1983-84	1982-83
Return on Investments Loans, Investments and Advances	2,956,915	3,321,320
Refunds of previous years' expenditure	2,444	15,317
Bullion and coinage	55,700	53,817

	25,545,000	22,660,000	2,885,000	

B. Background

1. Introduction

The public debt is a residual program in that it represents the cost of issuing or maintaining the borrowings required to fund all other government programs and initiatives. Public debt interest is paid on the gross federal debt which includes:

- unmatured debt, consisting of domestic marketable bonds, treasury bills, Canada Savings Bonds, foreign borrowings and federal investments in the Canada Pension Plan Investment Fund less the government's own holdings of these instruments;

- superannuation accounts, which include the Public Service Superannuation Account, the Canadian Forces Superannuation Account, the RCMP Superannuation Account, and the Supplementary Retirement Benefits Account; and

- other categories, including the Canada Pension Plan Account, various deposit and trust accounts, uncashed interest and matured debt, special year-end accounts, and miscellaneous liabilities.

2. Legal Mandate

The legal mandate for this program is set out in Part IV of the Financial Administration Act which describes the requirement for Parliamentary authority for all borrowings and provides the general authorities governing the incurrance and management of the public debt.

3. Program Objective

The objective of the Public Debt Program is to provide funds for the interest and servicing costs of the public debt and for the issuing costs of new borrowings.

4. Program Organization for Delivery

Organization: The Program does not contain administration resources which are instead contained in the Financial and Economic Policies Program. The Financial Sector Policy Branch is responsible for managing the federal government's domestic and foreign debt program while the Bank of Canada is the chief issuing and redemption agent in respect of the domestic debt.

5. Program Description

The Program is divided into two activities which reflect the different purposes for which expenditures are made.

Interest Costs: This activity provides for the following interest charges:

- Interest on Unmatured Debt Payable in Canada: includes interest costs associated with domestic marketable bonds, treasury bills, Canada Savings Bonds, and federal investments in the Canada Pension Plan Investment Fund less the government's own holdings of these instruments.

- Interest on Unmatured Debt Payable in Other Countries: includes interest charges on foreign borrowings in the form of marketable bonds, bank and other loans denominated in foreign currencies.

- Interest on Other Liabilities: includes interest charges with respect to the Public Service Superannuation Account, the Canadian Forces Superannuation Account, the RCMP Superannuation Account and the Supplementary Retirement Benefits Account; Canada Pension Plan Account, various deposit and trust accounts, uncashed interest and matured debt, including Canada Savings Bonds and marketable bonds, special year-end accounts and miscellaneous liabilities.

Servicing and Issuing Costs: This activity provides for costs incurred in redeeming and transferring bonds, commissions for cashing coupons and for payment of registered interest, commitment fees on the undrawn balance of the standby credit arrangements and also provides for bond discount, premiums and commissions, advertising, administrative, legal, printing and distribution costs.

	5,426,822	5,686,029	(259,207)	

B. Background

1. Introduction

The Fiscal Transfer Payments Program provides funds which are paid to the provinces under a number of statutory authorities, the most important of these being the Federal Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act. The purpose of Part I of this Act is to allow all provinces, irrespective of their fiscal capacity, to deliver an acceptable level of services. The Act is reviewed and revised every five years following consultations with the provinces.

Federal financial, economic, tax and other policies bear heavily on negotiations concerning statute revisions and, in turn, the statutory provisions governing the levels of transfer payments are an important factor in determining the fiscal framework.

Policies and negotiations which culminate in arrangements under which payments are made or the formulae by which actual payments are to be calculated are the responsibility of the Financial and Economic Policies Program.

2. Legal Mandate

Payments to the provinces and territories through the Fiscal Transfer Payments Program are authorized principally under the following statutes: Constitution Act, Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977, Public Utilities Income Tax Transfer Act and the Federal Provincial Fiscal Revision Act.

3. Program Objective

The objective of the Fiscal Transfer Payments Program is to provide funds for payments to provincial governments under various statutory authorities.

4. Program Organization for Delivery

Activity Structure: The program consists of one activity which is divided into five sub-activities so as to reflect the different purposes and authorities under which payments are made.

Figure 2: Activity/Sub-Activity Structure

Organization Structure: Amounts of transfers and the timing of payments are specified by statute or in regulations made pursuant to statute. Administration of the statutes and calculation of payments is the responsibility of the Federal-Provincial Relations Division. Payments processing is carried out by Financial Services Division.

5. Program Description

Statutory Subsidies: are unconditional payments by the government of Canada to the governments of the provinces. The subsidies were established by the Terms of Confederation and subsequent arrangements as new provinces entered Confederation. Payments commenced in 1867 and are payable in perpetuity, subject only to further constitutional amendments. There are four classes of payments:

- allowances to support provincial governments and legislatures;
- per capita allowances;
- interest on provincial debt allowances; and

- special grants and allowances.

The BNA Act specifies that subsidies payable to the provinces be adjusted on the basis of the provincial population determined in each decennial census. For the Prairie provinces, population adjustments are made more frequently, as provided in the legislation establishing the provinces, in recognition of their rapid growth when they joined Confederation. Subsidies payable under other Acts are similarly specified.

Fiscal Equalization: is a program of unconditional transfer payments to fiscally-disadvantaged provinces. The provisions of Part I of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977 were amended in 1982 for a five year period. The equalization formula specified in the statute produced a comprehensive measure of each province's capacity to derive revenue from taxation. This is compared against an equalization standard based on the average of the capacities of British Columbia, Saskatchewan, Manitoba, Ontario and Quebec.

Provincial equalization entitlements are determined by statutory formula. A province's entitlement is equal to its population multiplied by the positive difference, if any, between the per capita provincial yield from a representative tax system (defined by statute) and the average per capita yield of that system in the five standard provinces.

Reciprocal Taxation: is a program whereby the federal government remits (directly or indirectly) to participating provinces, payments in lieu of provincial taxes and fees (includes provincial general sales taxes, motor fuel, tobacco and amusement taxes, and motor vehicle registration fees) on its consumption or use of goods and services. In return, the participating provincial governments pay federal sales and excise taxes on their purchases of goods.

The Public Utilities Income Tax Transfer: program was originated in 1948 at which time the level of transfer was set at 50 percent of federal tax paid by investor-owned public utilities. Since the enactment of the Public Utilities Income Tax Transfer Act in 1966, unconditional statutory payments of 95 per cent of the federal income tax paid by investor-owned public utilities on income derived from the generation and/or distribution to the public of electrical energy, natural gas and steam are made to the province.

Youth Allowances Recovery: is calculated as three percent of the Federal Tax payable in the province of Quebec with respect to the fiscal year. The amount included in Estimates is based on the forecast Federal Tax payable.

Section I
Program Overview

A. Highlights

The Canadian Import Tribunal, formerly the Anti-dumping Tribunal, has established the following major goals for the 1985-86 fiscal year:

Injury Inquiries: To conduct under new inquiry procedures an increased number of inquiries to determine whether dumped or subsidized imports into Canada are injurious to the domestic industry.

References and rulings: On request, to provide advice on the question of evidence of material injury at the initiation or investigation stages of a case by the Deputy Minister of National Revenue, Customs and Excise, and to issue rulings as to which of two or more persons is the importer of the subject goods on which duties are payable.

Reviews: To review annually during the next three years at least 20 of the material injury findings which were issued under the former Anti-dumping Act and which remain in effect under the Special Import Measures Act. On December 31, 1984, some 66 findings of material injury were in effect, some of which dated back to the 1970s.

B. Financial Summary

Canadian Import Tribunal	2,464	1,981	483	5-9
Authorized person-years	41	35	6	

C. Background

1. Introduction

The Canadian Import Tribunal is an independent, statutory quasi-judicial tribunal established under the Special Import Measures Act to inquire as to whether the importation of goods is causing material injury to Canadian industry or is retarding the establishment of production in Canada and to determine appropriate action. These inquiries result in the issuance of findings or reports by the Tribunal. Findings establish the basis under which National Revenue, Customs and Excise, levy anti-dumping or countervailing duties and reports assist the government in determining whether safeguard action should be taken respecting other imports.

2. Legal Mandate

The Canadian Import Tribunal derives its authority from the Special Import Measures Act, which replaced the 1969 Anti-dumping Act. The Special Import Measures Act came into force on December 1, 1984. It was designed to modernize and streamline Canada's previous anti-dumping and countervailing legislation, and to bring it into conformity with its international obligations. In the case of dumping, we refer to the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade (the Anti-Dumping Code), and in the case of subsidization, to Article 6 of the Subsidies and Countervailing Duties Agreement (the Subsidies and Countervailing Duties Code). These agreements were negotiated under the auspices of the GATT "Tokyo Round" of multilateral tariff negotiations and signed by Canada in 1979. Countries adhering to these agreements are obliged to ensure that their anti-dumping and countervailing legislation and practices are not in conflict with the criteria and procedures set out in the Codes.

3. Program Objective

To determine whether dumped or subsidized imported goods are injuring Canadian producers and to inquire into other matters in relation to injurious imports that are referred to it by the Governor in Council.

4. Program Description

The investigation and conduct of hearings including inquiries to determine the existence of material or serious injury to Canadian industry due to the importation of goods.

5. Program Organization for Delivery

The Canadian Import Tribunal reports to the Minister of Finance. The Tribunal is a court of record which conducts several types of proceedings, generally in a quasi-judicial fashion. The Tribunal consists of five regular members, to which may be added up to five temporary members. It is supported by a secretariat, which provides support services and by a research unit, which conducts economic studies.

The Tribunal is located in Ottawa. In arriving at its decisions, the Tribunal receives representations, hears evidence and holds public hearings. Although hearings normally are held in Ottawa, they may be held anywhere in Canada.

D. Planning Perspective

1. Environment

Economic Conditions: The economic climate is the key environmental factor which affects the Tribunal's activities. As international economic conditions deteriorate, there is a tendency for Canadian manufacturers to lodge more complaints with National Revenue Canada, Customs and Excise, thereby resulting in more preliminary determinations of dumping or subsidization and hence more inquiries by the Canadian Import Tribunal.

2. Initiatives

The Canadian Import Tribunal, in the upcoming year, plans to make significant changes to its inquiry procedures to bring them into conformity with the new legislation and to discharge efficiently its statutory responsibilities. A significant increase in workload is anticipated as a result of the passage and proclamation of the Special Import Measures Act in 1984. With an enhanced awareness on the part of Canadian manufacturers of the recourse provided by the Special Import Measures Act against unfair import competition, an increase in the Tribunal's workload is anticipated.

3. Program Effectiveness

In the context of current government trade policy, criteria for measuring the effectiveness of the Canadian Import Tribunal Program must be related to its objective of determining whether dumped or subsidized imported goods are injuring Canadian producers and the inquiring into other matters related to injurious imports. This is achieved by conducting inquiries to determine the degree of injury, if any, or the potential injury to any Canadian manufacturer or industry as a result of the dumping or subsidization of foreign goods. The result of this process is the issuance of findings with respect to material injury. In cases where the Tribunal finds material injury due to dumping, anti-dumping duties are levied by National Revenue, Customs and Excise, in the amount of the difference between the export price and normal value in the country of export. These duties, however, may be reduced or eliminated by the government if upon report by the Tribunal they are deemed not to be in the public interest.

The Tribunal may review its affirmative findings of injury at any time, on its own initiative or upon an application which it finds has merit, and may alter, continue or rescind its findings. If a finding is not reviewed and continued by the Tribunal within five years of its date, the finding lapses. If a finding is reviewed and maintained in force, subject to alteration, if any, the five year rule will again apply, subject to earlier review.

4. Performance Information/Resource Justification

The expenditures for the Canadian Import Tribunal consist primarily of salaries and the direct expenses of its employees.

The current level of resources was established to enable the Tribunal to carry out the following activities which relate directly to the fulfillment of the statutory responsibilities:

- References (Sections 33, 34 and 35 of the Act) - When the Deputy Minister of National Revenue, Customs and Excise, decides not to proceed with a dumping or subsidization investigation because the evidence does not disclose to his satisfaction that material injury or retardation has occurred or will occur, the Deputy Minister or the complainant may refer this question to the Tribunal. The Tribunal then decides whether there is sufficient indication of injury to cause an investigation to be continued. If a formal investigation is launched by the Deputy Minister, the exporter, importer or government of the country of export may refer the matter to the Tribunal as to whether there is a reasonable indication of injury in an attempt to determine the investigation.

- Injury Inquiries (Section 42 of the Act) - These are economic inquiries involving the examination of a wide variety of factors and the formulation of findings by the Tribunal as to whether the importation of dumped or subsidized goods is materially injurious to Canadian producers of like goods. Findings of the Tribunal that such imports are the cause of material injury result in the imposition of anti-dumping or countervailing duties by National Revenue, Customs and Excise. In addition, pursuant to Section 45 of the Special Import Measures Act, the Tribunal reports to the Minister of Finance if it finds that the imposition of duties would not or might not be in the public interest.

- Governor in Council Inquiries (Section 48 of the Act) - The Tribunal is asked to inquire into and report on matters referred to it by the Governor in Council. These inquiries are generally more extensive and far-ranging than injury inquiries. Imports of service are now also included in this type of inquiry under the Special Import Measures Act.

- Reviews (Section 76 of the Act) - The Tribunal may, on its own initiative or at the request of the Deputy Minister of National Revenue, Customs and Excise, or any person or government, review its findings and may rehear any matter in this process.

- Importer Rulings (Section 89 of the Act) - The Tribunal may be asked to rule on the question as to which of two or more persons is the importer of goods on which duty is payable.

- Reconsiderations (Section 91(1)(g) of the Act) - The Tribunal may reconsider any finding it has made when its ruling as to who is the importer identifies a person other than the one specified by the Deputy Minister of National Revenue.

Figure 2: Distribution of Workload (Under the Anti-dumping Act)

	Section 16 Dumping	Section 16.1 Governor in Council	Section 31 Reviews	Section 13 References	
Calendar Year	Findings Issued(1)	Reports Issued(2)	Review Findings and Alterations	Referrals	Total
1979	14	-	6	2	22
1980	13	-	6	1	20
1981	11	1	7	1	20
1982	15	-	4	1	20
1983	19	1	8	1	29
1984	16	2(3)	13	2	33

(1) There were 66 findings of material injury due to dumping in effect at December 31, 1984.
(2) The 1983 and 1984 reports related to subsidized imports.
(3) Does not include inquiry with respect to the footwear and skate industry which was in progress at year end. Hearings have been held and the report is to be completed in June 1985.

Section I
Program Overview

A. Highlights

The Inspector General of Banks has established the following major goals for 1985-86.

Bank Inspections: The Inspector General will conduct inspections of 72 banks to determine their financial condition and to ensure compliance with the Bank Act and the Quebec Savings Banks Act.

Licencing and Examination of Foreign Banks' Subsidiaries and Representative Offices: The Inspector General will administer the licencing and conduct examinations of foreign banks' subsidiaries to ensure that business practices are consistent with Canadian standards. The Office will also monitor the activities of 73 representative offices of foreign banks to ensure that they are operating within Canadian regulations.

B. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Inspector General of Banks	2,319	1,748	571	6-9
Authorized person-years	42	33	9	

C. Background

1. Introduction

The Inspector General of Banks has the statutory responsibility for the administration of the Bank Act and the Quebec Savings Banks Act. This entails, with respect to chartered banks, the general administration of the Acts, supervision of compliance with the Acts and Regulations by the banks and the supervision and inspection of banks to assess their solvency and to ensure the protection of depositors and shareholders. In addition, the Inspector General advises the Minister on policy matters relating to banks and the banking system, recommends, as necessary, changes to the Acts and related Regulations and provides assistance to the public in the provision of information regarding banks and the Act and in the resolution of disputes with banks. This program is administered independently of the other programs in the Department of Finance.

Under Section 247 of the Bank Act, the costs of operating the Office of the Inspector General of Banks are recovered from all banks operating in Canada. These recoveries are credited to the Consolidated Revenue Fund in the subsequent fiscal year and are not available for use by the Program.

2. Legal Mandate

The Inspector General receives his mandate under Part IX of the Bank Act and Section 56 of the Quebec Savings Banks Act.

3. Program Objective

To ensure that the provisions of the Bank Act and the Quebec Savings Banks Act are being duly observed so that the confidence of the public in the Canadian banking system is sustained.

4. Program Description

The administration of Bank Act, and the conduct of examinations and inquiries into banking activities to ensure adherence to the provisions of that Act and the Quebec Savings Banks Act and that banks are in sound financial condition.

5. Program Organization for Delivery

The Office of the Inspector General of Banks has its headquarters in Ottawa and has a staff of 42 person-years. The Inspector General reports to the Minister of Finance and is appointed by the Governor-in-Council. The Office receives administrative support services from the Department of Finance. A single activity comprises the program.

D. Planning Perspective

1. Environment

Economic Conditions: The Inspector General of Banks attempts to encourage a balance and degree of diversity in the various ventures that banking institutions engage in so that there is minimum risk to the solvency and reputations of these institutions.

During periods when the economy is going through a period of adjustment, both domestically, nationally or on a regional basis and abroad, there can be a serious erosion of the financial positions of governments, corporations and individuals which may result in the reduced credit worthiness of certain classes of borrowers. The Inspector General will in times such as these most strongly encourage banks to diversify their lending activity to avoid concentrations of loans to a small number of large borrowers or to a few specific sectors of the economy. He will also insist that banks maintain prudent previsions against losses on loans, appropriate levels of liquid assets and adequate capital and reserves.

2. Initiatives

The Inspector General of Banks does not plan to make any major changes to either the content or the thrust of the Program in the upcoming year. The Office is however constantly striving to up-grade its supervisory practices to respond to changing domestic and international conditions and has undertaken the following initiatives:

Upgrading Computer Based Information System: Improvements to the computer based information system to assist the analysis of the financial positions of banks will be undertaken in the 1985-86 fiscal year.

Monitoring Procedures/Guidelines: The Inspector General will in the 1985-86 fiscal year be reviewing its definitions and procedures regarding capital adequacy, further developing procedures for the assessment of the adequacy of liquidity, and its definition and disclosure guidelines with respect to non-performing loans and the setting up of provisions against such loans.

3. Program Effectiveness

Criteria for measuring the effectiveness of the Inspector General of Banks Program must be related to its objective of ensuring that the provisions of the Bank Act and the Quebec Savings Banks Act are being duly observed by the Banks. This is being achieved by conducting annual

or more frequent inspections of each incorporated bank to assess their financial conditions and to ensure compliance with the Acts. The inspection process may lead to the prescribing of remedial action to correct unsatisfactory conditions found to exist in any bank.

Another measure of effectiveness is the number of public inquiries on banking activity that are received and responded to. As the public has become more aware of the role of the Inspector General of Banks, it has used the Office as a focal point to lodge complaints and to gain information on a broad range of banking matters. The proper and timely handling of these inquiries will have a positive effect on the public perception of the banking system.

In essence the intended impact of the program is to ensure that banks individually and collectively remain solvent thereby sustaining a high degree of confidence in the Canadian banking system in Canada and internationally.

4. Performance Information/Resource Justification

The expenditures for the Inspector General of Banks Program consist primarily of salaries and the direct expenses of its employees.

The current level of resources was established to enable the office to carry out the following activities which relate directly to the fulfillment of the statutory responsibilities of the office:

- receive, review, assess and make recommendations on applications for the incorporation of new banks;
- receive, review, assess and make recommendations on requests for additional deemed authorized capital i.e.: market share;
- complete the formulation and promulgation of Regulations under the two Acts;
- carry out the necessary supervision and inspection of the banks as required by the Acts;
- implement and apply procedures to monitor the compliance with the Acts, regulations or other directives by banks and others;
- develop, implement and monitor information systems necessary for efficient and effective supervision of banks;
- provide assistance to the public on matters relating to the Acts and the activities of banks; and
- provide advice and input to questions of policy with respect to banks, other financial institutions and the financial system.

There is a direct relationship of person-years to workload and any considerable increase in workload especially concerning the number of banks requiring inspection, the number and complexity of compliance questions and the number of public inquiries could result in additional resources being required.

Figure 2: Comparative Workload Statistics

	1984-85	1983-84	1982-83	1981-82
Inspections: - Person-days	2,250	2,000	1,500	1,400
- Domestic (1)	25	20	16	11
- Foreign (1)	65	60	55	28
Incorporations (2)	5	13	48	-
Public Inquiries (3)	2,000	927(est)	540	-
Legislative Reform (4)	-	2	6	11

(1) The number of compulsory annual bank inspections has been increasing in direct relation to the number of new banks being incorporated.

(2) The number of new banks being incorporated has tapered off as the majority of foreign banks have now been incorporated.

(3) These figures are based on estimates.

(4) In 1985-86 changes to banking legislation will be influenced by changes to legislation governing non-bank financial institutions.

Program Overview

A. Background

1. Introduction

The Special Program is used to finance special requirements not specifically related to the other programs in the Department of Finance. The 1985-86 expenditure plan includes items for Contributions to the Foreign Claims Fund and Advances to the Saint John Harbour Bridge Authority.

2. Legal Mandate

The Foreign Claims Fund was established by the Minister of Finance in accordance with Vote 22a of Appropriation Act No. 9, 1966 and payments to the Fund are authorized by annual appropriations.

The Government of Canada signed an agreement in 1966 with the Province of New Brunswick, the City of Saint John, and the Saint John Harbour Bridge Authority. Advances by Canada are authorized by appropriations.

3. Program Description

Contributions to the Foreign Claims Fund: The Foreign Claims Fund was established by the Minister of Finance in 1966 to receive certain moneys from the custodian of Enemy Property and later from the governments of Bulgaria, Romania, Hungary, Poland, Czechoslovakia and most recently from Cuba and China for nationalized property of Canadians. These moneys are then used to pay Canadian claimants for losses suffered. In June, 1970, the Foreign Claims Commission was established to review and investigate claims for losses and to recommend awards to claimants. At that time it was agreed that the Government of Canada would pay the costs for developing its regulations and procedures in the amount of $40,000 plus one half of the annual operating costs of the Foreign Claims Commission.

Advances to the Saint John Harbour Bridge Authority: The agreement regarding the construction and financial operation of the Saint John Harbour Bridge was signed in July 1966 by the Government of Canada, the Province of New Brunswick, the City of Saint John, and the Saint John Harbour Bridge Authority. The terms of the agreement provide that operating deficits are covered by advances from Canada in return for which Canada received (i) interest-earning debentures to finance repayment of debt principal, and (ii) non-cumulative interest-bearing notes to cover operating cash shortfalls and to finance payment of debt interest. The agreement expires when all the Authority's debt has been

M-9

repaid or in the year 2021 (51 years after the issuance of its debentures), whichever comes first. The advances from Canada were made under authority of a $10 million non-lapsing Department of Finance vote in the Supplementary Estimates of 1965-66 (E) and lapsing votes in 1982-83, 1983-84 and the current year. In recent years, there have been no operating losses; however, a significant portion of the debt servicing is still not being met from operating revenues.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Department of Insurance Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts, provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $12,262,000 in support of the 1985-86 Department of Insurance Program. The remaining expenditures, estimated at $1,244,000 for employee benefits, will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Department of Insurance does not plan any major change in either the nature or direction of its Program in 1985-86. Emphasis will be on continuing the following initiatives undertaken during previous fiscal years:

- to continue with the review of the scope and emphasis of systems and procedures used to monitor those financial institutions for which the Department is responsible (see page 18); and
- to continue with the work required for the revision of the legislation respecting supervised companies (see page 12).

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Supervision of Companies	10,002	10,052	(50)	15
Actuarial and Other Services	1,546	1,416	130	21
Administration	1,958	1,847	111	24
	13,506	13,315	191	
Person-years	226	214	12	

Explanation of Change: The financial requirements for 1985-86 are 1% or $191 thousand higher than the 1984-85 forecast expenditures. The increase is required for:

	($000s)
• provision for salary increases	543
• increased operating costs	23
• more complete utilization of authorized person-years	450
• reduction in administrative expenses expected to be incurred in connection with the liquidation of Pitts Insurance Company and Cardinal Insurance Company (see page 19 for further details)	(825)

Explanation of 1984-85 Forecast: The 1984-85 forecast is $550 thousand or 4% higher than the 1984-85 Main Estimates of $12.8 million (see Extracts from Part II of the Estimates, page 4). The difference is the net of additional resources of $1,000,000 being sought through Supplementary Estimates to meet higher than expected expenses in 1984-85 in connection with the liquidation of Pitts Insurance Company and Cardinal Insurance Company, and a saving of $450 thousand resulting from an anticipated underutilization of authorized person-years.

B. Recent Performance

1. Highlights

The Department's supervisory function was strengthened by an increase in authorized person-years of 11 between fiscal year 1982-83 and fiscal year 1984-85 (from 154 in 1982-83 to 161 for 1983-84 to 165 for 1984-85).

During the period under review, the Department allocated resources in such a manner as to emphasize the monitoring of companies having weaker financial positions than average. Particular attention has been paid to companies with significant investment activities in Western Canada having regard for the continued depressed economic situation in that area of the country. More frequent examinations of such companies were conducted by the examination staff and professional real estate appraisal services were used more extensively to assist in determining current values of real estate investments and mortgage loans (see page 13).

In the property and casualty area, the Department has developed proposals for strengthening the legislative provisions, in the context of experience gained from the recent failures of three companies, and these proposals have been under discussion with the industry. The Department has also taken steps to increase the frequency of monitoring companies' financial positions so that adverse trends can be detected and discussed with company officials on a more timely basis.

More detailed information is being sought with regard to reinsurance arrangements and this is also being analyzed in an effort to recognize potential weaknesses before serious problems develop (see page 13).

In the life insurance area, the Department has reallocated existing resources to permit more intensive review and study of the appropriateness of the actuarial methods and assumptions used by the companies for their various blocks of business (see page 13).

Work has continued on drafting proposals for revisions to the legislation relating to the financial institutions supervised by the Department. Although the drafting of sections dealing with a number of major policy issues, particularly those relating to powers, has been deferred pending decisions by the government on the future direction in which financial institutions should be permitted to evolve, work on drafting of provisions not touching on these major policy issues has been able to proceed.

The Department of Insurance is actively participating with the Department of Finance and other interested parties in a review of the major policy issues related to the future direction of financial institutions and the legislation governing their operations.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Supervision of Companies	10,093	9,125	968
Actuarial and Other Services	1,354	1,366	(12)
Administration	1,674	1,663	11
Civil Service Insurance actuarial liability adjustment	329	-	329
	13,450	12,154	1,296

Explanation of Change: The difference between actual expenditures and Main Estimates as shown above is primarily the result of 1983-84 administrative expenses related to the winding-up of Pitts Insurance Company and Cardinal Insurance Company being about $1.24 million higher than forecast. This additional expense was offset by savings in salary costs resulting from an underutilization

of authorized person-years in 1983-84. The required additional resources were approved through Supplementary Estimates. The difference is also due to a statutory actuarial liability adjustment, made annually to the Civil Service Insurance Account to bring the balance in the account up to the amount of the liabilities of the account determined by an actuarial valuation as of the end of each fiscal year. The adjustment is made pursuant to provisions of the Civil Service Insurance Regulations. The amount of $329 thousand was the adjustment required as of March 31, 1983 (see also page 25).

C. Background

1. Introduction

The Department of Insurance is the organization responsible at the federal level for the supervision of all federally registered or licensed financial institutions other than chartered banks. The supervision of chartered banks is the responsibility of the Inspector General of Banks. The Department also has responsibility for the supervision of employer-sponsored pension plans relative to employments under federal jurisdiction.

In addition, the Department is responsible for the provision of actuarial advice to other departments and performs extensive actuarial services in the valuation of government pension and insurance programs.

The deputy head of the Department is the Superintendent of Insurance and the responsible Minister is the Minister of Finance. Currently, administrative responsibility for the Department has been delegated by the Minister of Finance to the Minister of State (Finance).

2. Legal Mandate

The Department of Insurance Act of 1932 provided that the Department would be responsible for the administration of the legislation respecting federally registered or licensed insurance, trust and loan companies. Since that time, legislation has been enacted with respect to supervision of other types of financial institutions. Administration of such legislation, other than that related to chartered banks, has been assigned to the Department.

The Department also has specific responsibility under various Acts for the provision of actuarial services and advice.

Further information and a list of statutes administered is provided in Section III of the Plan (see page 29 for details).

3. Program Objective

The objective of the Program is to protect the public against financial loss from the operations of federally registered or licensed financial institutions and registered pension plans and to provide actuarial services for the government and other government departments.

4. Program Organization for Delivery

Activity Structure: The Department of Insurance has one program consisting of three activities, namely, Supervision of Companies, Actuarial and Other Services, and Administration.

The Supervision of Companies Activity comprises the supervision of financial institutions as well as the supervision of pension plans subject to the Pension Benefits Standards Act.

The Actuarial and Other Services Activity is responsible for the provision of actuarial services to the government and other government departments.

The Administration Activity which includes the Office of the Superintendent provides executive direction and central support services to the above two main activities. In addition to these functions, the Administration Activity carries out administration of the Civil Service Insurance Act and Part I of the Excise Tax Act.

Organization Structure: The Department is organized into three branches, namely Operations Branch, Actuarial Branch and Finance and Administration Branch. Headquarters of the Department is located in Ottawa and regional offices are maintained in Toronto, Montreal, Winnipeg, Vancouver and Halifax. Figure 3 shows the relationship between the organization and activity structures.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

Activity	Operations Branch	Actuarial Branch	Finance and Administration Branch	Activity Totals
Supervision of Companies	9,552	450		10,002
Actuarial and Other Services		1,546		1,546
Administration			1,958	1,958
	9,552	1,996	1,958	13,506

* Resources for the Office of the Superintendent are included in Finance and Administration Branch.

The supervision of financial institutions is carried out by the staff of the Operations Branch. In addition to a staff at headquarters, the Branch has a staff of examiners that performs the examination of the financial condition and affairs of companies under its supervision. The main force of examiners is stationed in Toronto where the head offices of companies are concentrated. Other smaller offices are situated in Montreal, Winnipeg, Vancouver and Halifax.

The supervision of pension plans subject to the Pension Benefits Standards Act is carried out by staff of the Actuarial Branch. The remaining staff of this branch is responsible for the provision of actuarial services and advice to the government and to other government departments.

5. Cost Recovery

Approximately 85% of the Department's regular ongoing costs are recovered, primarily from supervised financial institutions (see page 28 for further information).

D. Planning Perspective and Performance Review

1. Environment

Competition for the savings and insurance dollar and depressed economic conditions and real estate values, particularly in Western Canada, continue to affect the financial position of supervised companies. Financial institutions with significant investments in mortgages and real estate in the West continue to have to write down the value of these investments. The activities of these companies will continue to have to be monitored closely to protect the interest of the public. Although the operating results of most supervised companies have improved recently, capital and surplus margins remain narrow compared to historical standards.

During the past few years, there have been a number of events that have weakened the traditional barriers that had previously existed between the activities undertaken by the different sets of financial institutions. These events, the move towards integration and deregulation of financial institutions in the United States, and the fact that the federal legislation relating to non-bank financial institutions has not undergone complete revision for many years has led to intense pressure from trust companies, loan companies, insurance companies and co-operative credit associations for revision of the federal legislation applicable to them.

Faced with the dilemma of trying to decide what type of financial institution should be allowed to undertake what type of activity in a rapidly changing environment, the government appointed an Industry Advisory Committee in 1983 to provide it with advice on the direction in which financial institutions should be permitted to evolve in the future. Pressure continues for revision of the legislation and the Department of Insurance is participating with the Department of Finance and other interested parties in the preparation of policy papers on major outstanding issues. The Department will be heavily involved in preparing the legislation once the major policy issues are decided.

There is continuing activity on the pension reform front, from the perspective of both public and private pension plans. The Report of the Parliamentary Task Force on Pension Reform was tabled in December, 1983, and took the reform process one step further by examining and reporting upon the proposals for reform of the Canadian retirement income system contained in the Government of Canada's paper Better Pensions for Canadians. The February 15, 1984 budget document "Action Plan for Pension Reform" set out the government's plan for action to raise the minimum standards of private pension plans and strengthen public pensions. Draft legislation to amend the federal Pension Benefits Standards Act, incorporating the budget proposals for private pension plans, was tabled in Parliament in the spring of 1984 for discussion purposes. The Department is heavily involved in the pension reform process because it administers the Pension Benefits Standards Act and because it provides actuarial expertise on pension matters relating to government programs, both public and employer-sponsored.

2. Initiatives

The Department does not plan to make any major change in the nature or direction of its Program in 1985-86.

3. Update on Previously Reported Initiatives

- In the property and casualty area, the Department has created specialty positions in the claims and reinsurance fields during fiscal year 1984-85. Having a casualty actuary on staff has enabled the Department to better analyze the adequacy of claim reserves. In the reinsurance area, additional information is collected from companies and analyzed by the reinsurance specialist who advises on the adequacy of reinsurance arrangements.

- Commencing with fiscal year 1984-85, the Department identified financial resources of $100 thousand to be available for the obtaining of professional services on a contract basis. The requirement for such services, particularly professional real estate appraisal service, has arisen as a consequence of the increased emphasis on real estate investments by trust, loan and life insurance companies and the volatility of real estate values, particularly in Western Canada, in the last few years.

- The planning stage for the review of the scope and emphasis of the financial analysis, examination and other procedures and techniques used to monitor the financial institutions supervised by the Department began in January of 1984. The study stage commenced in June of 1984 and will continue through fiscal year 1985-86 (see page 18 for further information).

4. Program Effectiveness

Criteria for measuring the effectiveness of the Department are related to its main objective of protecting the public against financial loss from the operations of supervised financial institutions and providing actuarial services and advice to other departments.

The development of measures of effectiveness for the supervision of financial institutions will be deferred until the study of the scope and emphasis of systems and procedures used to supervise financial institutions is completed. This study will continue during the fiscal year 1985-86.

Notwithstanding the above, since the Department's objective is to protect the public against financial loss and since financial loss usually occurs when companies become insolvent, the number of companies that become insolvent in a given fiscal year gives some indication of effectiveness (see Figure 4 - 1984-85 data is as of October 1984).

Figure 4: Canadian Companies Supervised by the Department That Became Insolvent During the Last 10 Fiscal Years

Fiscal Year	Number of Canadian Companies Supervised[1]	Number of Canadian Companies that Became Insolvent During Fiscal Year
1984-85	270	0
1983-84	270	4[2]
1982-83	269	1
1981-82	271	1
1980-81	269	2
1979-80	258	0
1978-79	250	0
1977-78	252	0
1976-77	246	0
1975-76	239	1

1 Life insurance companies, property and casualty insurance companies, trust companies, loan companies, co-operative credit societies, investment companies.

2 Includes Greymac Mortgage Corporation, Seaway Mortgage Corporation and Fidelity Trust Company. Although these companies were not declared by a Court to be insolvent in 1983-84, they did encounter serious financial problems and only meet their contractual obligations with financial support from Canada Deposit Insurance Corporation.

Section II
Analysis by Activity

A. Supervision of Companies

Objective

To protect the public against financial loss from the operations of federally registered or licensed financial institutions and registered pension plans.

Sub-Objectives

- To ensure the financial solvency and the propriety of management policies and operations of federally registered or licensed insurance, investment, trust and loan companies, fraternal benefit societies and co-operative credit societies; and provincial insurance, loan and trust companies that are supervised under agreement or arrangements with their home provinces or the Canada Deposit Insurance Corporation.

- To provide the government with detailed information with respect to the operations and financial positions of the institutions enumerated above.

- To ensure the financial solvency of, and the propriety of management policies with respect to pension plans subject to the Pension Benefits Standards Act.

Resource Summary

The Supervision of Companies Activity accounts for approximately 74% of the total program expenditures and 73% of total person-years for 1985-86.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Supervision of Companies	10,002	165	10,052	155	10,093	151

Of the total Estimates of $10,002,000 for 1985-86, an amount of $8,252,000 represents costs of regular ongoing departmental activities and an amount of $1,750,000 is to provide for costs incurred in connection with the liquidation of two supervised insurance companies which have been placed under the control of the Superintendent of Insurance. The forecast expenses of $10,052,000 for 1984-85 include $7,477,000 for regular ongoing expenses and $2,575,000 with respect to liquidation work (see page 20 for further details).

Past Financial Performance

Figure 6: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Supervision of Companies	10,093	151	9,125	161	968	(10)

Explanation of Change: The difference between actual expenditures and Main Estimates is primarily the result of additional resources approved through Supplementary Estimates to meet higher than forecast expenses related to the winding-up of Pitts Insurance Company and Cardinal Insurance Company (see page 19 for further details).

Description

The Supervision of Companies Activity involves: the supervision of all federally registered or incorporated financial institutions, other than chartered banks; the supervision of certain provincial insurance, trust and loan companies that are supervised under arrangements with their home provinces; and the provision of examination and other technical services to the Canada Deposit Insurance Corporation. This Activity also includes the supervision of pension plans registered under the Pension Benefits Standards Act. At September 30, 1984 this involved the supervision of 574 financial institutions and 688 pension plans.

The headquarters staff carries out work related to incorporation and other corporate changes, registration, financial analysis, verification of actuarial reserves, control of assets required to be deposited by non-resident companies, and policy-making. The field staff of examiners of companies regularly visit company offices for the purpose of on-site examinations of companies' financial conditions, affairs and management practices.

Pension plans supervised under the Pension Benefits Standards Act are plans related to employments that fall within federal jurisdiction, i.e. the types of employment that are subject to the federal labour code. The Pension Benefits Standards Act parallels similar legislation existing in seven provinces. The Department maintains a close liaison with the provincial administrators in this area in order to promote uniformity in requirements and practices and to avoid duplication.

Pursuant to statute, the Department publishes annual Reports containing information on the financial condition and affairs of supervised financial institutions and also makes available to the public, through a computer data bank, information from annual financial statements filed by these companies. The work related to the publications and the data bank is handled by headquarters staff of the Operations Branch.

Performance Information/Resource Justification

The Department has not yet been able to develop reliable indicators of performance for the Supervision of Companies Activity. Although the number of companies supervised provides some indication of workload, the Department has found that it is not a good indicator. One category of financial institution may require more supervision than another category and, even within a category, the amount of supervision may vary significantly from company to company. The number of companies supervised may remain the same, while workload may increase because of a decline in capital and surplus margins.

Similarly, the size of the company supervised has proven not to be a reliable indicator. The Department supervises companies that range in size from less than $500 thousand to over $8 billion in assets. Frequently, the smaller companies require more supervisory time than do the larger companies.

The principal objective of this Activity is to try to ensure that supervised companies remain solvent. One indication of the financial strength of supervised companies, i.e. their ability to withstand adverse conditions, is the ratio of their capital and surplus to liabilities. As this ratio declines, the risk of serious financial problems and loss to the public increases, as does the amount of supervisory time necessary to try to ensure that companies remain in a position to meet their financial obligations.

As can be seen from Figure 7, with the exception of the life industry, there has been an improvement during the last two years in capital and surplus margins as a percentage of liabilities. Early 1984 operating results in the property and casualty industry indicate that the improvement in this industry may not continue in 1984. In addition, it is not expected that capital and surplus margins will be restored to levels known in the past. As a consequence, the potential for financial institutions to encounter financial problems continues to exist.

Figure 7: Trend in the Capital and Surplus Ratios of Major Groups of Supervised Canadian Companies*

December 31	Life Insurance Companies	Property and Casualty Insurance Companies	Trust and Loan Companies
	%	%	%
1983	6.28	34.0	4.88
1982	6.41	31.1	4.61
1981	7.38	27.4	4.62
1980	7.97	28.2	4.89
1979	8.13	30.3	5.13

* Ratios are calculated by dividing capital and free surplus by liabilities and appropriated surplus. Because of the different nature and amount of the guarantees provided by the different groups of companies and the different financial reporting requirements applicable to them, the ratios are not comparable between groups.

In any case, with the improvement in operating results in recent years, the Department is not requesting any increase in person-year resources for the fiscal year 1985-86 with a view to ensuring that the Department's current resources are used as effectively as possible.

Planning for the review of the scope and emphasis of systems and procedures used to monitor financial institutions commenced in January, 1984. The review commenced in June, 1984 and will continue into fiscal year 1985-86. It focuses on an examination of the methods and procedures used in the supervision process, including information collection, analysis thereof and field examination activities, with a view to maximizing the Department's effectiveness.

All of the expenses incurred by the Department in supervising financial institutions are recovered by annual assessments against those institutions (see page 19). The assessable expenses are prorated amongst all supervised financial institutions other than investment companies on the basis of income. For investment companies, the basis is assets. The rates of assessment shown in Figure 8 may be considered as an indicator of the growth in the Department's regular ongoing expenses relative to the growth of the financial institutions supervised.

Figure 8: Rates of Assessment for Regular Ongoing Expenses

	1983-84	1982-83	1981-82	1980-81
	$	$	$	$
Insurance Companies [1]	0.41	0.36	0.35	0.38
Trust Companies [2]	0.35	0.26	0.26	0.31
Loan Companies [2]	0.17	0.24	0.17	0.24
Co-operative Credit Societies [2]	0.33	0.25	0.22	0.26
Investment Companies [3]	34.27	34.18	31.19	25.99

1 Rate per $1,000 of net premiums.
2 Rate per $1,000 of total income.
3 Rate per $1,000,000 of mean assets.

As can be seen from Figure 8, the rates of assessment increased for 1983-84 for all companies except loan companies. The rate for loan companies was unusually high in 1982-83 as a result of expenses related to the Greymac Mortgage Corporation and Seaway Mortgage Corporation problems. For the other companies, the increased rates reflect the increased resources being used by the Department in carrying out its supervisory activities and a decline in the rate of growth of the assessment base.

It is relevant to note that the recoverable expenses referred to in the foregoing are those incurred by the Department in its regular ongoing supervision of companies. As referred to in departmental expenditure plans for 1983-84 and 1984-85, the Superintendent of Insurance was directed by the Court to take control of three supervised insurance companies for purposes of rehabilitating or liquidating their operations. The rehabilitation of Strathcona General Insurance Company ceased during 1983-84 with the company's amalgamation with Northumberland General Insurance Company. This action terminated the Department's responsibility in this regard. In the case of Pitts Insurance Company and Cardinal Insurance Company, the Department continues to be directly involved in overseeing the administrative arrangements related to their liquidation, a procedure that is expected to continue for a number of years because of the complexity of liquidating an insurance company.

Under the provisions of the Canadian and British Insurance Companies Act, the administrative expenses incurred by the Superintendent in connection with the liquidation of these companies are paid from the departmental appropriation and subsequently assessed against the industry. The intent of the legislation is to preserve the remaining assets of the insolvent company for the benefit of policyholders. During the fiscal years 1981-82 and 1982-83, administrative expenses in connection with the foregoing amounted to about $7.4 million and this amount has been assessed against the industry.

In 1983-84, expenditures relating to the rehabilitation of Strathcona General Insurance Company and the liquidation of Pitts Insurance Company and Cardinal Insurance Company amounted to $2.9 million. These amounts have also been assessed against the industry. Assessable expenses of about $2.6 million and $1.8 million are forecast for 1984-85 and 1985-86 respectively in connection with the liquidation of Pitts Insurance Company and Cardinal Insurance Company.

B. Actuarial and Other Services

Objective

To provide actuarial services and advice to the federal government and to government departments with respect to programs under development or administration.

Resource Summary

The Actuarial and Other Services Activity accounts for approximately 11% of the total program expenditures and 12% of total person-years for 1985-86.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Actuarial Services	1,546	26	1,416	25	1,354	25

	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Actuarial Services	1,354	25	1,366	26	(12)	(1)

Description

In the provision of actuarial services, the Department undertakes the following:

- actuarial valuation of, and statutory reports on, government pension and insurance programs other than unemployment insurance and government annuities; actuarial advice and calculations relating to ongoing administration of such plans;

- actuarial work relating to statutory reports and various duties and frequent special studies concerning the Canada Pension Plan;

- advice and calculations concerning actuarial aspects of programs adopted or proposed by other departments; and

- advice to the Department of National Revenue concerning funding of actuarial deficiencies and certain current service payments under pension plans registered for income tax purposes.

Performance Information/Resource Justification

The volume and complexity of the work of this Activity depend to a great extent on factors outside the control of the Department. Most of the staff is required to respond to requests for information, calculations and special studies that originate in other departments. Despite these uncertainties, attempts are made to schedule major projects well in advance. Figure 11 indicates the major projects scheduled for 1985-86. All major projects reported in the Department's 1984-85 expenditure plan are on schedule except the Statutory Actuarial Report on the Regular Force Death Benefit Account as at December 31, 1980 which is now expected to be completed early in fiscal year 1985-86 rather than late in fiscal year 1984-85 as originally reported. On the other hand, the Statutory Actuarial Report on the Canadian Forces Superannuation Account as at December 31, 1983 was initiated in fiscal year 1984-85, one year earlier than expected.

C. Administration

Objective

To provide executive direction and financial, personnel and administrative services for the Program, and to administer the Civil Service Insurance Act and Part I of the Excise Tax Act.

Resource Summary

The Administration Activity accounts for approximately 15% of the total program expenditures and 15% of total person-years for 1985-86.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration	1,958	35	1,847	34	1,674	32

Past Financial Performance

Figure 13: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Administration	1,674	32	1,663	33	11	(1)

Description

Office of the Superintendent: development of policy, strategic planning, proposals for revisions to legislation, research, program evaluation, and administration of the liquidation of insurance companies.

Financial Services: administration, design and maintenance of financial systems within the Department; provision of financial services and advice.

Personnel Services: administration, design and maintenance of personnel systems; provision of personnel services and advice.

Administrative Services: administration, design and maintenance of administrative support; provision of records management, materiel management, library, telecommunications, office accommodation and security services.

In addition to the above services which provide executive direction and support to the Department's other activities, this Activity is also responsible for the administration of the following legislation:

Civil Service Insurance Act: Under the Civil Service Insurance Program, the Government of Canada offered life insurance to its own permanent employees on an optional basis. No new policies have been issued since the introduction of the Supplementary Death Benefit Plan for the Public Service and Armed Forces in 1954. The present work consists of maintaining premium records and administering the provisions of the Civil Service Insurance Act with respect to death claims and requests for cash surrender values. Approximately 4,900 policies comprising $21 million of insurance currently remain in force.

Excise Tax Act (Part I): Under Part I of the Excise Tax Act, a 10% premium tax is imposed on certain insurance premiums paid by residents of Canada to unauthorized insurers, or to authorized insurers through brokers or agents outside Canada.

Performance Information/Resource Justification

Figure 14: Ratio of Administration Activity Costs and Person-Years to Total Department Costs and Person-Years

	1985-86		1984-85		1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration Activity	1,958	35	1,847	34	1,674	32
Total Department	13,506	226	13,315	214	13,121	208
Ratio	14.5	15.5	13.9	15.9	12.8	15.4

Note: The apparent increase in the cost of the administration activity in relation to total departmental costs results from distortion caused by the fact that total departmental costs in each year include significant extraordinary expenses of varying amounts related to the liquidation of two supervised insurance companies. If these expenses are excluded from total departmental costs, the ratio of administration activity costs to total departmental costs is 16.4% for 1983-84, 17.2% for 1984-85 and 16.7% for 1985-86.

Section III

Other	7	7	6		32,519
Technical					
Social Science Support	2	-	-	12,635 - 57,764	24,798
Administrative Support					
Clerical and Regulatory	33	37	39	12,932 - 31,743	22,502
Secretarial, Stenographic and Typing	24	23	23	12,636 - 31,946	20,755

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 17: Net Program Cost ($000)

	Operating Expenditures 1985-86	Add Other Costs[1]	Total Costs	Receipts Credited to Revenue[2]	Net Cost 1985-86	Net Cost 1984-85
Supervision of Companies	10,002	1,070	11,072	10,800	272	427
Actuarial and Other Services	1,546	133	1,679	449	1,230	1,142
Administration	1,958	162	2,120	1,601	519	586
	13,506	1,365	14,871	12,850	2,021	2,155

1 Other costs include: ($000)

- Accommodation provided without charge by DPW 927
- Other services provided without charge by other departments 438

2 Receipts Credited to Revenue include:

- Assessments against supervised financial institutions 11,750
- Charges to Canada Deposit Insurance Corporation and Canada Pension Plan for services provided 750
- Fees under Pension Benefits Standards Act 350

The above revenues do not include taxes collected pursuant to the provisions of Part I of the Excise Tax Act. Currently, tax revenues of about $1,000,000 per annum are realized in that regard.

C. Policy on Cost Recovery

Pursuant to statute, regular ongoing expenses incurred by the Department in connection with the supervision of financial institutions are recovered from these institutions by means of an annual assessment. Expenses incurred in connection with work done for the Canada Pension Plan and the Canada Deposit Insurance Corporation are recovered from those organizations. These recoveries include recovery of the related portion of the cost of the Administration Activity as well as the related portion of the cost of services provided free by other departments such as, for example, accommodation costs. In the case of pension plans supervised under the Pension Benefits Standards Act, fees paid by the plans cover about 70% of the costs incurred for this work. In all, approximately 85% of the Depart-

ment's regular expenses are recovered from the above sources. In addition, costs incurred in connection with the rehabilitation or liquidation of supervised companies are fully recovered from the industry.

D. Legal Mandate - Additional Information

The Department of Insurance Act of 1932 provided that the Department would be responsible for administration of the following Acts:

- Canadian and British Insurance Companies Act
- Foreign Insurance Companies Act
- Loan Companies Act
- Trust Companies Act
- Civil Service Insurance Act

Responsibility for administration of the following statutes has been assigned to the Department since that time:

- Co-operative Credit Associations Act
- Investment Companies Act
- Pension Benefits Standards Act
- Excise Tax Act - Part I

The Canada Deposit Insurance Corporation Act requires the Superintendent of Insurance to conduct examinations of each trust and loan company to which the Trust Companies Act and Loan Companies Act apply.

Order in Council (P.C. 1968-1029) authorized the Minister of Finance to enter into an agreement with any province, whereby the Superintendent of Insurance is to provide supervisory services in accordance with provincial legislation in respect of certain classes of companies incorporated in or transacting business in the province, provided that the Superintendent supervises comparable companies under federal legislation. Pursuant to such agreements, the Superintendent provides supervisory services with respect to provincial insurance companies and trust companies in Manitoba and provincial trust companies in Nova Scotia and Prince Edward Island.

The Chief Actuary of the Department of Insurance is required by the Canada Pension Plan Act to prepare a report based on an actuarial examination of the Plan at least every five years, as well as a report indicating the effect of any proposed amendments to the Plan.

Actuarial reports are required to be laid before Parliament at least once every five years under the following Acts: Public Service Superannuation Act, (separate reports with regard to the Superannuation Account and the Public Service Death Benefit Account), Canadian Forces Superannuation Act, (separate reports for the Canadian Forces Superannuation Account and the Regular Force Death Benefit Account), RCMP Superannuation Act and RCMP Pension Continua-

tion Act. Although the above Acts do not specifically require the Department of Insurance to prepare the actuarial reports, the custom has been to have the reports prepared by the Department.

The Superintendent of Insurance is required by paragraph 20(1)(s) of the Income Tax Act to advise the Minister of National Revenue as to the deductibility of certain employer contributions to registered pension plans.

1985–86 Estimates

Part III

Expenditure Plan

965

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Department of Justice Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into three sections. Section 1 presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $151,093,000 in support of the 1985-86 Administration of Justice Program. The remaining expenditures, estimated at $7,632,000 for contributions to employee benefit plans and the Minister's salary and motor car allowance will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

Highlights of the Administration of Justice Program during 1985-86 will be:

- counsel, either from within the Department of Justice or retained as Crown agents from the private sector by the Attorney General and supervised by the Department of Justice, will conduct all litigation in which the Crown is involved. Approximately 320 lawyers from the Department will be dedicated to this work. The total cost will be $28,699,000. Additional sums will be spent from the programs of other departments and agencies in payment of Crown agents. In 1983-84 the total cost for the payment of Crown agents was $12,981,889 (see page 19);

- a full range of legal services will be provided to the Crown and its departments and agencies. These services will be carried out by approximately 290 lawyers from the Department of Justice and on very limited occasions by Crown agents retained by the Attorney General and supervised by the Department of Justice. The cost of the services, within this Program, will be $23,957,000 (see page 17);

- all legislation required by the government will be drafted by the Department of Justice. 20 lawyers will be assigned to the preparation of draft bills, and 18 lawyers will be engaged in the preparation and review of delegated legislation. In addition, a new revision of the statutes of Canada, on which four lawyers will be working, will be completed and tabled in Parliament (see page 16). The total cost of these legislative activities will be $6,688,000 (see page 23);

- in carrying out its responsibilities for policy development and implementation, 56 lawyers and other professionals will be assigned to the tasks. Some major results of those tasks and the resources to be applied to them during 1985-86 are:

  - contributions will be made to three major programs whose costs are shared with the provinces: criminal legal aid of $64,633,000 (see page 26); native courtworkers, $3,930,800 (see page 26); and, compensation to victims of crimes, $2,626,000 (see page 26);

- criminal law reform will continue with emphasis on the development and introduction of proposals respecting sentencing principles and procedures, mental disorder, police powers, contempt of court, pre-trial procedure, defamatory libel, prostitution, hate literature, pornography and obscenity, and sexual offences against children at a total cost of $2,354,633 (see page 27);

- proposals for divorce law reform and to facilitate enforcement of maintenance and custody orders will be reviewed and implemented at an estimated cost of $314,631 (see page 28);

- the introduction of legislation to make federal laws consistent with the Canadian Charter of Rights and Freedoms. Resources dedicated to this purpose are $307,020 (see page 28);

- work will continue, at a proposed cost of $248,914, on the Federal Statutes Compliance Project designed to develop modern ways to facilitate compliance with the law and to ensure that laws are administered fairly, economically and effectively (see page 28);

- a public legal education and information program will be implemented which is designed to improve access to justice through increasing public awareness and understanding of the law. This will involve a requirement for $1,030,000 (see page 28);

- the work of the Commission of Inquiry on sentencing will continue with the intensive examination of sentencing practices and penalties. This inquiry, which is independent of the Administration of Justice Program, is expected to require $1,056,186 during 1985-86 (see page 29).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Legal Services	23,957	22,725	1,232	17
Litigation Services	28,699	27,011	1,688	19
Legislative Services	6,688	6,096	592	23
Legal Policy and Program Development	84,573	84,516	57	26
Administration	14,808	13,066	1,742	35
	158,725	153,414	5,311	
Authorized person-years	1,389	1,391	(2)	

Explanation of Change: The financial requirements for 1985-86 are 3.5% or $5.3 million higher than the 1984-85 forecast expenditures. This increase is a composite figure which incorporates numerous small changes in the Program.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of September 30, 1984) is $24.7 million or 19.2% higher than the 1984-85 Main Estimates of $128.7 million (Extracts from Part II of the Estimates page 4). The difference reflects two major items: a contribution of $10.5 million for the Young Offenders Program and an expenditure of $12. million for the Legal Aid Program, as approved in the Supplementary Estimates 1984-85.

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

C. Background

1. Introduction

The Department of Justice was created by an Act of Parliament in 1868. For approximately a century it remained relatively small in size, acting primarily in a supervisory capacity, overseeing and administering the work of lawyers in the private sector retained to act on behalf of the Crown, particularly in matters involving litigation. Generally speaking, most of the legal services required by governmental departments and agencies were provided by lawyers on the staffs of those departments and agencies, with matters of major governmental concern being referred to the Department for its opinion. In 1962, the report of the Royal Commission on Government Organization recommended that the legal services of the government be provided by the Department of Justice, with five exceptions: the Judge Advocate General; the Legal Division of the Department of External Affairs; the Legal Branch of Taxation in the Department of National Revenue; the Pensions Advocates in the Department of Veterans Affairs; and, the Legal Officers in the RCMP. That recommended integration was completed by 1970. In 1967, the Legal Branch of Taxation was incorporated into the Department. The Legal Branch of the RCMP was dissolved in 1979 and responsibility for providing all legal services was assigned to the Department. Also, in 1982, the Department assumed responsibility for certain of the legal work of the Department of External Affairs.

The Administration of Justice Program, which encompasses the work of the Department, performs two distinct functions on behalf of the government.

The Attorney General function of the Department is primarily concerned with the application of existing law. The duties performed in carrying out that function include the provision of legal advice to the heads of all departments and some agencies of the government in all matters of law (see page 17), the preparation of legislation (see page 23), and the conduct of litigation (see page 19). In providing such services to departments and agencies there is a special regard for the public interest.

The Minister of Justice function is primarily concerned with: the policy considerations underlying the substantive law for which the Minister has direct responsibility (Criminal Code, divorce, etc.) (see page 25); the substantive or procedural content of government bills, regulations and departmental directives which may affect fundamental human rights or liberties; the legal mechanisms which are employed by other Ministers to give effect to governmental objectives; ensuring

that the administration of public affairs is in accordance with the law; and, "such other duties as are at any time assigned by the Governor in Council".

2. Legal Mandate

The roles and responsibilities of the Department of Justice are based on the Department of Justice Act which provides for three broad areas of endeavour. First, the Department is empowered to provide a full range of legal services to the Government of Canada and its departments and agencies including the provision of legal advice, the preparation of legal documents, the drafting of legislation and the conduct of litigation. Second, the Department is charged with ensuring that the administration of public affairs is carried out in accordance with the law. Third, the Department has the lead responsibility in the planning, development and implementation of government policies in areas related to the administration of justice and such other areas as are assigned by the Governor in Council.

The major statutes, in addition to the Department of Justice Act, that provide direction to the work of the Department of Justice are the Canadian Bill of Rights, the Statutory Instruments Act and the Statute Revision Act. The Canadian Bill of Rights requires the examination of all bills introduced in the House of Commons and all regulations transmitted to the Clerk of the Privy Council for registration to ascertain whether any of the provisions thereof are inconsistent with the purposes and provisions of that Act. The Statutory Instruments Act requires the examination of regulations according to criteria set out in that Act. The Statute Revision Act provides for the periodic revision and consolidation of the public general statutes of Canada and of the regulations of Canada.

Acts for which the Minister of Justice has responsibility are listed in Section III: C.

3. Program Objective

To provide legal services to the Government of Canada and to government departments and agencies; to superintend the administration of justice in Canada in all matters not within provincial jurisdiction; and to propose policy initiatives and programs in connection therewith.

4. Program Organisation for Delivery

Activity Structure: The Administration of Justice Program is composed of five activities, which are depicted together with their associated sub-activities in Figure 3.

Figure 3: Activity Structure

These are described in more detail in Section II of this Plan.

Organisation Structure: The Administration of Justice Program is administered by a Deputy Minister who is accountable to the Minister of Justice for the management of the Program.

Two Associate Deputy Ministers and a total of seven Assistant Deputy Ministers and three Assistant Deputy Attorneys General report directly to the Deputy Minister. Figure 4 outlines the organizational structure, its relationship to the Program's activity structure and provides a breakdown of 1985-86 resources.

Figure 4: 1985-86 Distribution of Resources by Organization and Activity ($000)

	Litigation Services	Legal Services	Legislative Services	Legal Policy & Program Development	Administration	Total
Minister					1,184	1,184
Deputy Minister					2,429	2,429
Associate Deputy Minister, Civil Law	6,062	1,198				7,260
Associate Deputy Minister, Litigation						
Assistant Deputy Attorney General, Civil Litigation	22,481	3,354				25,835
Assistant Deputy Attorney General, Criminal Law						
Senior Assistant Deputy Minister, Legal Services						
Assistant Deputy Minister, Commercial and Property Law		17,249				17,249
Assistant Deputy Minister, Finance						
Assistant Deputy Minister, Legislative Programming			6,666			6,666
Assistant Deputy Minister, Public Law		2,156		1,477		3,633
Assistant Deputy Minister, Policy Planning and Development				83,096		83,096
Assistant Deputy Attorney General, Admiralty and Maritime Law	155					155
Assistant Deputy Minister, Administration					11,195	11,195
Total Appropriation	28,699	23,957	6,666	84,573	14,808	158,725

The services of the Administration of Justice Program are provided through three organizational components: a Headquarters in Ottawa; 39 Departmental Legal Services Units (DLSUs) attached to client departments and agencies; and 9 Regional Offices.

Headquarters provides to the DLSUs and Regional Offices a pool of expertise in litigation and in the following areas of law: constitutional, international, administrative, human rights, real property, commercial, information and privacy, and criminal.

Headquarters also advises Ministers of the implications for indicidual rights and freedoms of their proposals; provides functional direction to DLSUs and Regional Offices; develops legal policy; administers and develops programmes; is responsible for legislative services; and provides central services such as financial and personnel services.

Prosecutions and other litigation heard in National Capital Region courts are handled by Headquarters. In addition, tax litigation arising in Manitoba, designated areas of Ontario, Quebec, and in the Atlantic provinces is dealt with by Headquarters, as are civil litigation and departmental legal services provided in those areas of Quebec not served by the Montreal Regional Office.

DLSUs provide advice and assistance to client departments and agencies on all matters of law. Such matters include legal opinions and advice, reports, briefs and memoranda; submissions; drafting instructions; negotiations; representations and interventions; draft agreements and undertakings; and, legal instruments. The Senior Assistant Deputy Minister, Legal Services is responsible for the DLSUs.

Eight of the Regional Offices (Vancouver, Edmonton, Saskatoon, Winnipeg, Toronto, Halifax, Yellowknife and Whitehorse) report to one Associate Deputy Minister, while the Montreal Regional Office reports to another, the Associate Deputy Minister, Civil Law. This division of reporting relationship reflects the difference between the Civil Law of Quebec and the Common Law of the other provinces. The major part of the Regional Office workload relates to litigation matters, although in most cases they also provide a full range of legal services to client departments and agencies at the local level.

Of a total of 1389 person-years, approximately 240 are in DLSUs, 485 are allocated to Regional Offices and 664 are in Headquarters. Approximately 700 of the total staff complement are legal officers, 30 are articling students, 60 are para-legals, and 8 are professionals with specialities in fields such as sociology, psychology, and criminology who are working on legal policy matters. The remaining 591 staff provide management, technical, and administrative support services.

D. Planning Perspective

1. Environment

Several environmental factors have been identified which will have a major impact on the direction to be taken by the Program during 1985-86.

The Constitution: The Constitution, and especially the Canadian Charter of Rights and Freedoms, will continue to exert a significant influence on the Program in several ways. The Department will maintain a major role in the ongoing constitutional discussions, including the two currently planned First Ministers' Conferences, and in the review of a number of specific constitutional questions.

The provisions of the Charter will unquestionably continue to the subject of litigation at all levels of the court system. In addition, the ongoing implementation of the Charter will result in increased demands by departments and agencies for advice as to the applicability of the Charter provisions to their existing and proposed programs and policies, and in a need for departmental leadership in promoting legal and administrative reforms to ensure compliance with the Charter. Also, legislation will be required to ensure that federal laws are consistent with the Charter.

Access to Justice: There is continuing widespread concern about questions relating to the accessibility of the justice system. There are ongoing demands for assistance for certain groups who, for financial, cultural or other reasons are not able to enjoy the full benefits and protections of the system. Also, there is continuing pressure for improvements in the measures designed to inform and educate the public about the laws which govern their lives.

The Court System: As access to justice is being improved an increasingly heavy burden is being placed on our court system. Numerous initiatives have been introduced by the federal courts to cope with their additional workload. It appears, however, that no matter how much more efficiently those courts conduct their affairs, some structural and jurisdictional changes may be required to solve the problems, particularly at the appellate level.

In addition to proposals respecting the internal restructuring of the court system, alternatives to the formal court structure, such as arbitration and mediation, as methods of dispute resolution are being examined. These are being looked at in the context not only of elimination of backlogs of cases which have built up but also as to what role the courts ought to play in determining issues between the state and its citizens and between citizens themselves.

Relations between Citizens and the Federal Government: Public response to the degree of government intervention required in a modern, complex state has resulted in pressure to re-examine some of the fundamental aspects of that intervention. In addition to the major review of the criminal law, which is underway, designed to bring that law into line with the current needs of society, the Program will have to continue its examination of regulatory laws including the extent of the use of the criminal law as a means of controlling behaviour. Also, the regulatory machinery of the state will have to undergo some basic review.

Native Legal Questions: The great increase in activity surrounding native issues which has been generated by the constitutional discussions, by the negotiations of aboriginal land claims and particularly by demands for aboriginal self-government will mean increased involvement of the Program in native justice-related questions.

Divorce, Maintenance and Custody: The family continues to be the natural and fundamental group unit of society. A modern, coherent policy for the family must emerge to respond to changes in its structure which have occurred as a result of altered social patterns. Spouses increasingly face marriage breakdown and divorce. In some cases, the disintegration of the family has been characterized by an increasing incidence of physical and emotional abuse of children and violence among family members. As a result, the need for a more humane process for the resolution of family disputes and for more effective methods of enforcing maintenance and custody orders arising from these disputes will increase.

International Relations: With the rapid development of the interdependence of both our culture and our economy with those of other countries, there will be increasing legal activity with respect to such matters as the extra-territorial application of domestic laws, treaties on international cooperation in many fields, and the resolution of our boundary disputes with our neighbours.

Efficiency, Effectiveness and Economy: The recent change in government will likely result in the introduction of some new initiatives, and the acceleration of existing initiatives designed to realize greater efficiency, effectiv-ness and economy in the implementation of federal programs. The importance of this task in relation to the Program will be heightened by increasing public pressure to eliminate unnecessary expenditures in the criminal justice system in order to combat rising costs. The challenge for the Program, therefore, lies in the need to achieve higher levels of efficiency, effectiveness and economy while ensuring an appropriate level of quality and quantity in the delivery of its services.

2. Initiatives

Initiatives planned for 1985-86, which have significant resource implications:

- With a view to achieving easier access to the law by the public and also to make that law more comprehensible, a new revision of the statutes of Canada will be completed and introduced into Parliament. The cost of this initiative during 1985-86 is estimated at $1,509,000.

- Completion of the review of federal laws and the introduction into Parliament of legislation for amending those laws in relation to guarantees contained in the Canadian Charter of Rights and Freedoms, including the equality rights which become effective in April, 1985. The resources to be applied to this initiative during 1985-86 total $307,020.

- In keeping with the demands that the government be involved in the lives of its citizens only to the extent necessary to ensure the carrying out of government policies, work will continue on the Administrative Law Reform Project initiative begun in 1983. This work includes an examination of the Statutory Instruments Act, re-evaluation of the status of the Crown with regard to liabilities, immunities, privileges and prerogatives, completion of a pilot project on the rationalization of social benefits appeal tribunals, examination of the desirability of setting minimum rules of procedure for administrative agencies, and further research on a proposal that there be established an advisory council on administration. Amendments, incorporating some of the results of the project, will be proposed to the Statutory Instruments Act, the Crown Liability Act and the Federal Court Act. During 1985-86 this initiative will require the expenditure of $248,808.

3. Program Effectiveness

To measure the effectiveness of the Program it is necessary to examine each of the Activities separately. This is so because, even though there is some overlap of effectiveness measures between different activities, there are fundamental distinctions which must be drawn among them based on the nature of the services provided and the clientele being served. Consequently, the effectiveness of each Activity will be reported on in the Analysis by Activity section relating to that Activity.

Section II
Analysis by Activity

A. Legal Services

Objective

To provide the Government of Canada and its departments and agencies with appropriate and timely legal services in accordance with their expressed needs, exclusive of the services provided by the Litigation Services Activity and the Legislative Services Activity.

Resource Summary

This Activity accounts for approximately 15% of the 1985-86 Administration of Justice Program expenditures and 30% of the total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Legal Services	23,957	416	22,725	421	19,176	410

The expenditures for this activity will be applied as follows: 90% for salaries and wages and contributions to employee benefit plans; and 10% for other operating expenditures.

Description

A full range of legal services is provided (exclusive of litigation counsel and legislative drafting) to the government, its departments, and many of its agencies. These services are provided through lawyers employed in the Department of Justice or through contracts with lawyers in the private sector. In addition to the legal specialisation which arises out of the unique aspects of government legal work, units of expertise in functional areas of the law such as property law, international law, constitutional law, etc., have been developed. Services extend to both the civil law and the common law and with respect to all federal, provincial and territorial laws.

Performance Information/Resource Justification

The primary outputs of this activity are legal advice and opinions, and draft legal documents. The lawyers and notaries providing these services are located at Headquarters, in the DLSUs, and in Regional Offices. At Headquarters, there is a central pool providing expertise in the following fields of law: constitutional, international, administrative, human rights, admiralty and maritime, property, commercial, information and privacy, and criminal. There are also lawyers and notaries assigned to the offices of 39 departments and agencies. In addition, each of the Department of Justice's Regional Offices provides a similar service, either fully or in some cases only partially, to the regional offices of client departments and agencies. The type and volume of the services provided vary greatly depending on the requirements of the client, which makes it difficult to predict the extent of resource support necessary to provide a satisfactory level of service. Historical workload data can provide some indication of trends from which rough projections of future requirements can be made. These projections must be adjusted, however, for known and anticipated variations in future demand based on other factors such as changes in government policy.

On April 1, 1984, all legal officers began recording all time spent on both operational and non-operational work. That data has been input to a departmental automated system. When the reports have been produced, the results will be analyzed to determine how best they might be related to other performance indicators, which are being developed, to generate useful performance information.

Based on past experience, 416 person-years and $23,957,000 are requested to provide the existing level of services to the government and its departments and agencies.

The principal method of determining the effectiveness of this Activity is through cyclical program evaluations. The first such major evaluation of this Activity is nearing completion. As part of that evaluation, interviews were conducted with the directors of legal offices, as well as a sample of lawyers and clients in the National Capital Region and across the country. The final results are now being analyzed but preliminary results based on early interviews which were conducted largely within the National Capital Region show that the Activity is meeting its objective. Clients expressed overall satisfaction with the performance of the program. Most of their legal needs are being met, with but few exceptions. A more detailed report of the results of the study will be provided in next year's Expenditure Plan, when analysis of the evaluation will have been completed.

B. Litigation Services

Objective

To regulate or conduct all litigation for or against the Crown or any federal department, in respect of any subject within the authority or jurisdiction of Canada.

Resource Summary

This activity accounts for approximately 18% of the 1985-86 Administration of Justice Program expenditures and 38% of the total person-years.

In Figure 6 there has, in certain limited instances, been an arbitrary assignment of expenditures among the sub-activities because it is neither feasible nor desirable in those cases to keep bookkeeping records which differentiate among those sub-activities.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Civil Litigation	12,628	175	11,948	175		
Tax Litigation	4,305	95	4,089	95	breakdown	
Criminal Law	8,610	228	8,139	228	not	
Other	3,156	32	2,835	32	available	
	28,699	530	27,011	530	26,468	465

The expenditures for this activity will be applied as follows: 77.6% for salaries and wages and contributions to employee benefit plans; and 20% for operating expenditures and 2.4% for capital expenditures.

Description

Litigation Services provides counsel to the Government of Canada in litigious matters. Services are provided in both the common law and the civil law systems and at all levels of the provincial and federal court systems and before administrative bodies. The services are provided either by lawyers employed in the Department of Justice or through the retention of Crown agents in the private sector. When Crown agents are retained they are instructed by the Department of Justice but paid by the departments and agencies for whom the services are performed. The work of Litigation Services is divided functionally into three areas: civil litigation, tax litigation and criminal law, each constituting a sub-activity.

Civil Litigation : The function of this sub-activity is to represent the federal Crown in civil conflicts which have given rise, or may give rise, to legal proceedings in the courts or before commissions, boards or other tribunals.

Tax Litigation : This sub-activity is involved in the enforcement, through legal action, of the federal fiscal statutes.

Criminal Law : This sub-activity is engaged in the enforcement, by prosecution or other legal action, of certain federal laws.

Performance Information/Resource Justification

The principal outputs of this activity are: in the field of criminal law, criminal charges dealt with and extradition proceedings completed; and in the fields of civil litigation and tax litigation, actions settled or brought to judgment, judgments enforced, and court opinions and judgments obtained in references and interventions. Although the nature and level of activity with respect to each of these outputs are largely beyond the control of the Program as they are generated by factors independent of the Department of Justice, data can be collected and in the future will be reviewed to see whether any useful trends are disclosed which will assist in projecting resource requirements. In that regard, as a start, data is being collected as to the numbers of cases being handled before the different levels of courts and the approximate length of time to handle each case in the different categories. Figure 7 sets out the total of appeals heard by the Supreme Court of Canada and the number of appeals in which counsel representing the federal Crown appeared. Figure 8 provides similar information respecting matters before the Federal Court of Appeal. Figures 9 and 10 show respectively the tax evasion cases referred to the Department of Justice and the number of convictions related to drug cases in Canada.

On April 1, 1984, all legal officers began recording all time spent on both operational and non-operational work. Data collected since April 1,1984 has been input to a departmental automated system. Systems are currently being developed to obtain comparable data from Crown Agents. When the reports have been produced, the results together with other performance indicators, will be used to assess the performance of departmental lawyers and Crown Agents.

The effectiveness of this Activity will be determined, in part, through formal program evaluations. Such an evaluation is presently in progress and the results of it will be reported next year when the report will have been completed. There are also some performance indicators which, over the course of time will provide a partial

measure of effectiveness. They relate to the dollar value of civil claims for and against the Crown which are handled by this Activity. The first year's data is set out in Figure 11.

Narcotic, controlled and Restricted Drug Statistics, 1983, Bureau of Dangerous Drugs, Health Protection Branch, Department of National Health and Welfare.

C. Legislative Services

Objective

To provide, in an appropriate and timely fashion, for the legislation needs of government by drafting and examining bills and regulations, and revising and consolidating the public statutes and regulations of Canada.

Resource Summary

This activity accounts for approximately 4% of the 1985-86 Administration of Justice Program expenditures and 6% of the total person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Legislation	2,475	45	2,286	45	breakdown not available	
Review of Statutory Instruments	2,207	29	2,005	23		
Statute Revision	2,006	11	1,805	13		
	6,688	85	6,096	81	4,827	75

The expenditures for this activity will be applied as follows: 54.7% for salaries and wages and contributions to employee benefit plans; 43.6% for operating expenditures and 1.7% for capital expenditures.

Description

The functions performed by Legislative Services are divided into three sub-activities which are as follows:

Legislation : This sub-activity is concerned with the drafting of federal statutes and statutory instruments under authority from and pursuant to the directions of Cabinet and individual Ministers. It also involves the preparation of legislation for publication. In addition, all bills presented to the House of Commons are examined to ensure consistency with the rights which are protected under the Canadian Bill of Rights, the International Covenant on Civil and Human Rights and the Canadian Charter of Rights and Freedoms.

Review of Statutory Instruments : The work carried out in this subactivity consists in examining, on behalf of the Deputy Minister of Justice and the Clerk of the Privy Council who have statutory responsibility in that regard, all proposed regulations, as provided by the Statutory Instruments Act. As with draft bills, all draft regulations are also examined to ensure consistency with the rights protected under the Canadian Bill of Rights, the Canadian Charter of Rights and Freedoms and the International Covenant on Civil and Human Rights. The work of the sub-activity also includes a review of all other documents submitted to the Governor in Council.

Statute Revision : On a periodic basis the public general statutes and regulations are revised and consolidated in accordance with the requirements of the Statute Revision Act. Such a consolidation and revision of the statutes is currently underway (see page 16).

Performance Information/Resource Justification

The outputs of this activity are: draft bills and statutory instruments, and published Parts II and III of the Canada Gazette and the annual Statutes of Canada; certified bills and regulations; and, published consolidations of statutes and regulations. Because the activity is wholly service-oriented the type and volume of the workload depends entirely on the demands imposed by the government and its departments and agencies and, with respect to the examination of draft statutes pursuant to the Canadian Bill of Rights, on the volume of the statutes tabled in Parliament. The demands of the government and the numbers of statutes tabled are in turn determined by the changing environment to which the government and Parliament must respond. Some workload indicators have been developed which provide data on past performance with respect to some of the outputs of this activity. They may, over time, disclose trends. Figure 13 sets out the number of Government Acts (other than Appropriation Acts) passed in each calendar year. Figure 14 portrays the number of sets of regulations examined annually, the approximate number of Orders in Council examined annually, and the number of proclamations and commissions drafted annually.

Figure 13: Government Acts (other than Appropriation Acts) Passed per Calendar Year

1980	1981	1982	1983
28	54	43	37

Figure 14: Sets of Regulations Examined Annually, Orders in Council Examined Annually (approximate) and Proclamations and Commissions Drafted Annually

Year	Sets of Regulations Examined	Orders In Council Examined (approximate)	Proclamations and Commissions Drafted
1981	1296	2500	202
1982	1264	2750	231
1983	1401	2850	330

D. Legal Policy and Program Development

Objective

To ensure that the Administration of Justice Program objectives, programs, policies, and plans are responsive to changing Canadian needs insofar as those needs pertain to federal law, the system of justice and the legal operations, practices and policies of the Government of Canada. Further, in consonance with approved policy objectives, to bring about beneficial change in the law and system of justice in Canada.

Resource Summary

This activity accounts for approximately 53% of the 1985-86 Administration of Justice Program expenditures and 8% of the total person-years.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Policy Development	5,074	84	4,907	84	breakdown not available	
Implementation of Policy Objectives	79,499	25	79,609	22		
	84,573	109	84,516	106	46,141	80

The expenditures for this activity will be applied as follows: 6% for salaries and wages and contributions to employee benefit plans; 4% for operating expenditures and 90% for transfer payments.

Description

The Legal Policy and Program Development activity consists of the following sub-activities:

Policy Development: The primary function of this sub-activity is the formulation and preparation of long and medium term plans and policies designed to attain governmental goals and departmental objectives. Policy Development includes interaction with such external sources as federal central agencies, other federal government departments, other levels of government, non-governmental organizations, and the public at large.

Implementation of Policy Objectives Through Program and other Initiatives: The primary thrust of this sub-activity is to bring about beneficial change in the law and the system of justice. In support of this thrust, a relatively large grants and contributions program is in place. Two broad concerns underline this sub-activity; that there should be equality before and under the law, and that both the legislative and non-legislative features of the system of justice should be appropriate to meet contemporary Canadian needs.

Performance Information/Resource Justification

Policy Development: During 1985-86 this sub-activity will be concerned with a number of continuing and new policy initiatives, principally in the areas of criminal law, administrative law and family law, but also including other policy matters which fall within the purview of the responsibilities of the Minister of Justice. The initiatives which will require the application of relatively substantial resources are the following:

- a continuation of the in-depth, fundamental and coordinated revision of the criminal law with a view to the provision of a new Criminal Code by 1987. During 1985-86 four projects within the revision are scheduled for completion: police powers, mental disorder, sentencing principles and procedures, defamatory libel, and pre-trial procedure. Other projects on which work will be taking place during 1985-86 are: homicide, protection of life, assault, vandalism, arson, infractions against public safety, offences against social institutions, and jurisdiction of the courts. Resources required for this purpose during 1985-86 are $1,482,310 including 23 person years;

- in addition to the Criminal Code revision, there will be an ongoing identification of emerging issues in criminal law and procedure and the development of policies to deal with those issues. Within the purview of this work during 1985-86 will be the review and implementation of proposals for legislation dealing with: drinking and driving, computer crime, pornography, prostitution, writs of assistance, telewarrants, hate propaganda, sexual offences against children and adults, technical and procedural changes for the general improvement of the administration of justice, mutual assistance in criminal law enforcement between Canada and the United States, extradition and fugitive offenders, the protection of trade secrets and confidential commercial information, and the rationalization and consolidation of federal traffic laws. Required to carry out this work are resources totalling $872,323 including 17 person-years;

- the ongoing review of federal legislation and regulations and the development of proposals for amending the body of federal laws to bring them into compliance with the guarantees contained in the Canadian Charter of Rights and Freedoms, including those respecting equality which come into effect in April 1985. This review requires $307,020 including 5 person-years;

- an Administrative Law Reform Project. This is a special project which includes an examination of the Statutory Instruments Act, re-evaluation of the status of the Crown with regard to liabilities, immunities, privileges and prerogatives, completion of a pilot project on the rationalization of social benefits appeal tribunals, examination of the desirability of setting minimum rules of procedure for administrative agencies, and further research on a proposal that there be established an advisory council on administration. Total resources needed are $248,808 including 2 person-years;

- continuation of the Federal Statutes Compliance Project, the purpose of which is twofold: first, to identify non-criminal offences and provide adequate procedural safeguards for dealing with them, and second, to design and facilitate the adoption of fairer, more effective and more economical compliance systems. The carrying out of this project during 1985-86 will require $248,914 including 3.5 person-years;

- the development, for introduction into Parliament, of legislation to ensure the appropriate application of Canadian law in offshore areas under Parliament's jurisdiction will entail extensive consultations and negotiations with the provinces affected by the legislation. This work will require $114,808 including 2 person-years during 1985-86;

- with respect to family law policy, proposals for reform of the divorce legislation will be developed and introduced into Parliament. Accompanying such reform will be: a review and implementation of proposals to facilitate the enforcement of maintenance and custody orders emanating from provincial courts; and proposals concerning mediation services, and status of women issues. The resources proposed to be applied to these purposes total $314,631 including 6 person-years;

- during 1985-86 the Public Legal Education and Information Program, including a contribution Fund on the Access to Legal Information, will continue. Accompanying this, research and development on public participation in law reform and

practical means to make the laws more understandable will be undertaken. This will require $1,030,000 including 7 person-years;

- within the Program, in addition to the development of legislative proposals respecting sentencing and the work of the Commission of Inquiry dealing with sentencing practices and penalties, resources of $2,000,000 including 8 person-years will be required to implement sentencing reform initiatives. The resources will be used for transitional assistance to the provinces in the form of project support aimed at the encouragement and facilitation of the establishment of provincially delivered programs, for training, education and orientation activities aimed at both the professional criminal justice community and, more generally, at the public at large, and for research and evaluation activities;

- in carrying out the government's initiative for Justice to Victims of Crime, $850,000 including 5 person-years will be required for legal education and information, research on such matters as victims' needs, alternative funding strategies (fine surtaxes), impact victim statements, and on policy changes made in police charging and in policy prosecution for battered wives. Through contribution funding, assistance will be given to provinces in the development of comprehensive victim assistance programs and to criminal law reform activities on sexual offences against children and youths; and

- policy initiatives will be developed relative to judicial salaries and benefits. This will call for a review of judicial remuneration and benefits as a result of the 1983 Report on Judges' Salaries and Benefits and other reports and representations as well as proposals for amendment of the Judges Act and related statutes. For this purpose $72,404 including 1 person-year will be needed.

Implementation of Policy Objectives Through Program and other Initiatives: This sub-activity is involved essentially with the management of transfer payments. The list of the transfer payments within the Administration of Justice Program is contained in Section III.

In respect of the transfer payments there are two underlying concerns, i.e., that there should be equality before and under the law, and that both the legislative and non-legislative features of the system of justice should be appropriate to meet contemporary Canadian

needs. To meet these concerns the funds are used to support a number of identified issues:

- access by the poor to legal advice and representation;
- overcoming the cultural barriers confronting native people in gaining access to the legal system and treatment under it;
- the need for increased public awareness of legal rights and of the operation of the system of justice;
- law review and reform;
- improvements to the system of justice; and
- research and legal scholarship.

The following contribution funds have been allocated to this Program:

• Criminal Law Reform Fund	$417,500
• Special Projects - Legal Aid	$250,000
• Consultation & Development Fund	$235,000
• Human Rights Law Fund	$400,000

Three major contribution programs cost-shared with the provinces are also administered by this Program:

• Criminal Legal Aid for Adults and Young Offenders	$64,633,000
• Native Courtworkers	$ 3,930,800
• Compensation to victims of crimes	$ 2,626,000

To administer these funds and contribution programs this sub-activity will require $722,839 including 11 person-years.

The following student programs:

- Duff-Rinfret Bursaries ($95,500)
- Native Law Students ($267,600)
- Civil Law/Common Law Exchange Program ($242,000)

as well as a number of annual grants and contributions totalling $2,634,600 are administered by the Program.

Figure 16 sets out the total national criminal legal aid expenditures shareable between the federal and provincial governments and the federal contribution to those expenditures. Figure 17 shows the number of criminal cases completed in which legal aid was granted. Some caution must be used, however, in interpreting this caseload data. The federal government's data is provided by the provinces and among provinces there is no consistency respecting the definition of the term "case". Furthermore, reporting of all legal aid activities is not

complete in all provinces. Nonetheless, the available data does, on the whole, present a general trend of legal aid services in Canada. Efforts are being made to improve the quality of legal aid statistics, both by the Department of Justice and the Canada Centre for Justice Statistics.

Figure 16: Total Expenditures on Criminal Legal Aid with Federal Contribution ($000,000)

* Under the Legal Aid Agreement signed with the provinces in March 1984, federal payments to the provinces for the legal aid expenditures changed from a lag year basis to a current year basis starting in 1983-84. As a result of this agreement the provinces were not paid for the 1982-83 expenditures. During 1983-84, they were paid only for the 1983-84 expenditures. However, the Yukon and Northwest Territories did receive payment for 1982-83. If, in the future a province withdraws from the agreement, it will receive payment for the 1982-83 expenditures.

Figure 17: National Criminal Legal Aid Caseload

Figure 18 provides data on the federal contribution to the Native Courtworker Program, broken down by province and territory. This program is funded on an equal cost-sharing basis with the provinces and the territories.

Figure 18: Federal Contribution to Native Courtworker Program ($000)

	1983-84	1984-85
British Columbia	627.2	589.7
Alberta	681.5	760.8
Saskatchewan	449.3	430.4
Manitoba	196.1	230.5
Ontario	400.0	429.0
Quebec	219.7	340.1
New Brunswick	-	-
Nova Scotia	-	-

1983-84 4	19,749,404	2,442,992	12.3
1984-85 4	*	2,549,000	
1985-86 4	*	2,626,000	

* Amount of compensation paid for those years by the provinces and territories is not available.

1 For Alberta, January-March 1976; no federal-provincial cost-sharing agreement existed for earlier periods.

2 No claims were received from the Yukon for 1975-76.

3 Up to 1980-81, exclusive of Prince Edward Island and Nova Scotia, for which jurisdictions no federal-provincial cost-sharing arrangements exist.

4 From 1981-82, exclusive of Prince Edward Island, which is now the only jurisdiction without a criminal injuries compensation program.

E. Administration

Objective

To provide policy and management direction and coordination to the Department of Justice; to provide central administrative services to the Department of Justice and the Law Reform Commission of Canada; and, to operate a Central Divorce Registry for Canada.

Resource Summary

This activity accounts for approximately 9% of the 1985-86 Administration of Justice Program expenditures and 18% of the total person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Central Services	11,402	191	10,111	193	breakdown	
Corporate Management	3,406	58	2,955	60	not available	
	14,808	249	13,066	253	12,586	256

The expenditures for this activity will be applied as follows: 64% for salaries and wages and contributions to employee benefit plans; 35% for operating expenditures; and, 1% for capital expenditures.

Description

This Activity consists of the following sub-activities.

Central Services: Provides a full range of services, advice and information needed for the acquisition, allocation and control of the human, financial and material resources of the Department of Justice and the Law Reform Commission of Canada. Included in those services are financial, administrative, personnel, library, official languages and security services. A central divorce registry for Canada is maintained in which are recorded divorce actions and a searching service in connection with all divorce petitions proceeding to trial.

Corporate Management: Provides the Department of Justice with management and policy direction, program evaluation and internal audit services, communication services, and development and coordination of long-range plans.

Performance Information/Resource Justification

Figures 22 and 23 show respectively the ratio of Administrative Services expenditures and person-years to the total program costs.

Figure 22: Relationship of Administration expenditures to total Administration of Justice Program expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
	$	$	$
Administration of Justice Program Expenditures	158,725	153,414	109,198
Administration Expenditures	14,808	13,066	12,586
Percentage of Total	9.3%	8.5%	11.5%

The Department's average expenditures on training and development have been historically low when compared to those of the Public Service. An increase of $80,000 in this fiscal year will permit greater participation in training programs provided by the law societies to keep officers abreast of developments in the various functions and fields of law.

During this fiscal year, the Department expects to begin the operation of its automated opinions and precedents retrieval system. Lawyers in the Department will be able to search an index in either French or English, by means of remote terminals, to determine whether any previous departmental file material, in specified areas of importance, would be useful in their current work.

Since the legal profession has historically been highly document-oriented, productivity and effectiveness gains can be anticipated through greater use of word processing and information retrieval systems. The Department will accelerate its purchase of related equipment in this fiscal year. A new automated financial budget control system will also be implemented to improve information provided to managers.

Figure 23: Relationship of Administration person-years to total Administration of Justice Program person-years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

Economic Council of Canada

1985–86 Estimates

Part III

Expenditure Plan

1013

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Economic Council of Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources, as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more detail on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $7,859,000 in 1985-86 in support of the Economic Council of Canada Program. The remaining expenditures, estimated at $786,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Financial Requirements by Authority ($000)

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Council is charged by its Act to issue policy advice, to further public education and to contribute to the formulation of public consensus on economic issues and relevant policy thrusts. The Council's commitment to these tasks involves an ongoing process of consultation with all sectors of the economy. Parallel economic research, policy analysis and communications programs feed into the process to enable the Council to discharge its responsibilities. In these respects, the following specific undertakings are to be emphasized in 1985-86:

- submission of the Twenty-Second Annual Review to the Prime Minister and, more broadly, to the Canadian public, in the fall of 1985 (see pages 13, 14, and 17);

- publication of studies concerning: the taxation of capital income; the policies, practices and performances of government enterprises; the principal issues related to health care programs; the efficiency, effectiveness and equity dimensions of the Canadian education systems; and the policies and programs affecting Canada's energy development and security (see page 17);

- the issuing of technical discussion papers on the labour market implications of technological changes and on the principal economic issues confronting Canadian agriculture (see page 17); and

- publication of the proceedings and edited versions of papers for the Council-sponsored colloquia on the role of women in the work force and on the performances of certain Crown corporations in light of their explicit and implicit objectives (see pages 14, 17 and 18).

2. Financial Summary

Funding requirements for the Economic Council of Canada, for both the Estimates and the current fiscal year, are presented in Figure 1.

Figure 1: Financial Summary ($000)

	Main Estimates 1985-86	Forecast 1984-85	Change
Ongoing Work of the Economic Council	8,645	8,345	300
Authorized person-years	133	133	--

The net increase of $300,000 in 1985-86 requirements over the 1984-85 forecast reflects provisions for an increase of $311,000 to cover inflationary cost in salaries and employee benefits and a decrease of $11,000 to cover sponsorship of Expo 86 (funds given to Transport Canada).

B. Prior Years' Performance

1. Highlights of Prior Years

No change is expected to the Council's performance relative to the goals highlighted in its 1984-85 expenditure plan.

Highlights of the program's performance in 1983-84 were:

- publication of two consensus documents; "The Bottom Line: Technology, Trade, and Income Growth", and the "Twentieth Annual Review: On the Mend";
- release of twenty-six technical (discussion) papers and five research studies dealing with major economic issues ranging from energy and western development to labour market matters (see Figure 7, page 19);
- wide ranging consultation with respect to work in progress which led to postponement of publication of reports on western development and productivity growth but allowed greater accommodation of extensive pre-publication consultation in the final reports (although basic research and policy analysis were completed during 1983-84);

- revision, updating and restructuring of the CANDIDE econometric model of the Canadian economy (with finishing touches applied in early 1984-85);

- a sharp stepping-up of the Council's consultative program, particularly with constituencies other than the federal government (see Figure 8, page 20); and

- approval by Council of the work programs, staffing and funding of two new research and policy analysis groups during 1983-84, one to examine the very complex issue of taxation of capital income and the other to study the roles, objectives and performances of Crown corporations (government enterprises), at all levels of government, which are involved in the provision of goods and services to the public (see Figure 12, page 23).

Although not reflected in its 1983-84 expenditure plan, the Council participated in the hearings of the Macdonald Commission on several occasions. Full-time Council members and staff economists provided professional advice to the research and policy analysis program of the Commission with the mutual understanding that both parties retain complete independence on the development and presentation of their reports and policy recommendations. Moreover, on invitation, Council members and staff contributed analysis and technical recommendations to the Small Business Consultative Committee and made presentations to a number of parliamentary task forces.

2. Review of Financial Performance

Figure 2: Main Estimates and Actual Expenditures Comparison for 1983-84 ($000)

	Main Estimates 1983-84	Actual Expenditures 1983-84	Change
Total Program	8,148	8,064	(84)

3. Research Expenditure Trends - 1980-81 to 1984-85

Figure 3 provides an overview of trends in expenditure levels among the three main functions of the Economic Council from 1980-81 to 1984-85. The graph depicts the increased priority assigned to the Policy Advice and Public Education function relative to the Research and Administration functions since 1980-81. It also highlights the fact that the Council's expenditure level is actually lower on the basis of constant 1980-81 dollars (the Consumer Price Index (CPI) was used as the deflation factor).

Figure 3: Expenditure Distribution by Function from 1980-81 to 1984-85[1]

[1] Except where otherwise indicated, figures represent current dollar values.

[2] The mid-year CPI values were used to calculate the constant (1980-81) dollar, expenditure levels.

Note: Included in each function are prorated overhead costs such as employee benefits, severance payments and overtime.

C. Background

1. Introduction

The Economic Council of Canada is an independent research and advisory body, established by Parliament in 1963, with broad terms of reference to study and report on a wide range of matters relating to Canada's economic development. The Economic Council remains the only national body with a special ongoing mandate through Parliament to address economic policy issues pertaining to the medium and long terms.

2. Legal Mandate

The Council was established by Parliament on August 2, 1963, under the Economic Council of Canada Act, and reports to the Prime Minister. Under the Act, the Council must transmit to the Minister responsible an Annual Report of its activities, including financial statements, and must prepare and publish an Annual Review of medium and long-term economic prospects and problems. The Act does not constrain the Council's mandate in respect to the sectors of society to which its policy advice is directed, the economic issues that it chooses to research, or the consultations and communications that the Council may decide to undertake.

3. Program Objective

The objective of the Economic Council is to advise and recommend how Canada can achieve the highest possible levels of employment and efficient production in the medium and long terms in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards.

4. Program Description

Within the broad range of duties specified by the Act, there are three sets of activities through which the Council delivers its program:

- by carrying out economic research and policy analysis, consulting with representatives of all economic interests, and developing its own policy recommendations;
- by communicating findings and recommendations to decision-makers in all sectors of the economy for consideration in the development of their own policies and strategies that bear directly on the performance of the economy; and
- by fostering a fuller appreciation of economic issues throughout the country.

Figure 4 illustrates how the functional activities of the Economic Council (excluding administration) are directed towards achieving its program objective.

Figure 4: Functional Activities of the Economic Council

Solid line boxes indicate functional activities.
Dotted line boxes indicate processes.
Dash line boxes indicate constituencies.

5. Program Organization for Delivery

The Economic Council engages in only one main activity, which is synonymous with the program. The Council is comprised of an appointed board made up of three full-time and up to twenty-five part-time members. The full-time members, the Chairman and two directors, manage the work of a staff of economists and other specialists. The part-time members of the Council are representative of various sectors of Canadian society. They assist in setting the organization's research priorities, play a role in the preparation of major reports, such as the Annual Review, and serve on advisory groups to each major research project. They receive no salary or honoraria although their expenses are covered by the Council's budget.

As shown in Figure 5, the staff is organized into a number of research groups and service divisions. Each research group addresses specific problems and prospects facing the Canadian economy. The service divisions provide research support in the form of word and data processing, library and publication services. They also furnish publication, communications and information services related to the policy advice and public education functions and overall administrative services. Research staff are reassigned as new groups are initiated and completed projects are phased out. Excluded from Figure 5 are research groups that will terminate their projects before mid-1985 and those which may be formed, upon Council approval, during the year.

Figure 5: Organization Structure (as of April 1, 1985)

The Council's program is comprised of three main functions: research and policy analysis, policy advice and public education, and general administration. For 1985-86, the functional deployment of the Council's resources is as follows:

Research and Policy Analysis	95 person-years	$5,910,000
Policy Advice and Public Education	24 person-years	1,547,000
General Administration	14 person-years	1,188,000
	133 person-years	$8,645,000

D. Planning Perspective

1. Environment

Fulfilling the Council's mandate entails an examination of the many factors contributing to the achievement of the broad economic goals outlined in the Act -- namely, high and productive levels of employment, reasonable price stability, high and sustained levels of output, a viable balance of payments, and an equitable distribution of rising incomes.

The Council must address the full range of medium and long term strategies contributing to the achievement of these sometimes conflicting goals in the face of continually changing domestic and global conditions. Hence, the Council is required to expend substantial effort in monitoring, anticipating, and analysing a wide array of economic, political, and social issues. These range from demographic trends to technological change; from international economics and socio-political order to the operational activity of firms, industries, and labour forces in communities throughout Canada.

Factors that come into play in the process of choosing between proposals include: the studies being undertaken by other economic research and policy advisory groups; the judgement of part-time members, who take a broad interest in economic issues against a background of particular experience; and available human and financial resources.

2. Initiatives

The Council plans to undertake the following initiatives during 1985-86:

- The publication of the Twenty-Second Annual Review, which reflects the research and analysis effort of the Annual Review Group, the CANDIDE Group and the deliberations of Council itself, will provide an evaluation of past performance and alternative outlooks for the medium term in all major

dimensions of economic activity. As well, it will provide analysis of the persistent shortfall of Canada's economic growth below its potential and it will make policy recommendations designed to raise such performance over the medium term (see page 17).

- The Council will issue a report on its colloquium on women in the work force covering background research, proceedings, and conclusions and recommendations of participants (see page 18).

- In conjunction with other federal research and granting councils, the Council will sponsor a series of regional seminars, as part of the Expo 86 program, on the role of research and development in contributing to the satisfaction of social and environmental aspirations over the longer term.

3. Update on Previously Reported Initiatives

The accomplishments of the Council relative to its initiatives of prior years are presented under "Prior Years' Performance" on pages 7 and 8 of this document.

4. Program Effectiveness

Since there are various sources of policy advice and since advice offered by the Council need neither be acknowledged nor adopted by decision-makers, the effectiveness of the Council's program, in contributing to improved economic performance, can only be evaluated indirectly. The level of public interest in the Council's reports and the degree of integration of its recommendations into policy formulation can be used as proxies in assessing the impact of the Council on the economic performance of Canada. It is not possible to measure the latter but the sustained level of interest generated by the Council's research and consultation accomplishments in recent years can be identified. For example, the continuing interest in the Council's studies on pensions, on financial markets, on regulations and on the Newfoundland economy are indications of the effects of the Council's research in these areas. The following also serve to indicate the impact of Council work:

- The Council's effectiveness as a research institution is reflected in the numerous requests made by other research institutions to participate in joint undertakings. This stems in part from the strategy of "peer review" of research plans and of work in progress at crucial junctures during the development of consensus documents. The Council's participation in the Economic Research Group, which is composed of chief executives of all major economic and policy research

institutions, assures that duplication of effort is minimized. The co-operative and supportive nature of Council's operations is highlighted by the early agreements with the Macdonald Commission whereby the Council's full-time members and staff participated in the Commission's economic working groups charged with research program development although not in its policy formulation activities. Likewise, the Council has contributed professional testimony, on invitation, to several provincial commissions.

- In the area of fostering a fuller appreciation of economic issues throughout the country, a 1983 survey of free subscription magazines in the category "corporate business, general household interest, and travel" indicates that the Council's economic affairs publication, entitled Au Courant rates well above others surveyed with respect to reader interest. As well, the full-time members of Council have appeared on numerous "open line" programs and have participated in panel discussions and interviews on a wide range of economic issues. The capacity to accept invitations to participate in such public information forums is less than the number of invitations to do so.

- The Council's report "The Bottom Line: Technology, Trade, and Income Growth" was issued in June 1983. This report establishes the Council as a leading investigative body on the question of productivity improvement in the service industries where most Canadians now work and where further employment growth opportunities are most likely to occur. In 1984, the Council agreed to a request by a federal department to prepare a detailed research project outline related to productivity in service industries. Other consultative follow-up has been extensive.

- The Council's Twentieth Annual Review "On the Mend" was released in September 1983. Nineteen policy recommendations in such areas as fiscal and monetary issues, income policies and inflation, savings incentives, labour market issues, social issues, and international trade were presented with elaboration as to how each might benefit the performance of the economy over the medium term. More than a year after its release, the Council is still being called upon to discuss the Review's proposals.

5. Performance Information/Resource Justification

The Economic Council must operate within a given level of resources. The level and availability of resources exerts practical constraints on the configuration and overall level of activity of Council's operations. Thus, significant initiatives that require additional resources are dependent upon enabling policy and resourcing decisions. The Prime Minister may direct the Council to undertake such initiatives.

The process of research, analysis and consultation (see Figure 4, page 11) which leads to the publication of consensus documents involves a cycle of two and one-half to three years. Thus, results in a given year reflect resource applications of both the current and of several previous years.

Figure 6 depicts the distribution of the Council's budget for 1983-86 for each function and research project.

Five year trends of publication and institutional relations activities are provided in Figures 7 and 8 respectively. In each area the resource application will tend to be stable over the current and upcoming years. Additional information relative to expenditures on research projects and a listing of Council publications are presented in Section II of this document (see pages 23-26).

Reporting of operational performance relative to the 1983-84 expenditure plan is presented under "Prior Years' Performance" on pages 7 and 8 of this document.

Figure 6: Resources and Results by Function and Major Project for 1985-86

	($000)	Person-Years	Planned Results
A. Research and Policy Analysis Function			
Research Groups			
Annual Review Groups[1]	351	5	The publication of the 22nd Annual Review by the end of 1985.
CANDIDE Group	651	10	22nd Annual Review.
Government Enterprises Research Group	533	8	Completion of research and analysis phase by mid-1985-86 and the production of a Council consensus report on this issue in 1986.
Taxation Research Group	659	9	Completion of research and analysis phase by the end of 1985-86 and the production of a Council consensus report on this issue in 1986-87.
Labour Market Impacts of Technological Change Research Group	682	9	Release of interim reports and technical research papers and consultation with outside experts and interest groups. Consensus report is scheduled for 1986-87.
Agriculture Project	216	3	Release of interim reports and technical research papers and consultation with outside interest groups. Consensus report is scheduled for 1987-88.
Explorations Research Group	331	5	Research reports and discussion papers into major economic issues such as education and health care plus proposals for new research projects.

	($000)	Person-Years	Planned Results
Other Direct Research	565	8	Design and initiation of research programs related to two major economic issues selected by Council.
Subtotal	3,988	57	
Research Support	1,922	38	Word and data processing, library services, and publication of research reports.
Total, Research and Policy Analysis	5,910	95	
B. Policy Advice and Public Education Functions			
Council Members[2]	410	3	Formulation of policy recommendations and their dissemination to political and private sector decision-makers, consultation on the means to develop consensus on economic issues, and public education efforts.
Support Groups	1,137	21	Publication of proceedings of colloquia on women in the work force and government enterprises, media and institutional relations, information and communications services.
Total, Policy Advice and Public Education	1,547	24	
C. General Administration	1,188	14	Personnel, administrative, and financial services for overall Council operations.
Total, Economic Council	8,645	133	

[1]Person-year data represent a full year's allocation to the Annual Review process rather than to a discrete Annual Review document.

[2]The person-years do not include the part-time Council members as they do not receive salary. However, expenses incurred by them and paid by the Council are included in the estimates.

Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 9: Expenditures by Object ($000)

	Main Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	5,629	5,404	5,051
Contributions to employee benefit plans	786	700	747
	6,415	6,104	5,798
Goods and services			
Transportation and communications	444	444	442
Information	303	303	198
Professional and special services	1,116	1,127	1,248
Rentals	54	54	51
Purchased repair and upkeep	66	66	65
Utilities, materials and supplies	198	198	207
All other expenditures	1	1	2
	2,182	2,193	2,213
Total operating	8,597	8,297	8,011
Capital	48	48	53
Total expenditures	8,645	8,345	8,064

2. Personnel Expenditures

Figure 10: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	1985-86	1984-85	1983-84		
Management	14	15	15	50,350-96,300	72,251
Scientific and Professional	40	42	45	13,609-88,120	47,900
Administrative and Foreign Service	27	26	23	12,766-66,252	40,166
Technical	18	17	16	10,719-63,173	32,099
Administrative Support	34	33	36	12,636-37,130	24,860

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

2. Council Publications Spring 1980 to Spring 1984

The range of socio-economic issues addressed by the Council is reflected in the publications issued, in both official languages, under its auspices. The full list is too extensive to be provided in this document; however, the following list is indicative.

Annual Reviews

Seventeenth Annual Review: A Climate of Uncertainty, 1980
Eighteenth Annual Review: Room for Manoeuvre, 1981
Nineteenth Annual Review: Lean Times: Policies and Constraints, 1982
Twentieth Annual Review: On the Mend, 1983

Council Reports

Newfoundland: From Dependency to Self-Reliance, 1980
Reforming Regulation, 1981
Financing Confederation: Today and Tomorrow, 1982
In Short Supply: Jobs and Skills in the 1980s, 1982
Intervention and Efficiency: A Study of Government Credit and Credit Guarantees to the Private Sector, 1983
The Bottom Line: Technology, Trade, and Income Growth, 1983

Conference Proceedings

Reflections on Canadian Incomes: Selected papers presented at the Conference on Canadian Incomes, 1980
Peering Under the Inflationary Veil: Proceedings of a Conference on Inflation-Induced Distortions in Financial Reporting and Taxation, 1982

Research Studies

Regional Issues:

A Promise of Abundance: Extended Fisheries Jurisdiction and the Newfoundland Economy, 1980
A New Approach to Frictional Unemployment: An Application to Newfoundland and Canada, 1980
Language and Earnings in Montreal, 1980
Empirical Testing on Newfoundland Data of a Theory of Regional Disparities, 1981
The Trees Behind the Shore: The Forests and Forest Industries in Newfoundland and Labrador, 1981

Labour Markets:

An Analysis of Turnover in Ontario Industrial Establishments, 1980
Minimum Wages: The New Issues in Theory, Evidence, Policy and Politics, 1980
Meeting Skill Requirements: Report of the Human Resources Survey, 1982
Job Search Behaviour, Unemployment, and Wage Gain in Canadian Labour Markets, 1982
Unemployment, Employment, and Non-Participation in Canadian Labour Markets, 1984

Pensions:

Private Pensions in an Inflationary Climate: Limitations and Policy Alternatives, 1980
The Foreign Experience with Income Maintenance for the Elderly, 1980
The Future Financing of the Canada and Quebec Pension Plans: Some Alternative Possibilities, 1980
The Nature of Public Pension Plans: Intergenerational Equity, Funding, and Saving, 1980
Redistributive Effects of Canada's Public Pension Programs, 1980
The Future Population and Labour Force of Canada: Projections to the Year 2051, 1980

Regulation:

Compensation of Pollution Victims in Canada, 1981
The Public Regulation of Commercial Fisheries in Canada, 1981
Farm Incomes in Canada, 1982
The Choice of Governing Instrument, 1982
Economic Intervention and Regulation in Canadian Agriculture, 1982

Relationships with Developing Countries:

Canada's Trade Relations with Developing Countries: The Evolution of Export and Import Structures and Barriers to Trade in Canada, 1980
Canadian Private Direct Investment and Technology Marketing in Developing Countries, 1980

Inflation and Its Impact:

Towards a Better Understanding of the Consumer Price Index, 1980
Wage Inflation in Canada, 1955-75, 1980
Ex Post Aggregate Real Rates of Return in Canada: 1947-76, 1982

M-11

Financial Markets:

Government Assistance to Export Financing, 1984
Government in Loan Subsidies, 1984

Productivity and Technological Change:

Energy Prices and Productivity Trends in the Canadian Manufacturing Sector, 1957-76: Some Exploratory Results, 1981
The Adoption of Computer Technology in Selected Canadian Service Industries, 1981
Approaches to an International Comparison of Canada's R&D Expenditures, 1982
Canadian Productivity Growth: An Alternative (Input-Output) Analysis, 1983

Fiscal Federalism:

Equalization in a Federal State: An Economic Analysis, 1982
Internal Migration and Fiscal Structure: An Econometric Study of the Determinants of Interprovincial Migration in Canada, 1982

Other:

The Impact of Investment Incentives on Canada's Economic Growth, 1983
Marriage, Population, and the Labour Force Participation of Women, 1983

Note: In addition to the above list, over 90 technical discussion papers were issued during this same time period. As well 28 working papers and 24 technical reports were published, from 1980 through 1982, in connection with the Regulation Reference.

Employment and Immigration Canada

1985–86 Estimates

Part III

Expenditure Plan

1041

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Employment and Immigration Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are five chapters in this document. Chapter 1 provides an introduction to the Commission/Department. Chapters 2, 3 and 4 present the Expenditure Plans for each of the Commission/Department's Programs, and Chapter 5 presents the Unemployment Insurance Account.

Chapters 2 to 4 begin with extracts from Part II of the Estimates for the particular Program being described. This is to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

Each of these chapters that contain Program Expenditure Plans is divided into sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Chapter 5, the Expenditure Plan for the Unemployment Insurance Account has its own format, due to its unique nature.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each Program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Commission/Department Summary	1-1
Corporate and Special Services Program	2-1
Employment and Insurance Program	3-1
Immigration Program	4-1
Unemployment Insurance Account	5-1

Commission/Department Summary

Roles and Responsibilities of Employment and Immigration Canada

The passage of Bill C-27, the Employment and Immigration Reorganization Act, in 1977, created the Canada Employment and Immigration Commission by integrating the Unemployment Insurance Commission and the Department of Manpower and Immigration. The legislation also created the Department of Employment and Immigration which provides services to the Commission and the Minister in the form of two major activities: Strategic Policy and Planning, and Public Affairs. The Commission and the Department together are titled the Canada Employment and Immigration Commission/Department (CEIC/D).

The Commission/Department administers its programs and services under the following Programs:

- Corporate and Special Services Program (see chapter 2). This new consolidated Program incorporates the former Departmental Administration Program, the Commission Administration Program, the Annuities Program and the Social Insurance Number activity previously reported under the Employment and Insurance Program. Its objective is to ensure the development and implementation of policies and programs, and provide strategic operational and administrative support to CEIC/D.

- Employment and Insurance Program (see chapter 3).

- Immigration Program (see chapter 4).

Funding for both the Commission and the Department is provided in the Social Affairs envelope, administered through the Social Development Cabinet Committee. Broadly defined, this Committee oversees "the development of approaches to improve and integrate the delivery of social benefits", and oversees those federal government agencies having programs that "provide support to the welfare of the individual and to social development".

Operating within this framework and in cooperation with the public and private sectors of the economy, CEIC/D has two basic aims:

- to develop and apply a framework of policies and programs necessary for the efficient functioning of the Canadian labour market; the framework must be consistent with national economic and social goals and must promote

  - a labour force which meets national occupational needs,

  - an economy capable of growth and adaptation without undue burden on individuals, groups or regions, and

- equality of opportunity to compete for and have access to jobs.

- to develop and implement programs and policies to promote

  - an immigration flow responsive to Canada's social, cultural, demographic and economic needs,

  - the fulfillment of Canada's international commitments and humanitarian traditions,

  - the early and successful adaptation to Canadian society of people admitted as permanent residents, and

  - effective control of people seeking to enter or stay in the country, taking into account the health, safety and security of Canada.

Organization Structure

The Commission is composed of a Chairman, Vice-Chairman and two Commissioners. The Chairman is the presiding officer of the Commission. The Vice-Chairman exercises such powers, duties and functions as the Chairman may specify under authority found in subsection 8(2) of the Employment and Immigration Reorganization Act. Subsection 8(3) permits the Vice-Chairman to exercise all powers, duties and functions of the Chairman when the Chairman is absent, incapable, or when the position is vacant.

One Commissioner was named following consultation with organizations representing workers, and the other after consultation with associations representing employers. This structure was developed to give labour and management representation in the formulation, approval and implementation of programs affecting workers and employers.

The smaller Department of Employment and Immigration was created so that the government would have a Minister for the portfolio and to strengthen the traditional relationship existing between departments and the central agencies involved in policy-making. The Minister presides over the Department. The Deputy Minister is the chief executive officer, and is supported by the Associate Deputy Minister, the Assistant Deputy Minister responsible for Strategic Policy and Planning, and the Director General responsible for Public Affairs.

By statute, the Deputy Minister and Associate Deputy Minister of the Department of Employment and Immigration are the Chairman and Vice-Chairman, respectively, of the Employment and Immigration Commission. Figure 1 presents the organization of CEIC/D.

Figure 1: Organization Structure

Figure 2: Department Spending Plan by Program ($000)

	Estimates 1985-86	Forecast 1984-85	Change $	Change %	For Details See Page
Corporate and Special Services	286,701	303,073	(16,372)	(5.40)	2-1
Employment and Insurance Program	4,536,814	5,636,970	(1,100,156)	(19.52)	3-1
Immigration Program	125,571	124,355	1,216	0.98	4-1
Gross Budgetary	4,949,086	6,064,398	(1,115,312)	(18.39)	
Less: Recoverable expenditures from the Unemployment Insurance Account	903,885	917,202	13,317	1.45	
Net Budgetary	4,045,201	5,147,196	(1,101,995)	(21.41)	

* In accordance with Sections 63 and 135 of the Unemployment Insurance Act, the costs of administration of this Act shall be charged to the Unemployment Insurance Account and financed through employee and employer premiums. On this basis, the operating costs of the Commission/Department related to the administration of the Unemployment Insurance Act are recovered from the Unemployment Insurance Account. The method used in calculating the UI administrative costs is discussed on page 5-13.

Prioritie

The priorities of Employment and Immigration Canada are determined by, and intended to reflect the overall economic and social goals of the federal government. For 1985-86, the following areas will be given priority attention:

- Strengthening National Employment Services to address the needs of the labour market in the 1980s and '90s.

  - Based on the action plan developed in the previous year, revitalization of National Employment Services has been recognized as a corporate priority through the 1985-86 fiscal year, and will be addressed through implementation of the approved action plan. The broad considerations of the Revitalization Program include a review of the following: Employment Services' role, functions and structure; the appropriateness and operation of its policies, programs, and services relative to the present and future needs of its

clientele; and the efficiency and effectiveness of current and future management processes and related support systems.

- Promoting and consolidating human resource development as an integral part of the policies and plans of the private sector, of other federal government departments and of provincial governments.

  - In line with federal government direction, CEIC/D recognizes that human resource development in the public and private sectors is central to both promoting the equality of employment opportunity in the workplace and helping to create an economy that will grow and adapt without undue burden on individuals or groups of people. CEIC/D embraces this philosophy again in 1985-86, through the promotion of instruments such as human resource planning agreements and their related components, including Affirmative Action consultations, and industrial adjustment service agreements.

- Increasing efforts to resolve the employment problems of youth, particularly their integration into the work force.

  - In anticipation of a continued thrust in this direction, additional emphasis will be placed on activities geared to a mix of practical work experience and formal training.

- Recognizing that employees are our most valuable resource and ensuring that management practices emphasize human values as the basis for maintaining and enhancing quality of service and productivity.

  - As an extension of CEIC/D's internal human resource development concerns of the previous year, the sensitive and progressive management of human resources is seen as a key corporate priority in 1985-86. This will be addressed through initiatives such as the implementation of the internal Affirmative Action plan, with particular emphasis on women, natives, and the handicapped, and through full and extensive use of staff training budgets and exercises. Espousal of this "people first" philosopy, will result in the recognition of value and contribution of the individual employee and, by extension, enhancement of staff productivity and the quality of service provided.

These priorities will be publicized internally and externally to ensure that the orientation of CEIC/D is fully understood by its personnel, clients, and economic partners.

The above extract reflects the new Program structure implemented in 1985-86. For additional details regarding the expenditures and recoveries from the Unemployment Insurance Account, refer to Figure 1 on page 2-8.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

One of the key highlights for 1985-86 is the consolidation of the following into the new Corporate and Special Services Program:

- the Departmental Administration Program;
- the Commission Administration Program;
- the Annuities Program; and
- the administration of the Social Insurance Number activity, formerly under the Employment and Insurance Program.

For 1985-86 the Corporate and Special Services Program has the following goals:

Departmental Management and Administration

Strategic Policy and Planning:

- to enhance the Planning Environment Document (see page 2-25).

Public Affairs:

- to lend public affairs support to the revitalization process, to promote the concept of human resource development, to market all youth programs and to strenghten internal communications (see page 2-25).

Commission Management and Administration

Financial Services:

- to establish an improved feedback mechanism from each component of the Planning and Accountability Process (see page 2-30); and

- to integrate certain functions, such as audit and evaluation, into the Planning and Accountability Process (see page 2-30).

Personnel Services:

- to effectively integrate activities under the Human Resources Management Plan into the Planning and Accountability Process (see page 2-20); and

- to continue the implementation of the Regional Personnel Services System (RPSS) in conjunction with Systems and Procedures (see pages 2-31 and 2-36).

Systems and Procedures

- to upgrade the computer capacity of CEIC/D through the installation of computer equipment at an estimated cost of $23.0 million (see page 2-20 and 2-36).

Administration of Social Insurance Numbers

- to implement the Social Insurance Number replacement card cost recovery program without disruption to the level of service to the public (see page 2-44).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86			Forecast 1984-85				
	Expenditure	Recoverable expenditures from the Unemployment Insurance Account	Net Expenditure	Expenditure	Recoverable expenditures from the Unemployment Insurance Account	Net Expenditure	Change in Net Expenditure	For Details See Page
Departmental Management and Administration	22,741	14,706	8,035	24,138	15,171	8,967	(932)	2-22
Commission Management and Administration	231,415	206,517	25,898	242,715	208,263	34,452	(8,554)	2-26
Systems and Procedures	24,018	18,974	5,044	27,697	20,994	6,703	(1,659)	2-32
Administration of Government Annuities	3,418	-	3,418	3,366	-	3,366	52	2-37
Administration of Social Insurance Numbers	4,516	4,516	-	4,532	4,532	-	-	2-41
Employment and Immigration Advisory Council	593	468	125	625	474	151	(26)	2-45
Total	296,701	244,181	42,520	303,073	249,434	53,639	(11,119)	
Person-Years	3,719	-	3,719	3,932	-	3,932	(213)	

Explanation of Change: The net financial requirements for 1985-86 are 20 per cent or $11 million lower than the 1984-85 forecast expenditures. The decrease is primarily due to:

($ millions)

- a decrease in resources for the Summer Canada Program (63 person-years) (1.4)

($ millions)

- a decrease in resource requirements related to reductions in overhead expenditures and general restraint (2.8)
- a decrease in resources associated with the delivery of Direct Job Creation Programs (56 person-years) (4.1)
- a decrease in common services costs payable to Public Works Canada and Supply and Services Canada (2.4)
- a decrease in funding related to the steamlining of operations for Program delivery (104 person-years) (3.4)
- a decrease in funding requirements for the upgrading of Electronic Data Processing facilities (6.5)
- a decrease in the recovery from the Unemployment Insurance Account 5.3
- an increase in salaries and wages due to inflation 4.9

Explanation of 1984-85 Forecast: The 1984-85 forecast is $11 million higher (24 per cent) than the 1984-85 Main Estimates of $43 million (Extracts from Part II of the Estimates, page 2-4). The difference of $11 million reflects the following major offsetting items:

($ millions)

- an increase in resources for the Summer Canada Program (63 person-years) 1.4
- an increase in resources associated with the delivery of Direct Job Creation Programs (88 person-years) 4.4
- an increase in funding for the upgrading of Electronic Data Processing facilities 6.9
- an increase in funding for accommodation costs payable to Public Works Canada 6.4
- a decrease in resources related to the transfer of the Query Response Centre to the Immigration Program (24 person-years) (0.8)
- an increase in the recovery from the Unemployment Insurance Account (8.8)
- other miscellaneous adjustment (10 person-years) 1.0

The above represent items approved through Supplementary Estimates, items transferred from Treasury Board Vote 10 - Employment Initiatives, and items fully or partially recoverable from the Unemployment Insurance Account in accordance with the UI Act and Associated Regulations.

B. Recent Performance

1. Highlights

The highlights of Program performance for 1984-85 are as follows:

- studies will have been incorporated into the Canadian Occupational Projection System (COPS) for the hospital, shipbuilding, construction and mining sectors; new data bases have also come on stream during the year;

- suitable performance indicators, key volumes and ratios have been identified, developed and approved for the Personnel Division for 1984-85 and 1985-86; and

- briefing sessions have been held on the Planning and Accountability Process with special emphasis on inputs to the Chairman's Planning Guidelines.

The highlights of Program performance for 1983-84 were as follows:

- the Unemployment Insurance (UI) Pay Systems were maintained and enhanced to ensure continued efficient processing at record levels;

- updating of the technology of the UI pay process was continued with the installation of more optical character recognition equipment and programmable mail inserters, and upgraded computer processors;

- in preparation for the introduction of UI legislation (Bill C-56), new systems, procedures and training packages were implemented;

- insurance abuse detection systems were enhanced by implementing the Consolidated Overpayment Detection System, and a cross-match between the insurance-claimant master file and training-recipient files;

- implementation of the Metropolitan Order Processing System was continued with installations in Quebec City, Southern Ontario, and the Prairies; plans for the remaining installations (for 1984-85) were also made;

- implementation of the Insurance On-line System was continued with installations in Ontario, Quebec, and the Prairies; plans to complete the installations (for 1984-85) were also made;

- development of the National Employment Services System continued, in coordination with plans for the revitalization of National Employment Services; and

- a concept for a new computer-assisted immigration processing system was developed in conjunction with the Department of External Affairs.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84						
	Actual			Main Estimates			
	Expenditure	Recoverable expenditures from the Unemployment Insurance Account	Net Expenditure	Expenditure	Recoverable expenditures from the Unemployment Insurance Account	Net Expenditure	Change in Net Expenditure
Departmental Management and Administration	23,330	14,459	8,871	21,471	14,039	7,432	1,439
Commission Management and Administration	227,390	194,790	32,600	219,443	191,155	28,288	4,312
Systems and Procedures	20,709	15,739	4,970	21,519	16,484	5,035	(65)
Administration of Government Annuities	3,121	-	3,121	3,542	-	3,542	(421)
Administration of Social Insurance Numbers	4,633	4,633	-	4,312	4,312	-	
Employment and Immigration Advisory Council	741	563	178	592	459	133	45
Total	279,924	230,184	49,740	270,879	226,449	44,430	5,310
Person-Years	3,889	-	3,889	3,874	-	3,874	15

The above numbers have been adjusted to reflect the transfer of the Social Insurance Number activity, previously reported under the Employment and Insurance Program (Vote 10), and the Annuities Program previously reported separately under Vote 30 (see page 2-54).

Explanation of Change: The major factor contributing to the over-expenditure of $9.0 million was the result of an additional payment to Public Works Canada of $8 million for accommodation. The effect of this additional expenditure, and the following major items approved in Supplementary Estimates, offset by an over-all increase in the recovery from the Unemployment Insurance Account, contributed to the net over-expenditure of $5.3 million:

- reimbursement of part of the 1982-83 administrative costs charged to the UI Account as a result of an accounting adjustment;

- increased operating costs associated with the delivery of the consolidated Direct Job Creation Programs; and

- additional operating costs related to the delivery of the New Employment Expansion and Development Program (NEED).

In addition, the actual expenditures reflect costs incurred for the Summer Canada Program. The related resources were provided from the Treasury Board Vote 10 - Employment Initiatives.

C. Background

1. Introduction

The Corporate and Special Services (CSS) Program consolidates the following three previously existing Programs: the Departmental Administration Program, the Commission Administration Program, and the Annuities Program. In addition, one activity, administration of Social Insurance Numbers, has been transferred to the CSS Program from the Employment and Insurance Program (Vote 10).

2. Legal Mandate

The Department was created under the Employment and Immigration Reorganization Act, which was given assent on August 5, 1977. This statute also created the Canada Employment and Immigration Commission.

In addition, the Government Annuities Account was established on September 1, 1908, under the Government Annuities Act, RSC, c. G6, and was modified by the Government Annuities Improvement Act, SC 1974-75-76, c. 83.

The Government Annuities Act provided legislative authority for the sale of government annuities and the establishment of the Government Annuities Account. The Government Annuities Improvement Act increased the rate of return on government annuity contracts, provided for percentage increases in benefits and discontinued any further sale of government annuities.

3. Program Objective

The objective of the Corporate and Special Services Program is to ensure the development and implementation of policies and programs, to provide strategic, operational and administrative support that enables Employment and Immigration Canada to carry out its mission, and to provide for such other functions allocated to it.

There are six sub-objectives:

- to develop, manage, administer, coordinate and review the policies, priorities and programs of Employment and Immigration Canada to ensure that federal labour market, income-related and immigration policies and programs are developed and implemented in an effective manner consistent with national economic and social goals; and to provide information to the public in an effective and efficient manner;

- to provide effective and timely management, administrative and operational support to the programs of the Commission in accordance with the policies, directives, standards and level of service approved by CEIC/D and the central agencies;

- to design, develop, advise on, implement, provide and maintain efficient and effective systems, procedures and management tools and techniques in support of CEIC/D program and service objectives;

- to administer government annuities contracts in accordance with the Government Annuities Act and the Government Annuities Improvement Act;

- to contribute to the administration of specific government programs through the issuance of social insurance numbers to qualified individuals; and

- to provide support services to the Canada Employment and Immigration Advisory Council.

4. Program Organization for Delivery

Activity Structure: The Corporate and Special Services Program is composed of six activities which relate directly to the six sub-objectives just identified. Each of these activities is divided into sub-activities, as presented in Figure 3. For more details, see Analysis by Activity in Section II (page 2-22 to 2-46).

Figure 3: Activity Structure

Organization Structure: As stated previously, the Corporate and Special Services Program is divided into six activities. Figure 4 relates the Program's organizational structure to its activities by showing the 1985-86 resources required.

Departmental Management and Administration: This activity includes the Minister's office and the offices of the Deputy Minister, the Associate Deputy Minister, Strategic Policy and Planning, Public Affairs and Legal Services (see page 2-22).

Commission Management and Administration: This activity includes the Office of the Commissioners for Workers and Employers, the Regional Executive Directors/Directors General, and the Executive Secretariat. In addition, the following Commission support services are included: Financial and Administrative Services, Personnel Services and the Internal Audit Bureau (see page 2-26).

Systems and Procedures: This activity provides for the design and administration of policies, plans, and programs for CEIC/D's electronic data processing and telecommunications systems and facilities, and the associated clerical and manual systems (see page 2-32).

Administration of Government Annuities: This activity provides for the management of annuity accounts issued to individuals and group under the provisions of the Government Annuities Act, and is administered by the Director General, New Brunswick Region (see page 2-37).

Administration of Social Insurance Numbers: This activity contributes to the administration of specific government programs through the issuance of Social Insurance Numbers to qualified individuals. It is administered by the Director General, New Brunswick Region (see page 2-41).

Canada Employment and Immigration Advisory Council: This group provides support services to the Council of the same name (see page 2-45).

D. Planning Perspective

1. Environment

In providing policy and administrative support to CEIC/D's major Programs (i.e. Immigration, and Employment and Insurance), the Corporate and Special Services Program operates within the same environment, and in some cases must be doubly sensitive to selected influences.

As a major employer, CEIC/D is faced with the same pressures as other employers: the need to respond to the demands of a better-educated work force; to accommodate the need for flexibility in working arrangements required, among others, by single parents; to provide challenge and reward to employees who are not mobile and for whom there are limited chances of promotion; and to respond to the growing expectation for more humanism in the workplace. Through such instruments as the Human Resources Management Plan, greater emphasis is being placed on training to enable employees to deal effectively with a better-informed and more outspoken clientele, in the continuing pursuit of excellent service. Attention will also have to be paid to the accessibility of training to the handicapped, and to the provision of training in new technology at all levels of the bureaucracy. There will be significantly more demands for paid leave, particularly education leave, to facilitate the redirection of careers and to minimize the potential for burnout and rustout. In fact, CEIC/D will have to respond to these changes in a most prompt and effective manner if it is to play a role in leading other employers in the field of human resources management by example.

Having established a role for themselves in areas such as staffing, training, affirmative action, and health and safety, unions can be expected to at least maintain the ground they have gained. While responding to this expanding role, management will have to be increasingly careful to ensure that it is listening to and speaking to all employees represented by the unions.

In terms of relations with our economic partners, particularly the private sector, the development of specific projection tools and the continued encouragement to develop formal bilateral or multilateral agreements with the provinces, industry and individual firms will be important instruments to bring about adjustments in a coordinated way, to avoid skill bottlenecks in the economy and to favour overall growth.

Internally, following the Treasury Board's lead, a variety of proposals may be implemented with a view to improving productivity in a context of fiscal restraint. These could include amendments to legislation, reduction in headquarters controls, modifications of operating procedures and elements of reorganization. At the same time,

the current review and assessment of CEIC/D's audit and evaluation functions, including recognition of the need for better instruments for performance measurement will pave the way for significant improvements in identifying the relationship between program and service objectives, and the results which define those objectives.

2. Initiatives

Initiatives for the Corporate and Special Services Program in 1985-86 include:

Departmental Management and Administration

Strategic Policy and Planning:

- to develop strategies, in consultation with economic partners and provinces, aimed at effective ways of allowing Canadians to obtain the skills and capacities needed to participate fully in our changing labour market; and

- to evaluate various programs in Immigration, Employment Training, Job Creation, Human Resources Development and Insurance.

Commission Management and Administration

Financial Services:

- to integrate the approved Operational Plan Framework into the internal systems and processes.

Personnel Services:

- to improve the representation of target groups within CEIC/D; and

- to implement a comprehensive Human Resources Management Plan within CEIC/D at an estimated cost of $1.2 million and 36 person-years.

Systems and Procedures

- to upgrade computer capacity for CEIC/D through installation of computer equipment at an estimated cost of $23.0 million in order to better support an enhanced level of service and program delivery.

3. Update on Previously Reported Initiatives

Canadian Occupational Projection System (COPS): The basic COP System became operational in 1983-84 at a cost of $1.8 million and 27 person-years. During 1984-85 the following sectors have been incorporated into the system: hospital, shipbuilding, construction and mining. Also, during 1984-85 new data bases have also come on stream.

Task Force on Service to the Public: The toll free telephone service was fully implemented in 1983. This service provides the public with access to information on CEIC/D's main programs. This initiative will cost approximately $2.75 million and 48 person-years.

Human Rights Act: Training instruments were developed and training provided to CEIC/D employees involved in the delivery of service to the public within the approved five person-years and $200,000. Continued training is being provided to meet on-going requirements. CEIC/D policies, programs, procedures and publications are the subject of on-going review to ensure their consistency with the Human Rights Act.

Planning and Accountability Process: In 1984-85, the principles of the Planning and Accountability Process were fully applied to the 1985-86 operational planning, the 1984-85 operation and control, and the 1986-89 Multi-Year Operational Planning processes. Main Estimates, Part III, has also now been integrated into the process, although the introduction of the Operational Planning Framework will necessitate further changes. The first phases of incorporating the audit and evaluation functions were completed, and the remaining phases form part of the 1985-86 plan of action.

4. Program Effectiveness

The overall impact and effectiveness of the Corporate and Special Services Program is measured by the level and quality of service provided to the operating programs of CEIC/D through the various administrative and support activities of this Program.

CSS Program services are assessed directly through the CEIC/D Planning and Accountability Process (P&AP). This process ensures management accountability and provides continuous review, assessment, evaluation and direction for any necessary corrective action by managers and senior executives through

- development, implementation, reporting and evaluation of management contracts; and
- conducting internal audits and reviews.

In addition, there is provision in the Planning and Accountability Process for indirect general assessment of the CSS Program on a periodic basis through program evaluations of other CEIC/D Programs.

Section II
Analysis by Activity

A. Departmental Management and Administration

Objective

To develop, manage, administer, coordinate and review the policies, priorities and programs of Employment and Immigration Canada to ensure that federal labour market, income-related and immigration policies and programs are developed and implemented in an effective manner consistent with national economic and social goals; and to provide information to the public in an effective and efficient manner.

Description

This activity includes the Minister's office and the offices of the Deputy Minister, the Associate Deputy Minister, Legal Services, Strategic Policy and Planning, and Public Affairs, and is composed of the following three sub-activities:

General Administration: This covers the functions of the offices of the Minister, the Deputy Minister, the Associate Deputy Minister and Legal Services.

Strategic Policy and Planning: Strategic Policy and Planning performs research and policy analysis to ensure that federal labour market, income-related, and immigration policies and programs are developed and implemented in an effective manner consistent with national economic and social goals.

Public Affairs: The Public Affairs Branch provides services to CEIC/D in planning, assessment, coordination and operation of information, advertising and promotional projects. The collective efforts of the Branch result in a public who are better informed about the services available through their local Canada Employment Centre (CEC) or Canada Immigration Centre (CIC), the role of CEIC/D's programs and services, and the federal government's efforts on their behalf.

Performance Information/Resource Justification

The following figures show the ratio of departmental management and administration person-years and expenditures to total CEIC/D person-years and expenditures. In both instances, the ratios have remained relatively constant over the three-year period.

Figure 8: Relationship of Departmental Management and Administration Person-Years to Total CEIC/D Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Departmental Management and Administration person-years	416	428	417
Total CEIC/D person-years	24,127	26,791	27,065
Percentage of total	1.7	1.6	1.5

Figure 9: Relationship of Departmental Management and Administration Expenditures to Total CEIC/D Expenditures ($000)*

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Departmental Management and Administration expenditures	22,741	24,138	23,330
Total CEIC/D expenditures	1,094,937	1,188,611	1,125,644
Percentage of total	2.08	2.03	2.07

* Excludes transfer payments, courses purchased from provinces and the Outreach Program.

Departmental Management and Administration has identified the following significant planned outputs for 1985-86:

Strategic Policy and Planning

- to enhance the Planning Environment document which draws together all the factors to be taken into account when longer-term directions or priorities are being considered for the organization; this will involve consolidating the data base, improving the linkage between resources and the objective of CEIC/D, as well as developing mechanisms to involve managers at all levels in the strategic planning function.

Public Affairs

- to advise CEIC/D staff on a regular basis of the revitalization process; in addition, as projects are phased in nationally, to inform local employers and client groups of CEC services available through revitalization;
- to promote the concept of human resource development, the need for it and its benefits, as well as the services available through CEIC/D to assist employers and governments;
- to market all youth programs and services to facilitate the integration of young people into the work force; and
- to disseminate timely information on policies, programs and procedures to enhance staff performance in the delivery of service to the public and to recognize outstanding performance.

B. Commission Management and Administration

Objective

To provide effective and timely management, administration and operational support to the programs of the Commission in accordance with the policies, directives, standards and level of service approved by CEIC/D and the central agencies.

Resource Summary

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
General Administration	13,106	243	12,057	259	12,727	219
Financial Services	61,092	1,061	70,654	1,191	57,299	1,172
Personnel Services	23,908	602	24,115	623	25,849	649
Administrative Services	127,985	600	131,075	620	126,267	634
Internal Audit Bureau	5,324	84	4,814	88	5,248	87
Total	231,415	2,590	242,715	2,781	227,390	2,761
Less: Recoverable expenditures from the Unemployment Insurance Account	205,517		208,263		194,790	
	25,898	2,590	34,452	2,781	32,600	2,761

Explanation of Change: The net financial requirements for 1985-86 are 25 per cent or $9 million lower than the 1984-85 forecast expenditures. The decrease is primarily due to:

	($ millions)
• a decrease in resources for the Summer Canada Program (58 person-years)	(1.3)
• a decrease in funding related to the streamlining of operations for Program delivery (87 person-years)	(2.8)
• a decrease in resource requirements related to reductions in overhead expenditures and general restraint	(1.9)
• an increase in salaries and wages due to inflation	2.8

($ millions)

- a decrease in resources associated with the delivery of Direct Job Creation Programs (56 person-years) (4.1)
- a decrease in common services costs payable to Public Works Canada and Supply and Services Canada (2.4)
- an internal transfer of resources to the Systems and Procedures activity (2.2)
- a decrease in the recovery from the Unemployment Insurance Account 2.7

Description

The function of the Commission Management and Administration is to provide a variety of management, operational and administrative services within the over-all objective of the Corporate and Special Services (CSS) Program. Results obtained through the provision of these services contribute to policy and program development and implementation by CSS.

The Commission Management and Administration activity is composed of the following five sub-activities:

General Administration: This sub-activity essentially involves services to facilitate and support the collective work of CEIC/D senior management and incorporates the offices of the Commissionners for Workers and Employers, the regional Executive Directors and Directors General, and the Executive Secretariat.

Financial Services: Within this sub-activity departmental operational planning documents are analysed to ensure that resource needs have been clearly defined, assigned costs and substantiated to enable management to make effective decisions regarding future financial requirements. CEIC/D financial expenditures and operational results are analysed and reported to all levels of management, and general financial accounting services are provided both at national headquarters and regional

offices. In addition, financial policies, systems and procedures are monitored and evaluated continually to assess their appropriateness and effectiveness, and new systems and procedures are developed or existing systems modified to eliminate deficiencies.

Administrative Services: This includes the provision of services to departmental employees and all levels of management in the areas of materiel, facilities, directives, recorded information management, telecommunications and word processing.

Personnel Services: Within this sub-activity appropriate personnel policies, practices and procedures are developed including those related to human resource planning, staff relations, staffing and classification; training, development and counselling of staff; official languages; pay and benefits; data management; affirmative action; organization design and development; and senior management services.

Internal Audit Bureau: This includes the appropriate planning, development, conduct and management of audit assignments to ensure identification of problem areas and adequate recommendations for resolution.

Performance Information/Resource Justification

The following figures show the ratio of Commission Management and Administration person-years and expenditures to total CEIC/D person-years and expenditures. In both instances, the ratios have remained relatively constant.

Figure 13: Relationship of Commission Management and Administration Person-Years to Total CEIC/D Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Commission Management and Administration person-years	2,590	2,781	2,761
Total CEIC/D person-years	24,127	26,791	27,065
Percentage of total	10.7	10.4	10.2

Figure 14: Relationship of Commission Management and Administration Expenditures to Total CEIC/D Expenditures ($000)*

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Commission Management and Administration expenditures	231,415	242,715	227,390
Total CEIC/D expenditures	1,094,937	1,188,611	1,125,644
Percentage of total	21.14	20.42	20.20

* Excludes transfer payments, courses purchased from provinces and the Outreach Program.

The Commission Management and Administration activity has identified the following significant outputs for 1985-86:

Financial Services

- to integrate the spring and fall update of the Multi-Year Operational Plans, including the Main Estimates, and the audit and evaluation functions into the Planning and Accountability Process; and

- to establish an improved feedback mechanism from each component of the Planning and Accountability Process to better reflect the effects of results on long-term planning.

Administrative Services

- to participate with Public Works Canada in the phased implementation of Revenue Dependency spin-off systems, such as those for Accommodation Management Information and Charging for Services, to ensure that CEIC/D's requirements are met. The activity includes the establishment of internal procedures for the implementation of these systems; and

- to assess the 10 prototype CECs of the 80s, offices established in 1984-85 as part of the Revitalization Program for Employment Services. The prototype offices are a vehicle for introducing and testing physical, environmental and technological changes in the work place, to enhance program delivery to CEC clients and provide a favourable work environment for employees. Following the assessment, the changes that have proven effective will be implemented in those sites included in the 1985-86 Property Administration Plan.

Personnel Services

- to continue implementation of the Regional Personnel Services System started in 1984-85. The major thrust of this new system is to facilitate and improve personnel administration by introducing automation in the work environment. The estimated cost for fiscal year 1985-86 will be $2.5 million and 14 person-years.

C. Systems and Procedures

Objective

To design, develop, advise on, implement, provide and maintain efficient systems, procedures, and management tools and techniques in support of CEIC/D program and service objectives.

Description

This activity is undertaken by the Systems and Procedures organization and includes the following responsibilities:

- formulation of policies on the acquisition and use of electronic data processing (EDP) and telecommunications equipment, facilities and services, and the provision of advice, guidance and direction to regions in these matters;
- planning, acquisition, and control of EDP and telecommunications equipment, facilities and services;
- development, implementation, on-going maintenance and enhancement of EDP and telecommunications systems and associated procedures;
- development and on-going maintenance of the operational procedures for the delivery of the Insurance Program; development and maintenance of the training materials for staff involved in the delivery of the Insurance Program;
- provision of advice, guidance and direction to the regions regarding procedures related to insurance claims processing;

- operation of the national headquarters data centre in support of systems development and centralized operational systems; and

- provision of management analysis and forms design and management services.

Due to extensive automation in the delivery of service to the public in both aspects of the Employment and Insurance Program there is a correspondingly high degree of integration. Thus Systems and Procedures not only has direct responsibility for headquarters' EDP and telecommunications activities and the associated clerical systems, but also advises and provides technological and functional support to the regional elements of the Employment and Insurance Program. This ensures efficient use of EDP and program resources for automated delivery of service to the public.

The Systems and Procedures activity is composed of the following five sub-activities:

Employment and Benefit Systems: This involves the development of policies and programs for benefit pay and control systems, manpower systems, wage loss insurance systems, employment systems liaison with regions, and support of the National Systems Coordinating Committee. It includes the Director of Employment Systems and staff.

Information Systems: This covers the development of policies and programs for annuities systems, Social Insurance Number systems, immigration systems, Strategic Policy and Planning systems, financial systems, administration systems, personnel systems, advanced systems, software, programming standards, hardware selection, information systems liaison with regions, Management Information Systems, and coordination. It includes the Director of Information Systems and staff.

Computer Operations: This involves headquarters computer operations; the provision of hardware, operating software and telecommunications support; the development of standards for EDP operation and security; and the monitoring of regional computer centres. It includes the Director of Computer Operations and staff.

Management Consultative Services: This includes administering project management; conducting organization analysis and development; work study; network planning and analysis; systems identification, analysis and design; feasibility studies; and forms design. It includes supervisory, operational and support staff in the Project Consulting Division.

Management: This includes the development of policies and programs to provide an efficient network of computer systems to the Commission. It includes the Executive Director of National Systems and Services, and staff.

Performance Information/Resource Justification

The following figures show the ratio of Systems and Procedures person-years and expenditures to total CEIC/D person-years and expenditures. In both instances the ratios have remained relatively constant.

Figure 18: Relationship of Systems and Procedures Person-Years to Total CEIC/D Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Systems and Procedures person-years	413	420	414
Total CEIC/D person-years	24,127	26,791	27,065
Percentage of total	1.7	1.6	1.5

Figure 19: Relationship of Systems and Procedures Expenditures to Total CEIC/D Expenditures ($000)*

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Systems and Procedures expenditures	24,018	27,697	20,709

Percentage of total	2.19	2.33	1.84

* Excludes transfer payments and courses purchased from provinces and the Outreach Program.

The Systems and Procedures activity has identified the following significant planned outputs for 1985-86:

- to continue the expansion of the Field Operations Support Systems (FOSS III) for the Immigration Program;
- to continue the implementation of the Regional Personnel Services System (RPSS) in conjunction with Personnel Services; and
- to continue the development of the National Employment Services System (NESS) which will consolidate, integrate and link employment-related systems in an on-line mode as part of the revitalization of National Employment Services.

D. Administration of Government Annuities

Objective

To administer Government annuities contracts in accordance with the Government Annuities Act.

Within this objective, goals for 1985-86 include:

- the processing of approximately 1,548,000 annuity payments; and
- the processing of 56,500 enquiries, 8,830 maturities and 7,560 death settlements.

Description

This activity provides for the management of annuity accounts issued to individuals and groups under the provisions of the Government Annuities Act. The Annuities Improvement Act of 1975 formally ended the sale of annuities. This activity represents a distinct component of the Corporate and Special Services Program and corresponds to a unique sub-objective, (see page 2-49 for audited statements of the Government Annuities Account).

The Annuities Branch is a division of National Services situated in Bathurst, New Brunswick. National Services reports to the New Brunswick regional headquarters located in Fredericton, New Brunswick.

The Director General of the New Brunswick region is the manager accountable for delivery of the Annuities activity. The resolution of any policy issues is the responsibility of the Executive Director, Insurance.

Since 1908 more than 500,000 annuity contracts and group certificates have been issued. Of these, approximately 89,000 contracts and group certificates are still in deferred payment status, while about 148,000 are currently under payment. Annuities under payment are held by nearly 123,600 annuitants who receive approximately 1.5 million cheques annually. The servicing of these contracts will continue for at least another 40 years. Figure 23 provides a schedule of dates at which these annuities not yet under payment are slated to mature.

Figure 23: Schedule of Annuities and Maturity Dates as of March 31, 1984

April 1 - March 31	Deferred Individual Contracts	Deferred Group Pension Certificates	Total
Before April 1, 1984	293	285	578
1984-1985	1,945	3,442	5,387
1985-1990	9,221	20,200	29,421
1990-1995	6,067	20,078	26,145
1995-2000	3,299	12,793	16,092
2000-2005	1,845	5,827	7,672
2005-2010	1,020	1,185	2,205
2010-2015	563	237	800
2015-2020	285	49	334
After March 31, 2020	113	8	121
Total	24,651	64,104	88,755

Performance Information/Resource Justification

The major output of the Annuities activity is the number of contracts under administration, the number of annuity payments processed, the number of enquiries processed, the number of maturities processed and the number of death settlements processed. Work load and average unit costs are presented in Figure 24.

Figure 24: Work Load and Average Unit Cost

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Volume	$	Volume	$	Volume	$
Number of contracts administered	225,000	15.19	232,000	14.53	240,000	13.00

Number of death settlements processed	7,200	46.67	7,300	42.58	7,350	41.94

E. Administration of Social Insurance Numbers

Objective

To contribute to the administration of specific government programs through the issuance of Social Insurance Numbers (SIN) to qualified individuals. Specifically,

- the number of social insurance cards issued per person-year will remain relatively constant at approximately 4,538; and
- the cost per social insurance card issued will remain at approximately $5.41.

	-	185	-	188	-	(3)

This activity was previously reported under the "Employment and Insurance Program" (see page 2-54).

Description

The SIN program provides for the issuance and control of Social Insurance Numbers by processing, examining and certifying Social Insurance Number applications and proof-of-identity documents. The administration of Social Insurance Numbers represents a distinct component of the Corporate and Special Services Program and its objective corresponds to a unique sub-objective.

The Regional Director General for the New Brunswick Region is responsible for all operational aspects while the Executive Director, Insurance, is responsible for the development of Social Insurance Number program policy.

Performance Information/Resource Justification

The major output of this activity is the number of social insurance cards issued. It involves both variable and non-variable components.

Resource requirements for variable activities are allocated on the basis of the number of Social Insurance Number applications received for Bathurst operations and the number of Social Insurance Number applications certified for regional activities relating to the proof-of-identity program. Work load and average unit costs are presented in Figure 28.

Figure 28: Work Load and Average Unit Cost

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Volume	$	Volume	$	Volume	$
Number of Social Insurance Number cards issued	835,000	5.41	840,000	5.40	842,360	5.50
Number of Social Insurance Applications received	900,000	3.22	920,000	3.17	1,082,469	2.98
Number of Social Insurance Number applications certified	707,000	1.77	706,000	1.77	742,423	1.53

The trend in past years has seen a reduction in the number of SIN cards issued from a high of one million in the late 1970s to 842,000 in 1983-84. Indications are that it is stabilizing around the 840,000 to 860,000 mark.

F. Canada Employment and Immigration Advisory Council

Objective

To provide support services to the Canada Employment and Immigration Advisory Council.

Description

The activity includes the cost of providing support services to the Canada Employment and Immigration Advisory Council, remunerating its members, and covering their expenses. The Council consists of a Chairman and 15 to 21 other members, to be appointed by the Governor-in-Council.

Performance Information/Resource Justification

This activity provides the Canada Employment and Immigration Advisory Council with support services such as secretariat services, policy and research analysis, consultation and report-writing. The Council advises the Minister on all matters within the Department/Commission's mandate. It receives direction from the Minister once or twice a year. A work program is set up by calendar year and the Council reports to the Minister. The Minister is then required to table the Council's report with their recommendations in Parliament.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 34 shows the total cost of the Program. Revenue credited to the Vote consists of the costs of the Program recovered from the Unemployment Insurance Account in accordance with the Unemployment Insurance Act. Other costs are for accommodation provided by Public Works Canada ($3,870,000), surgical-medical insurance ($582,000), and other miscellaneous services provided free by other government departments ($397,000).

In addition, an estimated $1.0 million in revenue will be generated as a result of the Government's decision to charge a fee of $10.00 for the replacement of Social Insurance Number cards.

Notes to Financial Statement, March 31, 1984

Authority and Purpose

The Government Annuities Account was established in 1908 by the Government Annuities Act, RSC c. G-6, and modified by the Government Annuities Improvement Act, SC 1974-75-76, c. 83.

The purpose of the Act was to assist individuals and groups of Canadians to provide for their later years by purchasing Government annuities. The Improvement Act increased the rate of return on Government annuity contracts, increased their flexibility and discontinued future sales.

The Account is administered by the Canada Employment and Immigration Commission and operates through the Consolidated Revenue Fund.

Significant Accounting Policies

Basis of Accounting: The accounts of the Government Annuities Account are maintained on an accrual basis.

Unpaid Annuities: In accordance with Section 15 of the Act, and with the Government Annuities Regulations, unpaid annuities comprise: (i) in respect of unmatured annuities, accumulated premiums and accrued interest, and (ii) in respect of matured annuities, the present value of such annuities actuarially determined on the basis of such rate or rates of interest and mortality tables as is prescribed.

Actuarial Surplus due to Canada: If at the end of any fiscal year the recorded amount of unpaid annuities exceeds or is less than the calculated amount of unpaid annuities, the difference results in an actuarial surplus or deficit which is charged or credited to the Government Annuities Account within the Consolidated Revenue Fund.

Interest from Canada: Interest from Canada is calculated annually on unpaid annuities, at a rate of seven per cent, as required by the Improvement Act.

Unclaimed Annuities: Unclaimed annuities represent amounts transferred to the Consolidated Revenue Fund in respect of annuities that could not be paid because the annuitants could not be located.

Services Provided Without Charge

Administrative services are provided to the Account by the Canada Employment and Immigration Commission without charge.

For the year ended March 31, 1984, the cost of these services amounted to $3,532,000 (1983 - $3,432,000), including amounts for services provided without charge by other Government departments to the Commission.

D. Changes in Program/Activity Structure

For 1985-86 the Commission/Department has undergone changes in its program/activity structure. Several existing Programs have been combined into a new "Corporate and Special Services Program" as described below:

- the Departmental Administration Program;
- the Administration Program;
- the Annuities Program; and
- the Social Insurance Number activity, except for the Record of Employment and the Unemployment Insurance Tax Enquiries sub-activities which were combined with the Insurance Benefit Services activity.

Figure 38 shows the 1984-85 Main Estimates under both the old and new structures.

Appropriation Authority

Authority is sought in these Estimates to spend $1,189,086,000 during 1985-86 to operate the Employment and Insurance Program. The amount is net of estimated expenditures of $659,704,000 for administrative services to be charged to the Unemployment Insurance Account. Other operating expenditures, an estimated $71,824,000 for employee benefits, will be met under existing statutory authority. Statutory authority also exists for the Government's contribution to the Unemployment Insurance Account and in respect of Fishermen's Benefits, which are estimated at $2,616,200,000 for 1985-86.

Contributions to employee benefit plans	65,798,000	73,395,000	73,395,000
Refunds of amounts credited to revenue in previous years	-	6,796	6,796
	3,001,798,000	2,927,443,519	2,927,443,519
	4,507,122,000	4,900,092,460	4,647,003,216

The above extract reflects the new Program structure implemented in 1985-86. For additional details regarding the expenditures and recoveries from the Unemployment Insurance Account, refer to Figure 2 on page 3-18.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Employment Training: The following goal has been established for Employment Training in 1985-86 (see page 3-38):

- to provide occupational training in areas of the economy where skills are in demand, and to increase the earning and employment potential of workers by
  - the projected purchase of approximately 13.5 million full-time institutional training days;
  - the signing of a projected 12,000 general industrial training contracts; and
  - the signing of a projected 3,800 industrial training contracts in selected highly skilled trades and occupations.

Direct Job Creation: The following goal has been established for Direct Job Creation in 1985-86 (see page 3-47):

- to create jobs for unemployed and underemployed workers and to enhance the employability of disabled, employment-disadvantaged and inexperienced workers, through
  - the creation of 779,173 work-weeks of employment, supportive of contra-cyclical stabilization and developmental objectives (Canada Works);
  - the creation of 122,539 work-weeks of employment and the establishment of 119 corporations in support of local employment growth (Local Employment Assistance and Development);
  - the creation of 610,311 work-weeks of employment supportive of human resource development (Job Corps and Career Access); and
  - the provision of 90,000 training weeks for 3,000 trainees in support of human resource development (Youth Training Option).

National Employment Services: The following goals have been established for National Employment Services in 1985-86 (see page 3-55):

- to facilitate efficient operation of the labour market so that jobs and workers are brought together quickly and successfully through a projected 653,500 Canada Employment Centre (CEC) placements and a projected 203,500 Canada Farm Labour Pool placements and placements resulting from transfers from other regions;

- to encourage and facilitate the geographical mobility of workers by authorizing a projected 40,600 offers of financial assistance;

- to facilitate labour adjustment and encourage human resource planning practices by the private sector through a projected 318 new Industrial Adjustment Service Agreements and 3,789 Work Sharing Agreements;

- to provide people who have special needs with a full range of facilities for employment counselling, remedial skill development and life skills, job experience training and cooperative services with local community agencies, either through the regular CEC services or through services provided by the Outreach Program - through which the number of individuals to be placed in 1985-86 is projected to be 70,000; and

- to stimulate the provision of developmental work-study experience (cooperative education) for secondary and post-secondary students through contributions to salary and other operational costs.

Although the basic mandate remains unchanged, CEIC/D has initiated an extensive review of its performance in providing employment-related programs and services in response to the needs and expectations of its clients across Canada. This Revitalization Program comprises over 50 projects, the majority of which, are expected to be completed in 1985-86.

Insurance Benefit Services: The following goals have been established for Insurance Benefits Services in 1985-86 (see page 3-66):

- the processing of enquiries, claims and appeals in a rapid, accurate and understandable manner, including

  - maintenance of the number of claims with administration errors at a level less than 8.5 per cent of claims handled;

- maintenance of the volume of initial and renewal claims still pending decisions on benefits three weeks after registration at a level not exceeding 12 per cent;

- processing claims for benefits so that the average elapsed time between receipt and registration of an application and the first payment or equivalent date will not exceed 21 calendar days;

- the hearing of a projected 90 per cent of appeals within 30 days of filing;

- the prevention, deterrence and detection of abuse or fraud through the investigation process; and

- the collection of premiums payable to the Unemployment Insurance Account by Revenue Canada (Taxation), and the administration of the premium reduction program, whereby the volume of applications processed will total a projected 36,500.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86			Forecast 1984-85				
	Expenditure	Recoverable Expenditures from the Unemployment Insurance Account	Net Expenditure	Expenditure	Recoverable Expenditures from the Unemployment Insurance Account	Net Expenditure	Change in Net Expenditure	For Details See Page
Employment Training	805,321	14,210	791,111	960,070	14,808	935,262	(144,151)	3-38
Direct Job Creation	426,671	-	426,671	1,087,802	-	1,087,802	(661,131)	3-47
National Employment Services	238,339	209,231	29,108	242,042	202,157	39,885	(10,777)	3-55
Insurances Benefits Services	2,930,490	314,290	2,616,200	3,220,786	337,786	2,883,000	(266,800)	3-66
Program Administration	135,893	121,973	14,020	136,270	113,017	23,253	(9,233)	3-75
Total	4,636,814	659,704	3,877,110	5,636,970	667,768	4,969,202	(1,092,092)	
Person-Years	18,179	-	18,179	20,558	-	20,558	(2,379)	

The above numbers have been adjusted to reflect the transfer of the Social Insurance Number activity to the new Corporate and Special Services Program (see page 2-54).

Explanation of Change: The financial requirements for 1985-86 are 22 per cent or $1,092.0 million lower than the 1984-85 forecast expenditures. This decrease is primarily due to:

	($ millions)
Employment Training	
• a decrease in resources associated with the purchase of courses from the provinces in accordance with training agreements	(22.5)
• a decrease in resources for training allowances provided to trainees	(21.8)
• a decrease in funding resulting from the elimination of the General Industrial Training Program with the exception of that portion identified to meet special training needs	(38.9)
• an increase in the Critical Trade Skills Training Program to reflect the emphasis in training for the shortage of higher skilled trades/occupations	18.1
• a decrease associated with the elimination of the Skills Growth Fund Program	(87.6)
• an increase in salaries and wages ($1.7 million) and in course purchases from provinces ($7.5 million) due to inflation	9.2
• a decrease in the recovery from the Unemployment Insurance Account	0.6
Direct Job Creation	
• a decrease in resources for the Summer Canada Program, including CECs for Students and Native Internship Program (1,082 person-years)	(172.0)
• an increase in resources associated with the Canada Works (Round II) Program (448 person-years)	95.2
• an increase associated with the Youth Training Option Program (38 person-years)	16.4
• a decrease in resources for other Direct Job Creation Programs (1,096 person-years)	(601.5)

	($ millions)
• an increase in salaries and wages due to inflation	1.6
National Employment Services	
• a decrease in resource requirements related to reductions in overhead expenditures and general restraint	(1.5)
• an increase in salaries and wages, and the Outreach Program due to inflation	9.5
• an increase in the recovery from the Unemployment Insurance Account	(7.0)
Insurance Benefit Services	
• a decrease in resource requirements related to reductions in overhead expenditures and general restraint	(2.1)
• a decrease in funding in respect of the upgrading of regional and headquarters computer facilities	(6.9)
• a decrease associated with changes in the Unemployment Insurance work load (325 person-years)	(23.4)
• a decrease resulting from operational savings related to the implementation of the Insurance On-Line System (170 person-years)	(3.6)
• a decrease in the Government's Contribution to the Unemployment Insurance Account	(296.8)
• an increase in the Government's Contribution in respect of Fishermen's Benefits	30.0
• an increase in salaries and wages due to inflation	12.1
• a decrease in the recovery from the Unemployment Insurance Account	23.5
Program Administration	
• a decrease in resources for the Summer Canada Program/Federal Internships (50 person-years)	(0.5)

($ millions)

- a decrease in funding related to the streamlining of operations for program delivery (83 person-years) (2.7)
- a decrease in resource requirements related to reductions in overhead expenditures and general restraint (1.8)
- increase in salaries and wages due to inflation 5.1
- increase in the recovery from the Unemployment Insurance Account (9.0)

Explanation of 1984-85 Forecast: The 1984-85 forecast is $575.0 million higher (13 per cent) than the 1984-85 Main Estimates of $4,394.2 million (Extracts from Part II of the Estimates, page 3-6). The difference of $575.0 million reflects the following major offsetting items:

($ millions)

Employment Training

- an increase in course purchases associated with part time training for women and the Industrial Labour Adjustment Program 8.2
- an increase in funding associated with a change in the dependent care allowances for trainees 4.8
- an increase in resources for the Skills Growth Fund Program reflecting amount not spent in 1983-1984 for approved projects due to construction and equipment delivery delays 9.6
- a decrease in the recovery from the Unemployment Insurance Account 0.7

Direct Job Creation

- an increase in resources for the Summer Canada Program, including CECs for Students and Native Internship Program (1,082 person-years) 172.0
- an increase in resources associated with the Canada Works (Round II) Program (48 person-years) 101.3
- an increase in resources for other Direct Job Creation Programs (602 person-years) 96.8

	($ millions)
National Employment Services	
• an increase in resources for the Outreach Program	7.3
• an increase in resources associated with the new Cooperative Education Program	1.6
• an increase in resources for the Work Sharing Program (73 person-years)	2.7
• an increase in resources for a grant to the Canadian Labour Market and Productivity Centre	2.1
• an increase in resources for the Industrial Adjustment Service Program	8.0
• an increase in the recovery from the Unemployment Insurance Account	(23.3)
Insurance Benefit Services	
• an increase in funding in respect of the upgrading of regional and headquarters computer facilities	10.4
• an increase in funding related to a non-discretionary change in the Unemployment Insurance work load	14.9
• an increase in the Government's Contribution to the Unemployment Insurance Account	160.0
• an increase in the Government's Contribution in respect of Fishermen's Benefits	14.0
• an increase in the recovery from the Unemployment Insurance Account	(25.4)
Program Administration	
• an increase in resources for the Summer Canada Program/Federal Internships (50 person-years)	0.5
• a decrease in the recovery from the Unemployment Insurance Account	5.9

The above represents items approved through Supplementary Estimates, items transferred from Treasury Board Vote 10 - Employment Initiatives, and items fully or partially recoverable from the Unemployment Insurance Account in accordance with the UI Act and associated Regulations.

B. Recent Performance

1. Highlights

The highlights of Program performance for 1983-84 were as follows:

Employment Training: The goal of providing training for occupations in demand was fundamental in 1983-84 as it still is. The specific targets for achieving the goal and the degrees of success in meeting those targets in 1983-84 follow:

- the purchase of 14 million full-time institutional training days; this target was exceeded and 14.6 million days were purchased;

- the projected number of General Industrial Training contracts was 26,200; because of the slow economic recovery and the reluctance of employers to hire and train new employees, the actual number of contracts was 18,565;

- the projected number of Critical Trade Skills Training contracts for 1983-84 was 12,000 and the actual number of contracts signed was 5,987; the number of trainees, however, was 23 per cent above the planned level due to lower than estimated cost per trainee, largely as a result of the introduction later in the year and a program policy which allowed short-term training to take place; and

- the signing of a projected 80 agreements under the Skills Growth Fund; in fact 156 agreements were signed which provided 9,500 new or modernized training places.

Direct Job Creation: In 1982-83, a major review of job creation policies and programs was conducted in order to rationalize and consolidate the previous direct job creation programs. A new policy framework approved by Cabinet on April 18, 1983 identified three distinct but complementary objectives of job creation in support of contra-cyclical labour adjustment and stabilization (Canada Works); long-term community based employment growth (LEAD); and human resource development to ensure equity and skill enhancement for particular labour market groups (Career Access and Job Corps).

The following is a summary of actual performance against plans for 1983-84:

- within this policy framework, the previous 12 job creation programs were consolidated into four new programs; by September 12, 1983 (the target set by the government), all programs were ready for implementation; as part of this process, a number of activities were undertaken, such as the

development of terms and conditions for the consolidated programs; the design of new work instruments; conversion of management information systems; development of workshops at the national, regional and local levels to train staff in new program objectives, criteria and instruments; the development of campaigns, and the informing of MPs and the public of impending changes (see page 2-54 for reconciliation of transfer payments from the old to the new structure); and

- with the introduction of the consolidated programs, a considerable increase in program funds was made available to direct job creation programs, bringing the budget for 1983-84 from its Main Estimates level of $583.6 million to a total of $1,100.0 million, representing a net increase of 88 per cent; the total funds available for consolidated programs resulted in the creation of over four million work-weeks of employment.

National Employment Services: National Employment Services recorded the following achievements in 1983-84:

- CEC regular placements totalled 649,352, an increase of 10.8 per cent over the 1983-84 projection, reflecting improvements in the national economic situation;

- assistance was provided under the Canada Mobility Program in 40,154 instances, an increase of 18 per cent over the 1983-84 projected volume;

- a full range of techniques was tested and/or implemented to assist clients having special needs; these techniques included

  - Outreach: 284 projects were funded at a total cost of $18.6 million and 68,422 clients were placed in full-time or part-time employment;

  - PLACE: a series of 12 booklets used by employment counsellors and clients to determine whether clients are ready for jobs and to identify appropriate measures to overcome barriers to employment;

  - COMPASS: a self-help computerized system for job-searching techniques used by clients; this system was tested in one CEC in 1983-84 and will be further developed for more extensive use;

- Competency-Based Training: a training program for employment counsellors which focuses on those skills required to provide effective services; courses are designed to increase capability for providing employment counselling services to worker clients, particularily those who are not ready for jobs.

- Canada Farm Labour Pools made 215,406 placements and transfers from other regions, which was 33 per cent over the original estimate; this achievement was associated with better-than-average fruit and vegetable harvests;

- Industrial Adjustment Service signed 558 new agreements, an increase of nine per cent over the 1983-84 projection; and

- 5,074 work sharing agreements were approved, 103 per cent greater than the original estimate of 2,500.

Insurance Benefit Services:

- In terms of the processing of enquiries, claims and appeals in a rapid, accurate and understandable manner, the following results were achieved:

  - the volume of initial and renewal claims processed during 1983-84 was 3.4 million; the efficiency in processing them was 589 claims per person-year;

  - the error rate in processing claims for benefits was two percentage points less than forecasted;

  - at the same time as these positive qualitative results were being achieved, the time to process claims was reduced to an average of 23 days compared to the target of 28; and

  - 84.7 per cent of appeals were heard within 30 days of filing compared to the goal of 90 per cent.

- the detection/prevention investigation process resulted in the recovery of $97 million in overpayments and penalties, far exceeding the goal of $56 million;

- continuing entitlement interviews at 358,000 were 36,000 below the established goal reflecting a response to the shortage of employment opportunities; and

- the volume of applications processed relative to the Premium Reduction Program was 34,700 compared to a forecasted 36,000.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84						
	Actual			Main Estimates			
	Expenditure	Recoverable Expenditures from the Unemployment Insurance Account	Net Expenditure	Expenditure	Recoverable Expenditures from the Unemployment Insurance Account	Net Expenditure	Change in Net Expenditure
Employment Training	830,530	10,648	819,882	943,207	11,646	931,561	(111,679)
Direct Job Creation	907,791	-	907,791	583,618	-	583,618	324,173
National Employment Services	221,633	178,367	43,266	217,776	179,833	37,943	5,323
Insurances Benefits Services	3,184,355	330,313	2,854,042	3,241,313	305,313	2,936,000	(81,958)
Program Administration	125,582	103,560	22,022	131,511	113,511	18,000	4,022
	5,269,891	622,888	4,647,003	5,117,425	610,303	4,507,122	139,881
Person-Years	20,927	-	20,927	19,290	-	19,290	1,637

The above numbers have been adjusted to reflect the transfer of the Social Insurance Number activity to the new Corporate and Special Services Program (see page 2-54).

Explanation of Change: The 1983-84 actual expenditures are $139.9 million higher (three per cent) than the 1983-84 Main Estimates. This change in primarily due to:

Employment Training

- slower than anticipated economic recovery resulted in under-expenditures in Critical Trade Skills Training ($76 million) due to the postponement of major development projects and employers' reluctance to become involved in longer-term training;

- delays in construction start-ups and equipment deliveries resulted in an under-expenditure of $37 million in the Skills Growth Fund.

Direct Job Creation

- additional funding through Supplementary Estimates and transfers from Treasury Board Vote 10 - Employment Initiatives for Summer Canada programs, including CECs for Students and the Native Internship Program ($126 million); for job creation activity at the time of the consolidation of job creation programs, primarily for Canada Works ($139 million); and for the New Employment Expansion and Development Program ($78 million).

National Employment Services

- increased expenditures in the Outreach program ($5.0 million) due to an increment in the number of community-based organizations providing employment-related services.

Insurance Benefit Services

- lower than expected Government contribution to the Unemployment Insurance Account ($102 million) offset by an increase in the Governments contribution in respect of Fishermen's Benefits ($20 million).

C. Background

1. Introduction

The Employment and Insurance Program is a major part of the federal government's social and economic development effort. A number of other federal departments and other levels of government have programs that complement this effort.

The Employment and Insurance Program is delivered through a network of Canada Employment Centres (CECs) and related points of service. Their activities are coordinated and supported by a regional office in each province and by national headquarters. The CECs are the focal point for the identification and resolution of local employment and insurance problems. Feedback from them is used in programs to improve the efficiency of the Canadian labour market.

Employer-related services provided through CECs include:

- recruitment of workers; assistance in human resource development; provision of labour market information, information and advice on programs and services, and information and financial assistance for employee training; and provision of information and assistance in the discharge of employers' responsibilities under the unemployment insurance (UI) program.

Worker-related services provided through CECs include:

- referrals to jobs, information on jobs and the labour market generally; access to employment programs such as training, mobility and employment counselling, diagnostic services and in-depth employment counselling for those facing employment barriers; selection and referral for training and income support as applicable; answering of enquiries and provision of information to workers concerning unemployment insurance; provision of information to workers concerning unemployment insurance; processing of claims for benefits and processing of decisions on benefit entitlement.

2. Legal Mandate

The Unemployment Insurance Act is the major legislative base for the Employment and Insurance Program. The program exercises its mandate under the Unemployment Insurance Act and Regulations (including job creation, work sharing benefits and training benefits), the National Employment Service Regulations, the National Training Act and Regulations (formerly the Adult Occupational Training Act and Regulations), the Mobility Regulations and the Labour Mobility and Assessment Incentives Regulations made pursuant to Appropriation Acts.

3. Program Objective

The objective of the Employment and Insurance Program is "to further the attainment of national economic and social goals by realizing the full productive potential of Canada's human resources, while supporting the initiatives of individuals to pursue their economic needs and, more generally, their self-fulfillment through work". The varied activities of the Program are more fully described in the sub-objectives as follows:

- to generally improve the functioning of the labour market and alleviate the effects of cyclical, seasonal, structural and frictional unemployment;
- to assist individuals to make decisions with respect to personal development in the work world and to obtain employment to which they can realistically aspire;
- to assist employers to secure suitably qualified labour and to make effective use of human resources under changing economic and social conditions;
- to provide temporary income support to unemployed workers while they seek employment, or while they are unable to work due to sickness, disability, pregnancy, or adoption;
- to assist individuals to acquire through training the skills and knowledge in demand in the Canadian labour market; and
- to assist disabled persons, clients with special needs, women, natives and other groups to participate in the labour market and to improve their position in it.

4. Program Organization for Delivery

Activity Structure: The Employment and Insurance Program is composed of six major activities. These are divided into sub-activities (see Figure 3).

Organization Structure: National headquarters is responsible for policy development, national planning and the monitoring of program and policy implementation. These responsibilities are assigned to three Executive Directors. The 10 regional headquarters coordinate program implementation and the delivery of services within the local offices under their jurisdiction.

The accountability of managers and the activities for which they are responsible are defined through the activity structure. Figure 3 links the national headquarters and regional organizations to the program activity structure and Figure 4 provides a breakdown of the 1985-86 resources.

Figure 3: Activity Structure

Figure 4: Resources by Organization/Activity ($000)

	Executive Director Insurance	Executive Director Labour Market Development	Executive Director Employment Services	10 Regions	Program Total
Training 956 P-Y		3,120		802,201	805,321

D. Planning Perspective

1. Environment

The Canadian economy grew at a more moderate pace during the first half of 1984 than during 1983. The output of the economy increased at an annual rate of 2.8 per cent in both the first and second quarters of 1984. These rates of growth follow strong increases of 4.8 per cent in the fourth quarter of 1983 and average gains of 7.6 per cent in the first three quarters of 1983.

Growth in economic activity in the second quarter of 1984 was broadly based. This was in marked contrast to the first quarter when growth was dominated by the auto industry, and represents a return to the over-all growth pattern of 1983 when economic activity was widespread.

The Canadian economy is expected to continue to expand at a moderate rate through 1985-86, though the rate of growth will slow as the period progresses.

Employment in the third quarter of 1984 was about 5 per cent above the level recorded in the fourth quarter of 1982, the last quarter of 1981-82 recession, and about 0.1 per cent above the employment level recorded at the peak of economic activity in the second quarter of 1981. The return of employment to its pre-recession level is due to strong growth in employment in the service-producing sector. Employment in this sector declined by 82,000 during the recession and has increased by 381,000 since the turnaround in the economy. In contrast, 497,000 jobs were lost in the goods-producing sector during the recession and only 195,000 of these have been regained. The unemployment rate has declined from an average of 12.8 per cent, seasonally-adjusted, in the fourth quarter of 1982 to 11.3 per cent, seasonally-adjusted, in the third quarter of 1984.

Employment is expected to grow at a moderate rate through 1985-86. During this period, employment in the service-producing sector will continue to grow at a faster rate than in the goods-producing sector. Unemployment will decline slowly through the short term but remain at a high level as individuals enter or re-enter the labour force as employment opportunities increase.

The impact of technological change on employment growth will vary by sector. It is expected to have its strongest impact in the goods-producing sector dampening the rate of growth in this sector over the short term. Some impact will be felt in the service sector but the evidence to date is that it will be less severe than in the goods sector, and employment growth in the service sector will continue to grow at historical rates.

The Employment and Insurance Program's mandate is highly sensitive to labour market conditions, and the impact and effectiveness of operations are measured in terms of the speed and extent to which these conditions are addressed. To this end, the Program, through its policies, programs and services, is, and will be, directing its resources towards immediate and emergent areas of concern over the short to mid-term. Some of these concerns follow.

The Adjustment Process

Meeting the Economy's Need for Skills: Closer links between levels of government, business and the educational system are essential to ensure that the Canadian labour force is developed in a manner appropriate to the changing needs of the economy. It is a key responsibility of CEIC/D to see that the labour force is flexible and prepared to meet changing labour conditions, thereby minimizing bottlenecks which would impede adjustment and growth. Furthermore, once skills are acquired they must be maintained or adapted as requirements change.

Changes in Technology: Technological change is causing major shifts in the industrial-occupational structure of the labour market, changes in skills within occupations and some occupational displacement. In this environment, the development or retraining of Canada's human resources is a key component of future economic growth. It is essential that effective measures are developed and available for identifying growth areas in the labour market and bringing concerned workers and potential employers together.

Improving Human Resource Planning: Successful adjustment requires careful planning and sufficient lead time to allow for the necessary changes to be made. It also requires that this be done in close collaboration between the economic partners.

CEIC/D is working with other federal departments, other levels of government, and the private sector to encourage human resource planning for the short and long terms. CEIC/D is establishing a framework by which the human resource implications of private-sector economic decisions are more fully integrated with federal human resource development policies, programs and services. The objective is to assist Canadian employers to implement their business plans, while maximizing career opportunities for Canadian workers by increasing their skill levels and putting in place on-going training mechanisms to satisfy Canada's occupational demands in light of a changing labour market.

Investing in People: In conditions of continuing high unemployment, the assumption that the majority of young people will integrate themselves into the work force, may no longer be valid. Hence, government policy must put more emphasis on assisting youth to ensure they can contribute to the growth of the economy in the years ahead when they will constitute the mainstay of the work force.

Providing such an opportunity is not confined only to the young, but also to members of society who face barriers to employment. Promoting the chance to invest in oneself is a fundamental objective of social policies.

While change can present problems as old skills lose their value and new ones need to be acquired, it also provides the opportunity to redress inequitable situations by assisting those who have not been able to reach their full potential in the labour force in the past. Of particular concern is the need to facilitate the acquisition of relevant on-the-job experience and access for native people.

Support for the Adjustment Process

Unemployment Insurance: For many individuals, the most direct effect of the structural changes occurring in the economy is loss of employment. For these individuals, unemployment insurance provides temporary income support and is likely to continue to be a major adjustment mechanism. Because of the size and impact of the UI system, it is inevitable that a number of policy issues will continue to surface, including

- the role of the program in the context of the over-all social security system;
- the adaptation of the program to changing labour market structures;
- operational and design questions concerning equity, minimization of negative economic effects, and administration; and
- the cost of the program.

Relocation Assistance: In addition to the broad support provided by UI, there are likely to be continued efforts to make available more focussed and tailored instruments for assisting the occupational and geographic mobility of workers from declining industries to those which are expanding.

It is inevitable that in a time of adjustment some communities will gain, while others will be hard hit, at least during a transitional period. CEIC/D possibly in the context of a broad cooperative concern is ensuring that a balance is achieved between the requirements of the economy for adjustment and of communities for survival.

Effective and Sensitive Delivery of Service : In keeping with an over-all government concern to provide services with maximum effectiveness, CEIC/D will place continuing and growing emphasis on productivity, accountability and improved quality of service. This will demand much adaptability and cooperation on the part of employees, and conscious striving on the part of management towards open and meaningful dialogue with its employees.

2. Initiatives

In response to the anticipated economic environment, the following major initiatives have been identified. Further information as well as the resource implications of these initiatives appear in Section II.

Employment Training (see pages 3-38 to 3-46): In 1985-86 the National Training Program will continue to work towards its goal of training for occupations in demand in the labour market, emphasizing occupations of national importance and taking into consideration regional shortages. This will contribute to the alleviation of bottlenecks and reduce dependence on overseas labour sources.

For institutional training the emphasis will be on methods of linking courses for academic upgrading to the skill-related courses that lead to occupations which are or will be in demand.

Another priority will be to link industrial training to human resource development as an integral part of the policies and plans of the private sector.

Direct Job Creation (see pages 3-47 to 3-54): In 1985-86, job creation programs will continue to address the three major policy objectives established for the 1980s. These are: short-term contra-cyclical measures to deal with unemployment during periods of economic downturn; long-term employment growth in areas of chronic unemployment; and human resource development measures to assist the employment disadvantaged to enter the labour market.

In keeping with CEIC/D corporate priorities, continued emphasis will be placed on youth, women, natives and disabled persons to assist them in successfully entering or re-entering the labour market. Programs will promote activities to help these target groups become productive members of the labour force.

Economic conditions are expected to continue to limit employment opportunities available to returning students during the summer. Because of the critical importance of summer employment for students developing employment and career-related skills to ease their future participation in the labour market, continued emphasis will be placed on summer employment initiatives under job creation programs.

The Youth Training Option is a pilot program, drawing on the collaborative efforts of business, labour and government, to provide young Canadians with the off-site training and work experience needed to perform in a real work setting. The objective of the program is to provide 3,000 to 4,000 youth aged 17 to 21, with a foundation of training and practical experience to facilitate their transition from school to work, to enable them to perform more effectively in the labour market, and to serve as basis for further training in their adult lives. This combination of off-site and work-place training lasts from 9 to 12 months.

National Employment Services

Employment Services (see pages 3-55 to 3-65): The upgrading of the quality of Employment Services, or the "Revitalization Program", as it is known, began in 1982 and will improve CEIC/D's capacity to provide services that are both timely and effective. The objective of the revitalization of Employment Services is to improve substantially CEIC/D's capacity to promote positive and timely adjustments in the labour market.

Revitalization is addressing all aspects of Employment Services' management and operations, but concentrates on the following broad subject areas:

- the role, functions and structure of Employment Services relative to the needs of its clientele;
- the appropriateness, and the efficient operation of the policies and programs that constitute Employment Services' raison d'être, relative to the present and future needs of worker and employer clients; and
- the efficiency of current management processes and support systems.

The revitalization review comprises over 50 projects. Studies and recommendations for a large number of projects have been completed and the next phase will be field testing. The majority of projects are expected to be completed in 1985, but implementation of certain long-term recommendations will take place in phases over several years.

Employer Visits: (These refer to the preparation for and completion of visits to an employer's place of business to discuss the delivery of employment services.) As part of the revitalization effort and in order to improve the effectiveness of services to employers, strategies are being developed to selectively increase the Commission's penetration rate. The emphasis will be on improving the quality of local labour market information and core training for employment counsellors. These initiatives are expected to have an impact on employer visits, vacancies notified and placement results (see Figure 18, page 3-61).

Youth: Under normal economic conditions, the transition from school to work is relatively smooth for the majority of youth, while a significant minority experience severe difficulties. The cyclical downturn has made it difficult for even well-qualified and well-motivated youth to find suitable employment, thus creating an even larger and more serious problem for those who lack skills and work experience. The majority of young people (65 per cent) entering the labour market do so with a high school education or less.

In 1985-86 the goals for youth employment and "employability" are based on strengthening present assistance. In addition to the special focus on youth through direct job creation and training, the following initiative is being introduced:

- a Cooperative Education program which collaborates with school boards, colleges and universities in providing a significant period of hands-on training with a participating employer during the school year, in order to provide work experience related to the student's academic studies.

The United Nations has designated 1985 as International Youth Year. To help focus attention on the major concerns, accomplishments and aspirations of 4.5 million young people in Canada between the ages of 15 and 24, each of the 10 CEIC/D regions has prepared a plan of action which embraces specific initiatives for youth to be carried out within their normal 1985-86 budget.

Self-Help Tools: The process of preparing for conversion of the computerized career information and exploration system, CHOICES, to micro-computers will continue in 1985-86, with actual delivery of micro-hardware to some 85 CECs expected in April or May, 1986. Costs for operation and maintenance of the CHOICES system are forecast at $1,021,000 for 1984-85 and are estimated at $1,034,000 for 1985-86.

The requisition for purchase of 11 micro-computers for COMPASS (the self-help computerized system for job-searching techniques used by clients) has been approved by the CEIC/D. It is expected that the new hardware will be placed for a pilot trial in 10 CECs of the '80s by April, 1985. COMPASS costs for operations and maintenance are forecast at $153,110 for 1984-85 and are estimated at $628,010 for 1985-86, if the pilot trial shows COMPASS to be effective.

National Occupational Analysis and Classification Systems (NOACS): NOACS' mandate is to develop and provide national occupational data bases, classifications, standards and systems for Employment Services, the remainder of the CEIC/D, and the private and public sectors of the labour market.

Canadian Classification and Dictionary of Occupations: The CCDO is a systematic and comprehensive arrangement of occupational definitions which describe the work performed in all Canadian occupations.

The basis of any job-worker matching system should be the ability to accurately describe the endless variations and nuances that exist among jobs and workers. Whatever its strengths as a dictionary of occupations, the CCDO remains ill-equipped to be used in this capacity.

The problems associated with the CCDO - the limitations of its structure, the multiple purposes it must serve, the need to update it - have resulted in the development by NOACS of a new concept in occupational classification. The proposed new National Occupational Classification (NOC) and JOBSCAN are two separate but related and compatible systems being designed to improve on the weaknesses of the CCDO and to assist CEIC/D in the delivery of its mandate in several key areas. In contrast to the CCDO, which tries to be all things to all people, the NOC and JOBSCAN will have purposes and functions that are specifically tailored to their individual users.

The National Occupational Classification (NOC): The NOC will be a new classification system designed to meet the needs of labour market analysis, including the Canadian Occupational Projection System (see page 2-11) and the census. To accurately measure, analyse and project the labour market, an occupational classification system should group occupations in the way that is most conducive to deriving meaningful information. The NOC will reflect the nature of work and industrial structures as they exist in Canada.

The development of the new NOC will necessitate contracting of major job analysis projects beginning in fiscal year 1985-86 and ending 30 months later. Final development of the classification system by NOACS will then follow, with an anticipated completion date of September, 1988.

JOBSCAN: JOBSCAN is a data base composed of worker skills and employer requirements developed to improve the process of labour exchange. It forms the basis of a computer-assisted job-worker matching system. JOBSCAN will also have applications for areas such as training, insurance and immigration.

Unlike the current unsystematic method of matching workers to jobs using only token CCDO codes and often ambiguous or restrictive job titles, JOBSCAN matches on the basis of significant job factors. Jobs or groups of jobs are researched to determine the factors that are significant for placement in each group. These factors are then organized into checklists - the instruments by which job orders are taken from employers and information obtained from workers concerning their abilities and aspirations. Thus, the checklists form the framework upon which individual job and worker information can be gathered to form the JOBSCAN data base. The next steps in the development of JOBSCAN are an automated test of the checklists and a pilot study followed by full implementation.

NOC/JOBSCAN resource requirements are estimated at 32 person years and $1,684,135 for operation and maintenance expenditures during 1985-86.

Insurance Benefit Services

Improved Administration of the Unemployment Insurance Act (see pages 3-66 to 3-74): The 1985-86 year will see the consolidation of improvements commenced over the past three years.

On-line computer services will be fully implemented nationally in 1985-86 and are expected to reduce the over-all incidence of delay in service to the public. In addition, this automated system enhances management's ability to control the work flow.

CEIC/D's Comprehensive Longer Term Plan, now referred to as the UI Blueprint, is being implemented for improved management of the UI Program and development of its infrastructure. As a continuation of this plan, CEIC/D intends to implement the following components during 1985-86: a resourcing mechanism/formula; improved work instruments and training packages; a standard comprehensive national operating policy for claims processing; and a process for analyzing national operational training needs.

The UI Blueprint on the delivery of UI was established by CEIC/D in 1984-85 to encompass not only the Comprehensive Longer Term Plan initiatives but the initiatives pertaining to the accurate, timely, understandable and sensitive delivery of UI benefit payments as well.

The emphasis for the 1984-85 insurance operation involved developing initiatives that would impact upon improving the accuracy of benefit payments as well the effectiveness of the UI Program. This emphasis will shift to improving the timeliness of benefit payments and sensitivity towards claimants for the 1985-86 fiscal period.

3. Update on Previously Reported Initiatives

Employment Training: A number of measures were taken in 1984-85 to more effectively enable women to enter training, for example, expanding the definition of non-traditional occupations so that employers receive a higher subsidy for training women in more occupations, and increasing by 50 per cent the number of part-time courses purchased.

One of the initiatives identified in 1983-84 was to expand industry's capacity to produce 10,000 highly skilled workers a year by 1986-87. A total of 12,500 trainees commenced training in 1983-84 under Critical Trade Skills Training (CTST), thereby achieving the target established for this program. The forecast for 1984-85 was 15,000 and for 1985-86 is 13,500 trainees. The decrease in the number of trainees results from the higher cost per trainee due to inflation and a gradual move toward more costly training in high technology occupations. The Training Program contributes to alleviating training bottlenecks by redirecting training towards occupations in demand and by giving priority to occupations of national importance.

In 1984-85 the process of designating occupations of national importance was refined to focus more closely on potential skill shortages in the labour market so that training actions could be better directed to those occupations in demand.

Direct Job Creation: Subsequent to the consolidation of previous programs in September 1983, substantial injections of funds into new programming were directed by the Government. By the end of the fiscal year the budget for all programs had increased to $1.24 billion.

The consolidation and rationalization of job creation programs placed a considerable administrative burden on CEIC/D to implement new programming late in the fiscal year. The situation demanded an intense effort in the following areas:

- organizational restructuring,
- hiring and training of staff,
- development of work instruments and information systems,
- mounting advertising campaigns, and
- establishing operational indicators.

While the effectiveness of job creation programs also increased substantially over the period, the injection of substantial funds late in the year resulted in late take up, and a higher than normal lapsing of funds occurred.

On the whole however, job creation programs had a tremendous impact on the labour market and resulted in the creation of over four million work-weeks of employment for unemployed Canadians.

Affirmative Action: During 1983-84, 29 companies signed affirmative action letters of agreement with the CEIC/D, bringing the total signed to 66. Twenty-two of the 66 agreements were under the Federal Contracts Program and six of the 66 were national agreements signed with companies operating in more than one province.

National Employment Services

Employment Services: Plans were made to link key cities in the Prairies, currently using the Metropolitan Order Processing System (MOPS), with the National Job Bank (NJB). This will allow employment counsellors to gain access to information on hard-to-fill jobs across Canada using MOPS terminals at their desks. During 1983-84 plans were advanced for the National Employment Service System (NESS) which will ultimately link most CECs, the NJB and other planned computerized information systems into one comprehensive national system.

The ability of CECs to intervene in a meaningful way was examined through the Revitalization Program (see page 3-28).

The initial emphasis was to construct a suitable planning framework. This involved a reconceptualization of Employment Services, beginning with an intensive study and definition of its role, and terminating with a framework for the description of CEC operations. Current operational practices were then examined to identify opportunities for change. These studies consist of 50 projects, addressing all aspects of Employment Service's management and operations.

They have resulted in many recommendations that have been approved in principle, some for early implementation and some for verification through testing by users.

Measures were undertaken during 1983-84 to improve the ability of CECs to better address the needs of those clients having difficulty in securing and retaining productive employment. These measures included the following:

- the implementation of a comprehensive Counsellor Training Program; delivery of Modules I and VII of the Competency-Based Training Program in both languages as well as a pilot course of Module I was completed during 1983-84;

- the introduction of specialized service units in selected offices; an experimental Native Urban Reception Centre (URC) was opened in the Regina, Saskatchewan Native Friendship Centre; the purpose of the URC was to act as a service module

by which native newcomers to urban centres could gain direct access to full employment service within their own environment; also, by the end of the year, a total of 11 specialized Youth Units and nine Women's Employment Counselling Centres were in place and operating in strategic locales all across Canada; and

- the development of instruments to measure the effectiveness of this intervention; significant progress has been made in the development of performance indicators for measuring service to target groups, (i.e. women, youth, natives and disabled persons), and those with severe employment disadvantages; the first set of such indicators is being implemented in 1984-85; work continues in the development and refinement of more broadly-based measurement systems, as well as on monitoring projects designed to assess and weigh the benefits of operational agreements and innovations.

Youth: During 1983-84, the assistance provided to unemployed or underemployed youth was increased considerably by CEIC/D. Total assistance to youth increased from an estimated $853 million in 1982-83 to $1.113 billion during 1983-84. The number of youth participants increased from an estimated 2,072,000 in 1982-83 to 2,146,600 in 1983-84.

Two additional Specialized Youth Units were opened in 1983-84 bringing the number of such units to 11. The units serve young people (aged 15-19) requiring special assistance because of economic and social disadvantage to enter into productive employment.

Some 450 Canada Employment Centres for Students operated between April and September 1983, and were staffed by approximately 1,500 senior students and recent post-secondary graduates. The Centres registered 556,000 students for summer employment. More than 333,000 temporary and casual placements were made, mostly in the private sector. This represented a 23 percent increase from the previous year.

Insurance Benefit Services

Improved Administration of the Unemployment Insurance Act (see pages 3-66 to 3-74): A national initiative was undertaken to offer employers assistance in the completion of Records of Employment. Employer reaction has been positive.

Quality control policy, procedures and work instruments were revised, resulting in an increased effectiveness in detecting and correcting claim processing errors.

The Comprehensive Tracking System has been fully implemented and is providing valuable information related to claim processing errors, which has led to the initiation of corrective intervention.

4. Program Effectiveness

The over-all impact and effectiveness of the Employment and Insurance Program are measured by the social and economic effects of the various program elements, and it is difficult to view these effects independently. The entry and integration of individuals into the labour market contribute to both social stability and economic growth, while the provision of temporary income support within national social security provisions mitigates both economic and social problems pending this integration.

The effectiveness of the CECs in the provision of employment services is gauged primarily through the use of the cancellation rate, the number of referrals required to effect a placement, and the ratio of employer-listed vacancies to vacancies filled (vacancy fill rate). The latter indicator is a good measure of how successfully CEIC/D matches workers and jobs. Work is continuing on the development of indicators related to two other major functions: attracting employers to use the service of the CEC, and the effect of counselling on increasing the individual's employability. Experience with programs such as Creative Job Search Techniques and the Job Finding Club indicates that some clients obtain jobs which have never been registered with a CEC. Therefore, current measures of effectiveness tend to underestimate the actual placement rate achieved through CEC programs. Details are provided on page 3-59.

The CECs for Students provide a summer placement service for students seeking short-term employment and for employers requiring temporary help. Program effectiveness is measured by comparing changes year to year in the number of placements recorded. Details are provided on page 3-54.

The Canada Manpower Mobility Program is administered through the CECs and its over-all effect is gauged by the number of unemployed people who become employed as a direct result of receiving financial assistance to help them move. Details are provided on page 3-64 and 3-65.

Where the services of the CEC cannot be used effectively, funds are provided to community-based organizations through contracts for service. Services financed in this way include Outreach. A primary effectiveness indicator is the number of Outreach placements. See page 3-63 for details.

CEIC/D contributes to economic stability and human resource development through job creation programs which aid in the formation of various community-based and private-sector development projects. These can be both short-term and longer-term and are directed to alleviating the effects of unemployment or to the improvement of participant employability. The effectiveness of these programs is gauged among other factors, by the number of work-weeks contracted and training weeks provided (YTO). See page 3-54 for more details.

Through the National Training Program, CEIC/D assists the labour force by providing occupational training to better meet the need for skills created by a changing economy, and to increase the earning and employment potential of individual workers. Indicators of effectiveness include: post-training employment statistics, proportion of training for occupations of national importance, trainees in industrial higher-skill occupations, number of workers completing training, the course utilization rate, and number of target group trainees. See pages 3-44 and 3-45 for more details.

Insurance Benefit Services are provided through the network of CECs, supported by five regional computer centres. While claims-processing and adjudication enquiries, distribution of records of employment, and control activities are located in the CECs, the majority of benefit payments are issued by the regional computer centres. Board of Referee appeals are heard at selected CECs. Program effectiveness is measured by the timeliness and accuracy of processing the claim and making payment and by the effectiveness of the control activity. See pages 3-70 to 3-74 for details.

The refinement and promulgation of improved procedures and policies for determination of entitlement to unemployment insurance is continuing. Numerous control programs ensure that only those workers eligible under the Unemployment Insurance Act receive benefits. Insurance agents regularly disqualify claimants who fail to meet eligibility criteria. One indicator used to measure the effectiveness of controlling unwarranted payments is a comparison of the number of claimants denied benefits to the disqualifications subsequently overturned through the appeal process.

In addition to the program effectiveness indicators identified above, CEIC/D has undertaken a number of program evaluation studies designed to identify the strengths and weaknesses of its programs. A number of these evaluation studies have reviewed aspects of CEIC/D's placement activity. These studies have identified areas where clients believe the services are adequate and others in need of improvement. The reports found that the CEC placement service provided fast referrals to its employer clients. The services' placement activity, however, has failed to keep pace with the growth of the labour market, though it remains an important supply channel. The service still remains cost-effective. These findings will contribute to CEIC/D's current initiatives directed to revitalizing Employment Services.

Similarly, a major evaluation was completed on the work sharing program which is funded by unemployment insurance. The report indicated strong support for the program among participants; that some workers were able to avoid lay-offs; and that the program was more costly to the Unemployment Insurance account than the regular Unemployment Insurance program.

Reports have also been completed on a number of earlier job creation activities. These reports have examined the differing impacts of a range of programs on a variety of target groups. In general, programs were found to improve the earnings and/or employability of participants. Some programs were found, however, to be more effective than others depending on the circumstances and nature of the labour market impediments of workers.

Section II
Analysis by Activity

A. Employment Training

Objective

To provide occupational training for the labour force and thereby better meet the need for skills created by a changing economy, and to increase the earning and employment potential of individual workers.

The National Training Program will concentrate on achieving the following targets in 1985-86:

- the provision of institution-based training, particularly for higher-level skills, involving 13.5 million full-time training days purchased, and 147,000 full-time trainee starts; and

- the provision of industrial training, with a concentration on the development of skills in short supply, involving 12,000 General Industrial Training contracts signed and 16,900 trainee starts, and 3,800 Critical Trade Skills Training contracts signed and 7,600 trainee starts.

Resource Summary

	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Institutional Training	877,419	491	888,338	452	(10,919)	39
General Industrial Training	91,961	329	101,426	329	(9,465)	-
Critical Trade Skills Training	51,816	45	127,608	100	(75,792)	(55)
Skills Growth Fund	37,202	10	75,187	4	(37,985)*	6
Management	2,748	70	3,648	80	(900)	(10)
Sub-total	1,061,146	945	1,196,207	965	(135,061)	(20)
Less: Section 39 expenditures	230,616		253,000		(22,384)	
Total	830,530	945	943,207	965	(112,677)	(20)
Less: Recoverable expenditures from the Unemployment Insurance Account	10,648		11,646		(998)	
	819,882	945	931,561	965	(111,679)	(20)

* Most of Skills Growth Fund projects are multi-year and cash flow determination can only be made as agreements are signed and projects are implemented. There were considerable delays in construction start-ups and in equipment deliveries, in 1983-84. Cash-flow projections have been revised accordingly for 1984-85.

Description

The Employment Training activity is operated in partnership with the provinces, territories and industry for the provision of occupational training to the labour force to better meet the need for skills created by a changing economy, and to increase the earning and employment potential of individual workers. The provision of training services is guided by federal-provincial training agreements that set out the roles and responsibilities of the federal and provincial governments. The

program also receives input from federal-provincial joint committees, which assess the training needs in each province and territory and establish plans to meet training requirement priorities.

The activity is composed of the following five sub-activities.

Institutional Training: CEIC/D purchases training courses for adult clients from provincial schools, colleges and technical institutes and from approved private institutions. The major types of training purchased are occupational skill training, classroom training for apprentices, basic training for skill development mainly in preparation for occupational skill training, and language training. In addition, most trainees are eligible for income support such as Unemployment Insurance (UI) or training allowances, and supplemental allowances for dependents, for living away from home, and for commuting and travel allowances.

General Industrial Training: Through the General Industrial Training (GIT) component of Industrial Training, the Commission/Department offers financial and consultative assistance to employers, or groups or associations of employers who initiate or expand a training facility as a means to develop skills beneficial to workers and employers. This assistance is only intended to help in the training of special needs clients. Where an employer or group of employers is not able to arrange training, CEIC/D may enter into an agreement with any person or agency which, in its opinion, is able to do so. Employers may receive assistance for a portion of the costs of approved training, including trainees' wages and other direct training costs, according to program guidelines. Training under the GIT component may be approved for up to 52 weeks.

Critical Trade Skills Training: Through the Critical Trade Skills Training (CTST) component of Industrial Training, efforts are concentrated on training in selected highly skilled trades/occupations, such as tool and die makers and machinists, for which there is a constant supply shortage on the labour market; for which Canadian training capacity is substantially underdeveloped; and where the demand is mostly filled from foreign sources. Training in this regard may last up to four years or longer and CEIC/D provides financial aid for up to 104 weeks.

Skills Growth Fund: The Skills Growth Fund (SGF) stimulates the expansion and modernization of training facilities required to overcome present and anticipated shortages of workers in occupations of national importance, and to provide appropriate training for members of special target groups in order to enhance their employment opportunities. Under SGF, CEIC/D provides financial assistance to provinces or non-profit organizations established to provide training. The assistance is for a portion or all of the costs relating to the establishment, expansion, conversion, modernization and, where appropriate, initial operation of technical and vocational training facilities and equipment.

Management: This sub-activity includes the functions of personnel at national and regional headquarters responsible for analysing program data, examining and evaluating programs, and developing policies for the effective delivery of the National Training Program.

Performance Information/Resource Justification

The National Training Act provides for the basic program components: Institutional Training, Industrial Training, and the Skills Growth Fund. Purchases of Institutional Training courses are mainly for occupational skill training with emphasis on occupations of national importance, classroom training for apprentices, basic training for skill development primarily in preparation for occupational skill training. Industrial Training is intended to expand industry's capacity to produce skilled workers particularly through Critical Trade Skills Training which is restricted to occupations of national importance. The Skills Growth Fund provides financial assistance for a portion or all of the costs relating to the establishment, expansion, conversion, modernization and, where appropriate, initial operation of technical and vocational training facilities and equipment. The Skills Growth Fund can also assist the development and adaptation of facilities for persons with special training needs.

Institutional Training: Resource requirements for 1985-86 show a decrease for Institutional Training in the expectation that low-skill training in surplus occupations will be very much reduced. Resource requirements and related performance factors are shown in Figure 8.

Figure 8: Institutional Training Statistics

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Program Funds ($000)			
Purchase of training from provinces	511,080	525,266	516,016
Training allowances	86,000	107,820	103,750
Unemployment insurance benefits	275,000	259,000	230,616
Trainee travel	10,815	11,817	12,065
Total	882,895	903,903	862,447
Training Days, Utilization, Trainee Starts			
Full-time training days purchased (million)	13.5	14.4	14.6
Utilization rate (%)	90.0	90.0	88.6
Full-time trainee starts (000)	147.0	158.6	163.0
Part-time trainee starts (000)	80.0	70.0	68.0
Units costs: program funds per trainee start ($000) (full-time only)	6.0	5.7	5.3
Trainee completions and employability			
Training completion rate (%)	86.0	85.5	82.8
Proportion of skill trainees in training for occupations of national importance (%)	27.0	30.0	33.6
Post-training employment rate (%)*	62.0	60.0	53.1

Natives (%)	6.2	6.2	6.2
Disabled (%)	0.4	0.3	0.3

* Data from the trainee follow-up survey showing the employment status of skill course trainees three months after course completion.

Industrial Training (encompassing General Industrial Training and Critical Trade Skills Training): Figure 9 identifies the main factors on which resource requirements are based.

In the case of General Industrial Training, unit costs per trainee start increased in the years 1983-84 and 1984-85 relative to 1982-83, due mainly to a shift to more costly higher-skill training and the restriction of training for special needs clientele in 1985-86.

The data for Critical Trade Skills Training indicates a variability from year to year. Part of the variability can be attributed to changes in policy as to the proportion of costs reimbursed to employers. A second factor relates to the carry-over impact of second-year trainees. Support for trainees can extend up to two years.

Figure 9: Industrial Training Statistics

B. Direct Job Creation

Objective

To create additional opportunities for unemployed workers during periods of economic downturn and labour market dislocation, increase long-term employment opportunities in communities where chronic high unemployment is a persistent problem, and develop and enhance the labour market viability of disadvantaged, disabled or inexperienced persons who would otherwise not participate effectively in the labour market.

Within this objective, specific targets for 1985-86 are:

- the creation of 779,173 work-weeks of employment supportive of contra-cyclical stabilization and developmental objectives (Canada Works);
- the creation of 122,539 work-weeks of employment and the establishment of 119 corporations in support of local employment growth (LEAD);
- the creation of 610,311 work-weeks of employment supportive of human resource development (Job Corps and Career Access); and
- the provision of 90,000 training-weeks for 3,000 trainees in support of human resource development (Youth Training Option).

Resource Summary

Direct Job Creation accounts for approximately 22.2 per cent of 1985-86 program expenditures (excluding UI and Fishermen's contributions) and 5.6 per cent of the total person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Less: Section 38 expenditures	60,000	-	247,000	-	93,769	-
Total[2]	426,671	1,010	1,087,802	2,704	907,791	2,558

1. The 1984-85 figures for Canada Works and Career Access include $187 million and $60 million respectively in estimated fiscal year UI expenditures which are chargeable to the Unemployment Insurance Account under the authority of Section 38 of the Unemployment Insurance Act.

2. The 1984-85 figures also include summer student employment program resources. Specifically, the Canada Works figures include $138.731 million and 356 person-years associated with Summer Canada Works. The Career Access figures include $17.492 million in funding and 36 person-years associated with Summer Career Access.

3. The 1983-84 figure for Canada Works includes $93.769 million in fiscal year UI expenditures which are chargeable to the Unemployment Insurance Account under the authority of Section 38 of the Unemployment Insurance Act.

4. The 1985-86 figures for Career Access include $16.448 million and 38 person-years for the Youth Training Option. The 1984-85 figures for Career Access contain $49.88 million and 98 person-years that were initially designated for the First Chance Program. Following the termination of this program $9.476 million and 83.44 person-years were redeployed as a source of funding for the Youth Training Option and Canada Works (Round II) Programs.

Figure 12: Expenditures by Object ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	%	$	%	$	%
Operating and Capital[1]						
Personnel	35,066	8.2	75,927	7.0	74,456	8.2
Other O&M	9,451	2.2	27,190	2.5	23,122	2.5

Total	907,791	2,558	583,618	1,192	324,173	1,366

1. For administrative purposes in 1983-84 only, all program funds associated with the subsumed Canada Community Development Projects under LEAD ($61.422 million) and Summer Canada ($98.151 million and 339 person-years) are displayed in Public Accounts under Canada Works.

2. These amounts are included under Canada Works.

3. The Main Estimates figures exclude $127.992 million and 1,024 person-years associated with the Summer Student employment initiatives. Their resources were approved under Treasury Board Vote 10 - Main Estimates and subsequently transferred to CEIC/D prior to the start of the fiscal year.

Description

The functions performed by CEIC/D staff under Direct Job Creation programs include:

- management, analysis, design and operational support;
- efforts to solicit applications or submissions;
- review, assessment, consultation, priorization and recommendation/approval of applications or submissions;
- contracting, reviewing monthly reports, and authorizing payments;
- monitoring compliance with agreements; and
- close-out activities.

Job creation programs were consolidated in September 1983 to support three labour market objectives:

- contra-cyclical stabilization and adjustment;
- local employment growth; and
- human resource development.

Contra-Cyclical Stabilization and Adjustment: The objective is to create incremental, productive term employment for unemployed persons during periods of economic downturn and labour market dislocations in harmony with community priorities and broader federal and regional goals for economic and employment growth. The Canada Works Program supports this objective.

Canada Works: The objective of the Canada Works Program is to create incremental, productive term employment for unemployed persons. In collaboration with the private sector, as well as with a broad range of public and community-based employers, immediate employment will be created during periods of economic downturn and labour market dislocation such as plant shut-downs.

The activities supported will, as appropriate, reflect community priorities and the broader federal and regional objectives of economic recovery and employment growth. For supplementary information on Canada Works, see page 3-85.

Local Employment Growth: This second objective of direct job creation is to increase long-term community-based employment development in areas where chronic high unemployment persists even under normal labour market conditions or regardless of economic cycles. The Local Employment Assistance and Development (LEAD) Program supports this objective.

Local Employment Assistance and Development (LEAD): The objective of the LEAD Program is to increase the number of permanent jobs in localities of chronically high unemployment. It will accomplish this by enabling community representative organizations to

plan and carry out employment development activities, at an increasing level of productivity, in a manner which relates to the community's longer-term objectives and capabilities.

The LEAD Program will provide support to a community-based process of employment creation in and through projects and/or LEAD corporations leading to permanent employment growth, carried out in harmony with regional development strategies. For supplementary information on LEAD, see page 3-86.

Human Resource Development: This third objective is to develop and enhance the labour market readiness of disadvantaged, disabled or inexperienced persons who would otherwise not participate effectively in the labour market. This objective is supported through the Job Corps, Career Access and the Youth Training Option Programs.

Job Corps: The objective of the Job Corps Program is to provide people who are severely employment disadvantaged with the necessary preparation and employment related skills leading to labour market readiness. The program will provide contribution funding to organizations, individuals or businesses that are able to establish projects that will prepare severely disadvantaged people for integration into the labour force.

Community and private sector resources establish and execute projects offering participants a mixture of counselling, work orientation, employment and supportive remedial assistance. A major focus of the program, and the focus of the incremental funding, will be on youth and on the development and support of youth. For supplementary information on Job Corps, see page 3-87.

Career Access: The objective of the Career Access Program is to stimulate the provision of employment opportunities for people whose participation in the labour market may be facilitated or enhanced by such measures. The program will assist people who are experiencing difficulty in entering, re-entering or staying in employment by providing wage subsidies and other ancillary costs to employers who hire them.

In this way, the program will provide opportunities for individuals facing severe employment barriers to overcome these barriers. For supplementary information on Career Access, see pages 3-86.

Youth Training Option: The objective of the program is to provide young people with a foundation of training and practical experience that will facilitate their transition from school to work, enable them to perform effectively in the labour market, and serve as a basis for further training throughout their adult lives. Participants must be unemployed, likely to fall within the 17-21 age group, and

require the training and work experience that employers demand in an increasingly technological society. For supplementary information on the Youth Training Option, see page 3-88.

Other Employment Measures: Finally, the following measures also help to support the over-all objectives of the job creation programs.

CECs for Students and Native Internship Program: CECs for Students provide a placement service for students seeking summer employment and employers requiring temporary summer help. The purpose of the Native Internship Program is to increase summer employment opportunities for native students. The program is offered through various facets of CEIC/D, including the CECs for Students offices. The Native Internship Program, where possible, directly complements the participants' career and vocational aspirations. For supplementary information, see page 3-88.

Employment Creation Grants and Contributions: This is part of the federal government's Special Employment Initiative. Through Employment Creation grants and contributions, CEIC/D administers projects submitted under the Special Employment Initiative which do not fit with regular programs or legislative authorities of other departments.

Performance Information/Resource Justification

The measure chosen to express the results achieved by Direct Job Creation is the number of work-weeks of employment contracted during the fiscal year, with the exception of LEAD corporations. For LEAD corporations, the number of corporations operating during the fiscal year is used as a measure of results achieved. Performance information/ resource justification refers only to those areas and items identified in Figure 14. No indicator is given for Employment Creation.

Figure 14: Work-Weeks of Employment Contracted

1. The 1985-86 contribution amount excludes $14.746 million for the Youth Training Option. The 1984-85 forecast figure excludes $45.543 million associated with the First Chance and Youth Training Option.

2. Not available. The 1985-86 resources were not approved when this document was in preparation.

3. The figures include Section 39 funding of $1.3 million for 1985-86 and $0.2 million for 1984-85.

C. National Employment Services

Objective

To develop and apply a framework of policies and programs necessary for the efficient functioning of the Canadian labour market which is consistent with national economic and social goals. Meeting this goal requires promoting:

- a labour force that meets national occupational requirements;
- an economy capable of growth and adaptation without undue burden being placed on individuals, groups or regions; and
- equality of opportunity to compete for and have access to jobs.

Resource Summary

The National Employment Services account for approximately 12.4 per cent of total program expenditures (excluding UI and Fishermen's contributions) and 27.5 per cent of the total person-years.

	43,266	5,056	37,943	5,089	5,323	(33)

* This lapse is due to a lower level of utilization of the Work Sharing Program by employers resulting in a reduction in Section 37 expenditures from the Unemployment Insurance Account.

Description

National Employment Services consists of the following seven sub-activities.

Employment Services: This sub-activity provides programs and services through a national network of CECs to employer and employee clients in an effort to achieve an efficient functioning of the Canadian labour market consistent with national economic and social goals. Programs and services are related to placement, counselling, registration, and employer-market development.

Industrial Adjustment Service: The purpose of this sub-activity is to encourage employers and their employees to work together to solve employment problems through joint adjustment committees. In addition, staff involved in this sub-activity are responsible for negotiating work sharing agreements under the Work Sharing Program and managing the Modified Industry and Labour Adjustment Program (MILAP) and its Community Adjustment Committees. (MILAP is the successor to the previous Industry and Labour Adjustment Program - ILAP.)

Agriculture: The purpose of this sub-activity is to achieve optimum use of Canadian labour resources in the agricultural industry. The mechanisms used to achieve this are federal-provincial Agricultural Employment Development agreements, and Canada Farm Labour Pools.

Outreach: The purpose of this sub-activity is to provide employment-related services to designated target groups where CEC services cannot be used effectively. These target groups include individuals whose difficulties in obtaining, regaining or retaining suitable employment are compounded by personal or systemic barriers stemming from ethnic, social, cultural, physical, geographical or other forms of isolation. Funds are provided through contracts for service to community-based organizations which make employment services available to the target groups.

Canada Mobility Program: This sub-activity provides financial assistance to encourage and facilitate the mobility of workers who are unemployed, underemployed or about to become unemployed, and who are unable to secure work locally.

Cooperative Education: The purpose of this sub-activity is to stimulate the provision of developmental work/study experience for secondary and post-secondary students. Contribution funds are provided to participating educational authorities to cover a portion of the salary costs and associated operational expenditures of coordinators who develop and implement new or expanded cooperative education projects.

Labour Market Planning and Adjustment: This function includes the management responsibility for the development of policies, programs and activities, such as Human Resource Planning Boards, Business Management Development and Options North, designed to optimize the use and development of the Canadian labour force, and/or policy and coordination activities in support of the Modified Industry and Labour Adjustment Program (MILAP) and the Canadian Industrial Renewal Program (CIRP).

Performance Information/Resource Justification

Employment Services: The priority of Employment Services is to help employers in private and public sectors find suitable workers and to help job seekers find work. CEIC/D operates 454 CECs as well as 239 itinerant points of service in isolated or remote communities. In

addition, service is provided at 111 post-secondary institutions, nine Casual Labour Offices, 11 specialized Youth Units, nine Women's Counselling Centres and 49 employment development sub-offices with 10 regional offices. During the summer, these offices are further augmented by approximately 450 CECs for Students. CECs provide a screening and referral service. Job seekers are instructed in the development of job-search plans and are provided with leads to employment opportunities. Employment counsellors may also take action to interest prospective employers in job-seeking clients.

Figure 18 provides quantitative information related to the output data currently collected for Employment Services.

To cope with the continuing demands for restraint and increasing demands for services to target groups, it is expected that a reduction in registrations and revivals will occur in 1985-86 as a result of a change to the client registration policy and increased reliance on self-service techniques. This will permit more effort to be directed towards the provision of assistance to employee-clients who encounter employment barriers and to members of those target groups identified as Government priorities. Emphasis on target groups and special needs clients entails a greater amount of effort and resources to achieve the same results.

A reduction in the number of counselling interviews is also expected over time because of a greater emphasis on client self-help. At the same time, a higher quality of counselling interviews will be achieved because of the implementation of the Competency-Based Training Program (CBTP) and the continuing development of the information system on the Individual Assistance Services (IAS). The CBTP will equip counsellors with more specialized knowledge and skill in order to improve the quality of employment counselling. The IAS will, among other things, provide managers at all levels with data on which to make more informed decisions aimed at improving the quality and effectiveness of employment counselling services.

As well, the increased use of counselling tools, programs and services should also contribute to the higher quality counselling that will improve services provided to employee clients. In addition, the establishment of Job Finding Clubs in CECs, voluntary groups and Outreach projects will be promoted and training provided. Clubs have been successful in helping an average of 80 per cent of their members to find jobs within three weeks, and studies have shown that these clients tend to stay employed.

Figure 18: Employment Services Output

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Female placements	249,726	247,888	242,582
Person-years	4,747	4,748	4,649

1. excludes visits made by employers to CECs.

2. SNC - special needs clients.

The information shown in Figure 18 is not a complete reflection of the services provided by CECs. Work is currently under way, as part of a revitalization of Employment Services to provide additional performance indicators which will, for example, measure the impact of labour market information, human resource development initiatives, and services provided to special needs clients (SNCs) (a heterogeneous group who encounter personal/individualized problems which adversely affect their employability). The development of a data base and adequate performance indicators for these clients poses particular difficulties associated with the fact that, unlike target group members, they cannot identify themselves as SNCs at the time of registration and thus the collection of relevant output data is very difficult. Attempts are continuing however, to develop reliable performance measures.

Industrial Adjustment Service (IAS): This program is designed to help workers adjust to and take advantage of economic, technological and other changes in a particular company, industry or community. In 1985-86, CEIC/D expects to enter into 318 agreements including employer/employee adjustment committees designed to solve identified

human resource problems, mobility assessment agreements and the MILAP Community Adjustment Committees. The financial costs for these agreements are consolidated in Figure 19. The figures in the following table include ILAP/MILAP funds ($1.2 million for 1985-86, $3.592 million for 1984-85, and $0.249 million for 1983-84).

Figure 19: Industrial Adjustment Service

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Industrial Adjustment Service			
Number of new agreements	318	454	558
Contributions ($)	4,750	11,442	6,766

Work Sharing: In 1985-86, provided Cabinet approves program extension and associated resources, CEIC/D expects to enter into 3,789 Work Sharing agreements designed to avoid lay-offs through the use of alternative income support, using UI benefit payments for a maximum of 26 weeks in temporary lay-off situations and up to 50 weeks in cases of permanent lay-offs. For example, a firm facing a 20 per cent reduction in production would normally plan to lay off one-fifth of its work force. Through work sharing the company could employ its total work force on a four-day per week basis. The reduction from 40 hours to 32 hours a week would cut production by the required 20 per cent without reducing the number of employees. The company would pay its employees for the hours they worked while UI benefits would be paid for the day the workers were not working.

Figure 20 provides quantitative data related to Work Sharing agreements.

Figure 20: Work Sharing Agreements

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Work Sharing			
Number of agreements approved	3,789	3,850	5,074
Lay-offs averted	23,393	23,100	25,703
Benefits paid ($)	35,000	30,900	55,493

Agriculture: This program is designed to maximize the use of Canadian labour for the agricultural industry. There are federal-provincial Agricultural Employment Development agreements with eight provinces to promote federal-provincial consultation and cooperation in

the development of policies and initiatives, and to provide a means for sharing equally the cost of implementing agricultural employment measures such as housing, research and promotion.

CEIC/D also expects to fund 66 Canada Farm Labour Pools to provide a specialized employment referral service to local agricultural communities.

Figure 21: Agriculture Program

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Federal-provincial			
Agricultural Employment			
Development agreements			
Number of agreements	8	8	7
Contributions ($)	1,012	1,012	1,093
Canada Farm Labour Pools

Contributions ($)	5,994	5,994	5,231
Placements & transfers-in	203,500	176,000	215,406

Outreach Services: This delivery method involves the provision of funds to community-based organizations for the extension of employment-related services such as identifying and assessing the need for remedial services, job placement, and marketing and follow-up support to designated target groups where CEC services cannot be used effectively. These target groups include individuals whose difficulties in obtaining, regaining or retaining suitable employment are compounded by personal or systemic barriers stemming from ethnic, social, cultural, physical, geographical or other forms of isolation. Among the desired results are the indirect placement of clients in jobs found by themselves as a result of project activity, and direct client placement made through employer, CEC and community contact by project staff.

Figure 22: Outreach Placements

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Number of placements	70,000	69,000	68,422
Payments to organizations ($)	23,120,000	20,472,000	18,571,686

Canada Mobility Program: This program encourages the mobility of workers who are unemployed, underemployed or about to become unemployed, for whom work is not available locally, and who wish to seek or move to employment in the nearest appropriate locality. The program provides five general categories of financial assistance:

- exploratory assistance which encourages workers to seek employment in the nearest areas where suitable work is available;
- relocation assistance which encourages the employee-client to relocate with family members to the nearest area where suitable employment has been found;
- temporary employment assistance which assists workers in one area to travel to another area in order to accept employment of six weeks to nine months duration;
- special travel assistance which assists workers to travel to obtain employment services that are not available locally; and
- seasonal agriculture assistance which enables a worker to travel to employment of up to nine months duration.

Figure 23 provides quantitative data related to the Mobility Program.

Figure 23: Mobility Program Expenditures

	Estimates 1985-1986	Forecast 1984-1985	Actual 1983-1984
Exploratory assistance			
No. of assistances	4,800	4,800	4,708
Contributions ($000)	1,980	1,982	1,418
Relocation assistance			
No. of assistances	6,000	9,000	8,272
Contributions ($000)	5,599	8,397	6,121
Temporary employment			
No. of assistances	2,400	1,100	1,529
Contributions ($000)	436	201	242
Special travel			
No. of assistances	2,400	1,300	1,447
Contributions ($000)	134	72	99
Seasonal agriculture			
No. of assistances	25,000	36,800	24,198
Contributions ($000)	2,181	2,534	2,015

It is estimated that the number of instances where relocation assistance is provided will decrease to 6,000 from the forecast of 9,000 for 1984-85 as a result of tightening relocation criteria. The difference in seasonal agriculture assistance is due to a revised method of counting.

D. Insurance Benefit Services

Objective

To provide temporary income support to unemployed workers while they seek employment or while unable to work because of sickness, disability pregnancy or adoption.

Within this objective, specific sub-objectives include the following national goals:

- to rapidly and accurately process enquiries and determine entitlement to benefit, with respect to applications to establish a benefit period, claims filed while a benefit period is in existence, and appeals;
- to process claimants' reports and make payments to individuals in an accurate and timely manner;
- to prevent, deter and detect abuse or fraud; and
- to provide for the collection of premiums payable to the Unemployment Insurance Account by Revenue Canada (Taxation) and to process applications for premium reduction in an accurate and timely manner.

Resource Summary

Expenditures for the Insurance Benefit activity (excluding Government contributions to the UI Account and Fishermen's Benefits) will account for approximately 16.4 per cent of the 1985-86 operating budget for Employment and Insurance. Personnel costs account for 77.4 per cent of the operating costs for the Insurance Benefit activity.

Description

The Insurance Benefits activity consists of the following five sub-activities: the processing, control, and management of insurance benefit payments and the funding for the government's contributions to the Unemployment Insurance Account and in respect of Fishermen's Benefits.

Processing: This includes the responsibility for efficient and timely determination of an individual's entitlement to receipt of unemployment insurance benefits, the payment of such benefits to eligible individuals, the maintenance of data processing facilities necessary to produce benefit payments and process management data for CEIC/D. Interviews of claimants to ensure that they are actively seeking employment and otherwise continue to be eligible for the receipt of benefits are also included as is the answering of enquiries from claimants and the general public related to individual claims or the program in general.

Control: This function includes the responsibility for detecting, and as a consequence, deterring fraud and abuse, and for ensuring the timely and orderly issuance of correct information by employers and claimants. It also includes preventative activities carried out in both the control and the processing sub-activities.

Management: The management function is responsible for the maintenance of the legislative base for the UI Program and the development of the appropriate policies and procedures for the administration of the program. This also includes costs related to the collection of premiums payable to the Unemployment Insurance Account by Revenue Canada (Taxation) and the provision of premium reductions to qualified employers.

Government Contribution to the Unemployment Insurance Account: The Unemployment Insurance Act requires that an amount equal to the "Government cost of paying benefit" be credited to the Unemployment Insurance Account. The "Government cost of paying benefit" includes regionally extended benefits and extension benefits paid pursuant to Job Creation projects (Section 38) and Training Programs (Section 39).

Government Contribution in respect of Fishermen's Benefits: The government contributes to the Unemployment Insurance Account an amount equal to the net difference between premiums collected from fishermen and the UI benefits provided.

Performance Information/Resource Justification

This activity involves two major functions: the processing of claims for unemployment insurance and the issue of warrants by the regional computer centres. This accounts for 86 per cent of the total operating expenditures for Insurance Benefit Services.

Development of the UI resourcing formula (or algorithm) commenced in April 1984. Completion of Phase I (development of a national formula) was achieved in mid-September 1984.

Further work on the formula is taking place throughout 1984-85, comprising not only the testing of the formula at the regional (data) level to determine its value for standardizing internal human resource allocations, but also to test for refinement and enhancement of the model to improve its strength and accuracy as a predictor of resource requirements.

By 1985-86 the formula is expected to be used to support CEIC/D's submissions for supplementary resourcing resulting from unforeseen increases in work load.

Utilization of the formula will entail annual maintenance of the model, encompassing the addition of current performance data and experience-testing of the model.

Figure 27: Work Load and Average Unit Costs

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Volume	$	Volume	$	Volume	$
Processing

Management						
Number of employers registered (revenue collection)	1,035,000	27.90	1,035,000	26.71	974,000	25.25
Number of premium reduction applications processed	36,500	50.99	36,000	49.25	34,700	60.19

Figure 28 relates total work load to total person-years, which are expressed in terms of output per person-year. Figure 29 displays speed of service and quality control indicators.

Processing: Resource levels required for claim processing are determined on the basis of projected work load and the level of service provided to the public. The projected work load for 1985-86 is based on an expected unemployment rate as forecast by the Department of Finance, as well as on the number of applications expected for work sharing, training or special benefits. The level of control activity also determines the resources required for claim processing by affecting the level of in-person contact, the volume of revised claims, appeals to Boards of Referees and appeals to Umpires.

Increased resources devoted to claims processing also result in an over-all reduction in the number of overpayments and underpayments of benefits to individuals. In 1985-86, it is anticipated that the percentage of claims with errors leading to overpayments and underpayments will be reduced, as a result of improvements made to the UI Program.

Improved work processes, a stabilized staff situation, together with the national availability of on-line services, have enabled the forecasting of continued productivity improvement in 1985-86 both in the processing of claims decisions and in the issuing of payments to claimants. Initial and renewal claims adjudicated per person-year are expected to increase by 4 per cent over the previous year. Similarly, a one per cent increase in warrant issue productivity follows a 1984-85 increase which is expected to be approximately eight per cent.

The percentage of initial and renewal claims processed within 28 days in 1985-86 is fixed at 90 per cent. Speed of service objectives in terms of the average number of days to process an initial or renewal claim will be fixed at 21 days in 1985-86. It is also expected that the percentage of initial and renewal claims pending three weeks or more will be kept to an average of 12 per cent nationally.

Resource levels required for the issue of warrants are also based on the expected unemployment rate. The regional computer centres, whose primary responsibility is production of warrants, also play a major role in processing management information and reporting for CEIC/D.

Control: The work load in this sub-activity is concerned with preventing, detecting, and as a consequence, deterring fraudulent or misrepresentative attempts to obtain UI benefits, and the timely and orderly issuance of correct information by employers and claimants.

In 1985-86, it is forecast that approximately 1.1 million investigations will be carried out. The current level of effort in detection of abuse, misuse and fraud will be maintained. A productivity improvement of four per cent, in terms of investigations completed per person-year is expected in 1985-86.

E. Program Administration

Objective

To manage and develop the national benefit, employment, control and service policies, programs and strategies within the Employment and Insurance Program.

Resource Summary

Program Administration represents 7.1 per cent of program expenditures (excluding UI and Fishermen's contributions) and 16.5 per cent of program person-years.

Description

Consistent with the CEIC/D objective of providing a one-stop service to the public, program administration includes the following:

- management, promulgation, coordination, control and delivery of Employment and Insurance programs at the regional, district and local levels; this includes liaising with provincial authorities, other federal departments, community organizations and agencies, and business representatives to ensure coordination and integration of respective policies and activities in the labour market;

- provision of services to members of the general public at Canada Employment Centres (CECs); this includes reception, provision of information, identification of needs and internal referral;

- collection, analysis, synthesis and compiliation of labour market, demographic and statistical data, forecasts and reports; this includes advising national and regional headquarters of developments in the economy and labour market and in the identification of client needs, emerging problems in the delivery of services and suggested solutions;

- development of policies, programs and procedures that ensure consistent and equitable delivery of Employment and Insurance programs and services to the public;

- provision of summer work assignments for student youth in order to augment their academic training and development and to introduce them to a potential career in the Public Service of Canada; and

- provision of operational, administrative, financial and personnel support services to the Employment and Insurance program at the local office level.

Given that the vast majority of Employment and Insurance activities and services are integrated and delivered to the public by the CECs, positions that fall within Program Administration involve either line management, administrative support or reception duties.

At national headquarters Program Administration includes those positions that are responsible for the management of sub-activities that fall under various activities, such as Job Creation, Employment Training and elements of Employment Services. In regions, this activity includes Directors of Employment and Insurance, Directors of Labour Market and Benefit Programs, Economic Services, District Managers, Metro Managers, CEC Managers, CEC administrative support staff and local office receptionists.

Performance Information/Resource Justification

Figures 33 and 34 show the ratio of Program Administration person-years and expenditures to the Employment and Insurance Program totals. In both instances the ratios have remained relatively constant over the three-year period.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

B. Cost Analysis

Figure 38 shows the total cost of the Program. Revenue credited to the Vote consists of the costs of the Program recovered from the Unemployment Insurance Account in accordance with the Unemployment Insurance Act. Other costs are for accommodation provided by the Public Works Canada ($8,194,000), surgical-medical insurance ($1,232,000), and other miscellaneous services provided free by other government departments ($840,000).

Figure 38: Net Cost of Program by Activity ($000)

	Expenditures 1985-86	Revenues credited to the Vote	Total Estimates 1985-86	Other Costs	Net cost 1985-86	Net cost 1984-85
Employment and Insurance	4,536,814	659,704	3,877,110	10,266	3,887,376	4,403,184

C. Direct Job Creation

1. Program Information

Details and potential effects of direct job creation programs are provided in this section. The Canada Works Program supports contra-cyclical stabilization and adjustment objectives, the LEAD Program supports local employment growth, and the human resource development objectives are met through the Job Corps, Career Access and Youth Training Option Programs.

Canada Works: The Canada Works Program is a versatile program designed to create productive, short-term jobs. The prime objective of the program is to respond to cyclical fluctuations affecting the demand for labour, but it also has the capacity to respond effectively to a wide variety of situations.

The program incorporates the useful features of a number of former initiatives, such as the use of funds for job creation under Section 38 of the Unemployment Insurance Act and the involvement of the private sector in efforts that support economic recovery.

Canada Works can support activities that will contribute to economic recovery through projects that expand and improve production capacity and build necessary infrastructure. As well, it can make valuable contributions to social service, education and recreational objectives of communities.

Private sector projects that support economic recovery and regional development are eligible under the program. While projects cannot be profit-making, various activities, such as prototype development or other pre-production work are permitted, as are undertakings that involve the maintenance, development and improvement of productive capacity.

Canada Works draws from a wide array of sponsors such as civic and fraternal organizations, recreational service clubs and private sector employers. Local governments have used the program to develop the social and economic infrastructure of communities.

The program also seeks to improve opportunities for particular labour market groups. Priority in referral to Canada Works jobs is given to those most in need of employment, such as UI exhaustees and social assistance recipients. Some labour market groups that experience severe barriers to employment are given special consideration under the program. Native people, who continue to face multiple problems in securing and maintaining employment, are provided with a separate allocation. A large portion of the funds available under the program has been used to support employment for young people.

Opportunities for these two groups, as well as for women and disabled persons, are enhanced by encouraging employers to establish a hiring plan within which goals are set for the employment of members of these groups. In the case of women, placement in occupations in which they are traditionally under-represented is promoted.

Local Employment Assistant and Development Program (LEAD): The LEAD program provides assistance that will contribute to long-term employment growth in communities where, irrespective of fluctuations in national economic activity, chronic unemployment and depressed conditions have traditionally prevailed in the past.

The guiding principle underlying LEAD is that business and employment development can be appropriately carried out from a community-based perspective. By involving individuals and groups who live and work in the community to plan and carry out activities that will, in a considered, step-by-step process, lead to improvements in the economic infrastructure and ultimately, the support of viable ongoing businesses, the creation of permanent employment can be secured. Funds available under the LEAD program can be directed to the support of projects and/or corporations.

LEAD corporations are eligible to receive contributions for operating costs and to receive grants for investing in local businesses which can generate new and ongoing jobs. A LEAD corporation is a community-based, non-profit, business-led organization which assists communities with chronic unemployment in building long-term economic strategies that will create permanent job opportunities. It provides counselling services and technical assistance to local entrepreneurs to help them establish new businesses or expand existing ones. It can also provide loans, loan guarantees or take equity positions in local businesses that will generate employment opportunities.

In addition, LEAD funds can be used to support projects for planning, infrastructure and/or business development. LEAD projects foster and develop local business management skills and community planning capabilities. In particular, they can assist in the establishment of businesses that will create ongoing employment. Assistance is also offered to help communities analyze their requirements, develop the communities' infrastruture and plan their job creation strategies.

Career Access Program: This is one of three job creation programs with a strong human resource development focus. With the use of wage subsidies, employment opportunities are created for individuals who experience severe difficulties in securing and maintaining steady jobs. The scope of the program is wide, and its design is so structured as to permit, within a flexible framework, a variety of innovative arrangements as well as the capacity for testing new program directions.

Program participants are able to become involved in a broad spectrum of occupations offered by a variety of employers. The program is directed primarily to groups such as the physically disabled and the employment disadvantaged. In recognition of the varying degrees of difficulty experienced by different labour market groups in their search for and maintenance of jobs, variable subsidy rates are provided.

Under the program, work situations can be tailored to fit the needs of individual participants. For example, part-time employment is permitted for those who, for medical reasons, cannot be easily engaged in full-time work. To provide added support for hard-to-place groups, the program can make contributions to community groups and associations that offer help, such as pre- and post-employment support services, to client groups.

Job Corps Program: Job Corps, like the Career Access Program, is directed toward human resource development objectives. Its main purpose is to prepare severely disadvantaged persons for labour market participation. The current emphasis of the program is on youth, but disadvantaged natives and women, disabled persons, ex-inmates and drug/alcohol abusers are also among the program's clientele. Members of these target groups have generally been unable to secure and retain employment, and have not been able to make productive use of other job preparation measures, such as CEIC/D's training programs.

Many members of these target groups are recipients of transfer payments of one sort or another, and, with the exception of most young people, their position has tended to remain unaffected by any over-all improvements in the economy. By offering an alternative to transfer payments, Job Corps can help to break down the web of dependency. In so doing, the program represents a highly cost-effective means of reducing the burden of employable but dependent groups on society as a whole.

A critical role played by the program is to marshal community resources that will set up and execute projects offering participants a mixture of counselling, work orientation, employment and supportive remedial assistance. The program has demonstrated its ability to bring together the range of financial support, technical expertise, training capability, placement and job opportunities for participants. To further this capacity, Job Corps is able to fund national groups or agencies that coordinate the implementation of a number of activities designed to assist the severely employment disadvantaged.

As well as encouraging links with the voluntary and private sector, other government programs can complement the goals of the program. The human capital investments made under Job Corps are extended and consolidated by the provision to allow graduates of the program to gain entry to the labour market with wage subsidy assistance under the Career Access Program.

Youth Training Option: The Youth Training Option, like Career Access and Jobs Corps, is directed toward human resource development. The objective of the program is to provide young people with a foundation of training and practical experience that will facilitate their transition from school to work, enable them to perform effectively in the labour market, and serve as a basis for further training throughout their adult lives. Participants must be unemployed, likely to fall within the 17-21 age group, and require the training and work experience that employers demand in an increasingly technological society.

The Youth Training Option is a collaborative effort of business, labour, and government. Private sector "managing coordinators" develop and implement a combination of on-site and off-site training and work experience lasting 39 to 52 weeks. Training will encompass life and work skills, the core skills of problem solving, communications, numeracy, and computer familiarization, and general and specific occupational skills.

Summer Student Employment Initiatives: The summer employment initiatives for students were designed to address current and future labour market requirements of students.

In 1984-85, the summer student employment programming was comprised of the following elements: human resource development measures through the Summer Career Access Program, the DND Cadet and Reserve Training Programs and the RCMP Supernumerary Special Constables Program; contra-cyclical and stabilization measures through the Summer Canada Works Program; and a job placement service for students through the Canada Employment Centres for Students network.

Summer Career Access was a wage subsidy program that provided internships for students in the public, private and non-profit sectors. The internships allowed students to test their knowledge in a work situation, develop career-related work skills and acquire the kind of work experience that would help them when they eventually made the move from school to work. Summer Canada Works provided jobs which enabled participants to gain experience while working on projects sponsored by organizations, businesses or individuals.

Canada Employment Centres for Students (CECs), are administered through the Youth Employment Directorate of the Special Groups and Affirmative Action Branch, Employment and Insurance Group. The program provides placement services for students seeking summer employment and for employers requiring temporary summer help. As well, it provides information on government employment programs for students and referrals under CEIC/D's summer student employment initiatives. CECs are funded from resources provided by Treasury Board Vote 10.

Improving the efficiency of placement services to students in some 450 CECS is measured by the year-to-year comparative changes in the number of placements recorded. Placement volumes are dependent upon both the prevailing regional economic conditions and the extent to which "Hire-A-Student" publicity and promotion is realized.

The purpose of the Native Internship Program is to increase the summer employment opportunities for native students in various facets of CEIC/D's operations, including the CECs for Students. The program is specially funded through resources provided by Treasury Board Vote 10.

2. Regrouping of 1983-84 Job Creation Programs as a Result of Consolidation

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Immigration levels are based on the calendar year and reflect the annual report that is tabled in Parliament. For 1985, the Immigration Program has the following objectives:

- to admit 85,000 to 90,000 immigrants made up of 11,000 government-sponsored refugees, 4,000 privately-sponsored refugees, 5,000 to 8,000 persons under special humanitarian programs, 5,500 to 6,500 selected workers and 2,200 entrepreneurs or self-employed persons; (for definitions of immigrant categories, see p. 4-44); the remainder is made up of family class immigrants plus the spouses and dependents of selected workers, business immigrants and retirees; and

- to admit students, temporary workers and other visitors; in 1985 Immigration should issue and/or extend 130,000 employment authorizations, and 93,000 student authorizations while admitting up to 35 million visitors over all.

Operationally, Immigration has the following goals:

- to carry out Canada's international responsibilities towards refugees and other humanitarian cases by processing a projected 6,500 requests for refugee status in Canada;

- to ensure that inadmissible persons do not enter or remain in Canada, by conducting a projected two million secondary examinations on the 35 million persons who are seeking to enter Canada, and carrying out 70,000 investigations of persons suspected of being in violation of the Immigration Act once they have entered Canada;

- to facilitate the early adaptation of immigrants in Canada by providing adjustment assistance to recently arrived indigent immigrants at a cost of $30,719,000, while providing up to a further $3,144,000 for settlement and adaptation services;

- to improve the efficiency and effectiveness of the Immigration Program delivery process by continuing the development and implementation of the Field Operational Support System (FOSS); and

- to prepare recommendations for the Minister on approximately 4,000 refugee status claims and dealing quickly and effectively with an ever-increasing backlog of outstanding refugee status claims, by reducing the time taken to process initial committee decisions on claims.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Recruitment and Selection	19,395	18,760	635	4-21
Enforcement and Adjudication	42,614	44,904	(2,290)	4-24
Settlement	37,184	35,166	2,018	4-30
Refugee Status Advisory Committee	1,688	1,700	(12)	4-34
Program Administration	24,690	23,825	865	4-38
Total	125,571	124,355	1,216	
Person-years	2,229	2,301	(72)	

* There has not been any significant change from the 1984-85 Main Estimates. The 1984-85 forecast is $2.4 million or two per cent more than the 1984-85 Main Estimates of $122 million (Extracts from Part II of the Estimates, page 4-4).

Explanation of change: The financial requirements for 1985-86 are one per cent or $1.2 million higher than the 1984-85 forecast expenditures. This is primarily due to increases in personnel costs and in the contributions for the settlements of immigrants, offset by a decrease in resources related to the enforcement activity due to the new visitor visa requirements.

B. Recent Performance

1. Highlights

The highlights of Program performance for 1983-84 were as follows:

- the admission of immigrants to Canada during the 1983 calendar year was 89,034, a shortfall of 15 per cent from the level set, due to the decrease in family class and independent applications;

- a total of 8,961 of a forecast 10,000 government-sponsored refugees were admitted; the shortfall was due to a decline in Eastern European refugees and the problems associated with developing resettlement programs in Africa and Middle East; also, there was an increase in special humanitarian admissions of persons not meeting the refugee and designated class definition;

- a total of 6,407 selected workers were admitted; the 1982 measures restricting the admission of selected workers to those with approved job offers, have proved to be successful;

- a total of 12,524 entrepreneurs, self-employed persons, retirees and their families were admitted, as well as persons admitted for special humanitarian reasons, thereby showing the success of attracting business immigrants as well as the flexibility of our humanitarian programs;

- the number of students and temporary workers admitted increased by five per cent and 10 per cent respectively over the previous year; and

- the problem of outstanding refugee claims in Canada was eased by the imposition of visitor visas on countries such as India, Sri Lanka and Bangladesh, and to a lesser degree because of late implementation (March 14, 1984) on Jamaica, Guyana, Guatamala and Peru; this resulted in a fewer number of refugee claims being made in Canada.

The Immigration Program's performance against its stated operational goals for 1983-84 is as follows:

- in relation to carrying out Canada's international responsibility towards refugees and other humanitarian cases,

  - the total number of approved requests outside of Canada for refugee status was 92 per cent of the projected volume of 5,000;

- in relation to ensuring that inadmissible persons did not come into or remain in Canada,

  - the actual number of investigations in 1983-84 was 71,000; this corresponds well with the projected figure of 74,000, the variance being less than five per cent;

  - a total of 1.9 million secondary examinations were carried out; this volume is similar to preceding years, but is below the estimate of 2.5 million; the decline was due to fewer persons seeking to enter Canada as well as better selection by primary examination officers; and

  - the total number of extensions and authorizations processed was 96 per cent of the projected volume of 232,000;

- in relation to facilitating the early adaptation of immigrants in Canada,

  - the Adjustment Assistance Program's budget for 1983-84 was $27.3 million; however, a number of cost saving measures initiated by the national headquarters Settlement Branch at the beginning of the fiscal year allowed Immigration to fulfill its obligations to the program at a total cost of only $24.7 million;

- in relation to improving the efficiency and effectiveness of the Immigration Program delivery process,

  - the Field Operational Support System (FOSS) started Phase III of its development; the User Requirements document was prepared and a Treasury Board submission was made; a preliminary automated registry became operational in March 1984 at four Canada Immigration Centres (CICs) in Montreal: to facilitate this early registry implementation, the Status Entry module was given a lower priority and will be implemented in 1985-86; and

  - the problem of outstanding refugee status claims was eased by the imposition of visitor visas on certain countries as noted on the previous page; this resulted in lower numbers of refugee claims being made, and also a new procedure for dealing with refugee claims is in the development stage.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Recruitment and Selection	17,705	562	14,065	472	3,640	90
Enforcement and Adjudication	46,976	1,053	45,280	1,163	1,696	(110)
Settlement	30,314	63	34,837	100	(4,523)	(37)
Refugee Status Advisory Committee	1,294	23	1,671	23	(377)	-
Program Administration	23,119	548	20,587	456	2,532	92
Total	119,408	2,249	116,440	2,214	2,968	35

Explanation of Change: The prime cause of overutilization of resources in the Immigration Program in 1983-84 was the cost of servicing the backlog of people in Canada seeking refugee status, as well as increased detention and deportation costs for persons seeking to enter or remain in Canada illegally. The need to deal with this growing volume as well as an increase in the number of students and temporary workers has precluded, as expected, a shift in emphasis from Recruitment and Selection to Enforcement activities.

In addition, the program used 36 person-years under the Summer Canada program which were funded by transfers from the Treasury Board Vote 10 - Employment Initiatives.

C. Background

1. Introduction

The Immigration Program recruits, admits and helps in the adaptation of people deemed suitable residents, citizens, workers and visitors for Canada, and protects Canadians against the entry of undesirable non-Canadians. In these endeavours CEIC/D works with federal government departments, the provinces and the private sector. The primary federal departments with which the Immigration Program is involved are:

- External Affairs, which provides immigration services abroad;
- Revenue Canada (Customs), which provides primary immigration inspection at points of entry to Canada;
- Solicitor General (RCMP), which has been traditionally responsible for the prosecution of immigration violations on behalf of CEIC/D, and for liaison on security matters;
- Health and Welfare, which is responsible for assessing the medical histories of those classes of persons requiring medical examination before being admitted to Canada, and for providing non-insured medical services to immigrants on arrival in Canada; and
- Secretary of State, which is responsible for the longer-term social and cultural integration needs of immigrants.

2. Legal Mandate

The legislation which guides CEIC/D in immigration matters is the Immigration Act, 1976 and Immigration Regulations, 1978.

3. Program Objective

The program objective is to administer the admission of immigrants and visitors in accordance with the economic, social and cultural interests of Canada.

4. Program Organization for Delivery

Activity Structure: The Immigration Program is divided into five activities:

- Enforcement and Adjudication covers the tasks associated with the examination of all persons entering Canada and the exclusion of certain persons in order to protect Canadians from undesirable non-Canadians;

- Recruitment and Selection addresses the functions necessary for attracting immigrants as suitable future residents and citizens of Canada;

- Settlement is concerned with the adaptation of immigrants and refugees into the social, economic and cultural life of Canada;

- Program Administration provides the support services and coordination needed to ensure effective and efficient use of resources; and

- the Refugee Status Advisory Committee (RSAC) reviews all claims for refugee status in Canada and advises the Minister on whether the claimants are Convention refugees; although the RSAC is included within the activity structure of the Immigration Program for funding purposes, it is an independent advisory body to the Minister.

Figure 3: Activity Structure

Organization Structure: Immigration operations are highly decentralized. Of the approximately 2,200 personnel, over 2,000 are located in 10 regional offices and 106 CICs across the country.

The five branches at national headquarters develop policies and systems to provide for the efficient and uniform application of the Immigration Act and associated regulations.

The 10 Regional Executive Directors/Directors General, through the Directors of Immigration, are responsible for the application of policies, systems and procedures relating to the government's immigration policy.

D. Planning Perspective

1. Environment

The overall aims of the Commission/Department include realizing the full potential of Canada's human resources and furthering the effective operation of the labour market in meeting occupational shortages and overcoming specific bottlenecks related to workers' skills. Immigration policy for the target period will continue to balance Canada's economic interest with its social and humanitarian commitments. The CEIC/D is committed to a 'Canada First' policy which emphasizes admitting skilled workers only when workers with needed skills cannot be found within Canada.

A three-year immigration planning cycle, which allows for annual reviews and adjustments, is now in operation. The present plan maintains Canada's role as a main immigrant-receiving country. The magnitude and composition of immigration is determined by a variety of domestic and international factors. The plan announced on November 20, 1984 calls for immigration levels of 85,000 to 90,000 in calendar year 1985.

The views of the provinces and non-governmental organizations will be key domestic influences, as will conditions in the labour market and the increasingly closer working relationship of the CEIC/D with employers. A marked slowdown in domestic labour-force growth (expected to continue beyond 1987-88) will enhance the attractiveness of skilled foreign workers once domestic labour-market demand picks up. This portion of immigration will be increased or reduced according to infrastructural considerations and such matters as the absorptive capacity of private and governmental services for immigrant settlement, and educational and health-care delivery systems.

A key international influence on immigration will be the refugee situation. Because of the volatile nature of the global refugee picture, consultations with the United Nations High Commissioner for Refugees and with refugee-receiving nations will continue. This will ensure that any planning, necessarily of a short-term nature, will meet both international and Canadian interests.

Another important aspect of immigration policy relates to the admission of students, temporary workers and other visitors to Canada. The number of students admitted annually is based on provincial priorities and goals of different educational institutions across the country. The admission of temporary workers is determined by employer requirements which cannot be met within the domestic labour force, together with reciprocal exchange arrangements with other countries.

Canada's attractiveness in much of the world means that it will continue to receive immigrants by legal or non-legal means. It is foreseen that persons in the inquiry process will continue to make use

of the refugee provisions of the Immigration Act in order to remain and find employment in Canada for lengthy periods of time. Effective action to ensure enforcement of the Immigration Act is a continuing requirement, with high priority given to preventative measures.

A slowdown over the short term in the growth of the Canadian economy, employment and personal income, coupled with continued high levels of unemployment, will continue to place greater public demands on tax-supported programs in the public and private sectors. This is likely to result in increased federal settlement costs, both directly and indirectly, as other levels of government and the voluntary sector offset their escalating expenditures by cutting back on settlement services and/or exerting pressure for increased federal support. In addition, the liberalization of the refugee determination guidelines has led to higher volumes of refugee claims and a greater number of indigent claimants seeking federal financial assistance for longer periods of time. These pressures will force increasing attention on administrative practices to improve the system of determining refugee status.

2. Initiatives

In 1985-86, the following initiatives will be emphasized. These are related to immigrant settlement, preventive enforcement, refugee policy review, and improved quality of service in program delivery.

Immigrant settlement: Continuing priority will be assigned to efforts leading to early placement, the maintaining of activities leading to the economic settlement of newcomers, particularly refugees, and the emphasis on knowledge of and access to community services.

While new initiatives regarding language training have not been addressed, the matter continues to be an issue and could require some resourcing in 1985-86.

For further details on settlement, see pages 4-30 to 4-33.

Preventive Enforcement: In the past, Immigration has relied on the imposition of visas to limit the scope of potential problems. Building on the international conference held in 1984, Immigration will begin in 1985-86 to take a strategic approach to enforcement through international cooperation, this will allow an easier exchange of information and methodology. Inherent in this international cooperation is increased cooperation with airlines. As part of the Immigration Program is carried out by External Affairs, a joint enforcement strategy will be developed for overseas operations.

For further details on enforcement, see pages 4-24 to 4-29.

Refugee Policy Review: The Commission has adopted a strategy to deal with the increased number of refugee claims in Canada, the development of delays in reviewing such claims, and the attendant increase in costs and abuse of the system by fraudulent claimants. Action is being taken to deploy existing resources to process the backlog. A report has been commissioned from Rabbi Plaut to deal with the long-term implications. The report will probably result in a two-pronged approach: (1) new policies and legislation to govern the future, and (2) a methodical approach to eliminating the backlog.

Improved quality of service: The continued development of the automated Field Operational Support System (FOSS) will remain a high priority in 1985-86. FOSS is an on-line information network for local Canada Immigration Centres (CICs), airports and border points. It contains case status information, and has update capability. The development and implementation of FOSS III is currently planned over a four-year period starting in 1983-84 and ending in 1987-88 at a cost of $7,809,100. The approved activities for 1985-86 are the installation of national status entry, status query, national registry and a pilot project for full document entry in the British Columbia region.

3. Update on Previously Reported Initiatives

Immigration settlement: A major review of policies and programs resulted in a change of parameters for the Immigration Settlement and Adaptation Program (ISAP). The consultative process with provinces produced a framework paper representing the views and needs of the provinces and territories. CEIC/D expects the provinces to respond to a call for consultation on issues of policy coordination, and the resolution of certain operational problems.

Preventive enforcement: The imposition of visas has proved effective in preventing the entry of inadmissible persons to Canada while not causing any reduction in legitimate visitors to Canada.

Refugee Policy Review: A study on refugee policy is being carried out. A final report should be received by the end of January 1985. This may result in a request for further funding to carry out the initiatives suggested in the report in order to obtain a system that is fair, fast and affordable.

Improved quality of service: The automated FOSS III registry was implemented fully in October 1984 and completed the registry system in Montreal at a cost of $150,000. Data conversion was started for 14 registries in Canada and detailed design was initiated for the status entry module.

4. Program Effectiveness

Six areas are examined when assessing effectiveness in fulfillment of the Immigration Program's objective. Three are directly related to the planning of immigration levels and can be summarized as follows.

Social Aims: The reunification of families, through family-sponsored and independent immigration, supports the federal government's commitment to the maintenance of the family unit in Canada. As the separation of immediate family members can create hardship and severe stress, maintenance of the family unit is an important step in ensuring the social stability of immigrants.

Humanitarian Aims: Through its refugee policy and programs, Canada has continued to support the humanitarian objective of its immigration policy, and to fulfill its international legal and moral commitments.

Economic Aims: Canada accepts immigrants who make a significant contribution to the economy and fill labour market needs that cannot be met within Canada. The entry of those applicants is governed by specific selection criteria and is oriented to choosing workers for the labour market and attracting entrepreneurs who will create new job opportunities for Canadians and permanent residents.

Careful balancing of social, humanitarian and economic goals is maintained through extensive consultation with the various levels of government and the private sector. The three-year planning cycle for immigration, with annual reviews and any necessary adjustments, facilitates consultation and enhances effectiveness. The three-year planning horizon also helps the provinces determine future needs and resource allocations in such areas of provincial jurisdiction as education, housing and social services.

The refugee and designated class component is planned for one year because of the volatility of the world refugee situation.

The following chart indicates how classes of immigrants relate to the social, humanitarian and economic goals within the over-all plan for the admission of 85,000 to 90,000 immigrants in calendar year 1985.

Figure 5: Program Effectiveness Measures

Objective	Principal Component	Control Variable	1985 Levels
Social	Family class	- Demand by relatives in Canada - Definition of eligibility - Financial capacity of sponsor	45,000
Humanitarian	Refugee, designated classes and persons admitted under Special Programs	Eligibility governed by refugee definition, by Designated Class Regulations and Special Programs.	20,000 to 23,000
Economic	Selected workers, business immigrants	Intake planned annually on 3-year basis. Controlled by selection criteria and job validation procedures	5,500 to 6,500
Total	The over-all level comprises all of the above, plus spouses and dependents of selected workers and retirees.		85,000 to 90,000

The other three areas where effectiveness of the program is measured are as follows.

Enforcement: Immigration legislation must be enforced to ensure that inadmissable persons do not come into or remain in Canada. A large part of the Immigration Program resources are expended on numerous prevention-oriented activities. The preventive, control, and investigative measures taken by the CEIC/D are comprehensive and under continuing review to ensure that Canadian society is protected from undesirable non-Canadians. Specific activities and results are outlined in Section II (pages 4-24 to 4-29).

Settlement: A potential immigrant's likelihood of adapting to Canadian society is always considered during the recruitment and selection phase. In addition, a comprehensive strategy is being developed to ensure that basic services which help recent arrivals become established are made available to all immigrants through ISAP.

These service initiatives will be the result of cooperation and participation with other federal departments and provincial governments, and the mobilization of activities by community groups. Further information on ISAP and other settlement activities appears in Section II (pages 4-30 to 4-33).

Admission of Students and Temporary Workers: In facilitating the admission of students, CEIC/D responds to the wishes of educational institutions across the country, and to the goals and priorities set by individual provincial governments. CEIC/D regulates the admission of temporary workers so that employers having seasonal or other temporary vacancies are given access to foreign temporary workers, provided that no Canadian citizens or permanent residents are available to accept the vacancies or to be trained for them. This ensures that employers' needs are filled through foreign sources only when it has been determined that their entry has no negative effect on the Canadian job market.

Section II
Analysis by Activity

A. Recruitment and Selection

Objective

To develop policies and programs that regulate the volume and composition of immigrant and non-immigrant movement to Canada from abroad and to implement these policies in Canada.

Resource Summary

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Recruitment and Selection	17,705	562	14,065	472	3,640	90

Description

Recruitment and Selection activities are directed to planning, implementing and managing the level of immigration, the composition of the immigrant movement (immigrants admitted for social, humanitarian or economic reasons), and the numbers and composition of various non-immigrant categories. These include temporary foreign workers, foreign students and tourists. Recruitment and Selection activity abroad is carried out by the Department of External Affairs.

Immigration levels and components are planned for a three-year period. These are based on extensive annual consultations with provincial governments, labour and management organizations, religious institutions and other non-governmental agencies.

The levels are approved by Cabinet and a new three-year plan is presented to Parliament by the Minister each year. Policies relating to non-immigrant programs are developed continually in consultation with relevant private and public organizations.

Recruitment and Selection policies are developed at national headquarters with input from the regional offices. The involvement of field personnel in Recruitment and Selection activities entails on the examination and approval of sponsorship applications within Canada, the landing of immigrants within Canada when humanitarian or compassionate grounds exist, the approval of certain types of arranged employment for independent applicants abroad and transactions concerning the status in Canada of temporary workers and students.

Performance Information/Resource Justification

The major indicators of work load for the activity are presented in Figure 9. The need to provide service and control in many smaller urban centres contributes to a problem in terms of fixed resources versus productivity. The uneven distribution of work and resources leads to varying levels of efficiency and reduces flexibility in reacting to work load changes.

Figure 9: Work Load by Major Indicator

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Refugee claims	6,500	5,600	4,600
Immigrant applications	59,410	64,887	62,391
Extensions and authorizations	223,000	239,303	221,683
Person-years	561	563	562

The controlled decline in independent immigrants who in turn tend to sponsor their relatives, together with the recent economic slowdown which has made it more difficult to afford to sponsor relatives from abroad has resulted in fewer immigrant applications. Also, a system of long-term (up to three years) visitor applications has been introduced and this has lowered the number of authorizations that need to be issued.

Finally, refugee claims made in Canada were more numerous than predicted. As a result, it has been necessary to increase the estimates of work load in this complex and time-consuming task.

In 1985-86, the work load for this activity within Canada is expected to remain relatively stable as indicated in the above figures. Ninety-five per cent of the person-years utilized in this activity are located in the regions and are directly involved with immigrants, temporary workers and students in Canada. An estimated 223,000 authorizations and extensions will be issued for temporary foreign workers and foreign students.

B. Enforcement and Adjudication

Objective

To provide management and support of activities for the protection of Canadians against undesirable non-Canadians.

Enforcement: Specific goals and initiatives include the following:

- to administer the provisions of immigration law relating to the movement and examination of all people seeking admission to Canada and the detection and exclusion or removal of people who fall under inadmissible classes, by
  - reducing the movement of inadmissible persons to Canada through the development and implementation of preventive strategies in Canada and overseas;
  - ensuring that the human rights of all individuals subjected to enforcement action are adequately safeguarded;
  - increasing operational efficiency by facilitating the examination and control of all persons seeking to enter Canada at all ports of entry; and
  - improving consistency in the application of enforcement activities throughout Canada.

Adjudication: The specific goal is as follows:

- to conduct immigration inquiries and release hearings fairly and efficiently in accordance with the rules of natural justice and the Immigration Act and Regulations.

Resource Summary

Adjudication	4,203	95	3,587	77	616	18
Total	46,976	1,053	45,280	1,163	1,696	(110)

Description

The Enforcement and Adjudication activity consists of the following two sub-activities.

Enforcement: This sub-activity involves the application and enforcement of immigration law at ports of entry within Canada, as it relates to the entry, stay and removal of persons from Canada.

It includes managing and supporting activities to protect Canadians against undesirable non-Canadians and, more specifically, administering the provisions of the Immigration Act and Regulations relating to examination, apprehension, detention, inquiries and

prosecutions; examining all people coming into Canada (visitors, immigrants and returning residents); investigating immigration violations; representing the Minister at inquiries; processing immigration appeals; and arranging the departure of those ordered removed.

Adjudication: Adjudicators are required to conduct inquiries and release hearings fairly and efficiently in accordance with the Immigration Act and Regulations and the rules of natural justice.

When people are refused entry to Canada or asked to leave once here, inquiries are held to determine whether they will be allowed to enter or remain in this country.

Adjudicators review the detention of persons detained pursuant to the Immigration Act where that detention exceeds 48 hours, and review it once every seven days thereafter.

Inquiries and release hearings are quasi-judicial and adversarial in nature. Decisions made by adjudicators may be reviewed by the Federal Court of Canada, and, in some instances, by the Immigration Appeal Board.

In order to conduct inquiries forthwith and review detentions within the time-frames required by the Act, adjudicators are located in 14 locations across Canada.

Performance Information/Resource Justification

Enforcement: There are five major indicators of work load for this sub-activity. In several areas, the volume of work that materialized during 1983-84 varied from the estimated work load. In the case of secondary examinations, a return to annual growth in visitor traffic, which had been the case until recent years, did not occur in 1983-84 as anticipated. In fact, there were 10 per cent fewer foreign visitors (other than U.S. citizens) and virtually no growth occurred in the number of Americans entering Canada, all of which meant fewer than expected secondary examinations.

Although total visitor traffic declined slightly in 1983-84, the volume of reports on persons seeking to come into Canada (Section 20(1) Reports) climbed past the estimated figure. This occurred because Canada continued to attract many persons, principally from Third World countries, who sought to avail themselves of Canada's refugee claim provisions. It is also true that Immigration officers may exercise discretion and either complete a Section 20(1) Report against an inadmissible person or allow that person to withdraw from Canada without writing a report. Volume variances may reflect regional differences in the use of this discretion.

In 1985-86 some 30 to 35 million visitors are expected to come to Canada; approximately two million will be examined by immigration officials. In addition, some 70,000 immigration investigations will be completed with 5,700 removals expected. Resource levels are determined for the most part by comparing historical and projected work load. However, the requirement to provide service and control at numerous small ports of entry, and on a 24-hour basis at certain points, creates a problem in terms of fixed resources versus productivity. The uneven distribution of work load and resources leads to widely disparate levels of efficiency and also reduces flexibility in reacting to work load changes.

Figure 13: Enforcement Work Load

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Secondary examinations	2,045,120	2,073,250	1,924,577
Section 20(1) reports	26,140	19,850	24,887
Investigations	69,920	74,060	71,004
Cases presented	12,760	12,260	12,805
Removals effected	5,630	4,550	6,391
Person-years	951	990	958

Adjudication: The work of the Adjudication Directorate is measured in terms of the number of inquiries and detention review hearings conducted.

Figure 14: Adjudication Work Load

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Inquiries concluded	9,500	9,000	9,180
Inquiries in progress	11,000	12,700	10,744
Detention review hearings conducted	4,800	5,500	7,442
Person-years	96*	78	95

* Includes 18 person-years for support services which were previously charged to other activities.

As one of the goals of the Directorate is the termination of inquiries by rendering decisions, productivity can be expressed in terms of the number of inquiries concluded per adjudicator-day available. In 1983-84, 0.95 decisions were reached per adjudicator-day available, an improvement over the 1982-83 rate of 0.88. Our national goal remains 1.0 conclusion per adjudicator-day available, but the growth of inquiries in progress (adjournments), which is described below, prevented the Directorate from meeting that goal in 1983-84. For the same reason this goal will not be met in 1984-85. The total number of inquiries concluded during 1983-84 exceeded that of 1982-83. This was achieved through the extensive use of overtime during the past summer and fall in order to deal with the growing work load, particularly in Quebec.

The continued growth of inquiries in progress during 1983-84 was a direct result of the increasing number of refugee claims made at inquiries. This figure should peak in 1984-85. While approximately 64 per cent of all inquiries opened during the first quarter of 1984-85 were adjourned for refugee claims, the introduction of visa requirements for four countries which were producing high volumes of claims should result in an improvement in the situation during 1984-85. These new visa requirements should permit the number of inquiries concluded to grow further as the pressure of new cases is lessened.

The number of detention review hearings in 1983-84 exceeded that of 1982-83 because of the increased volume of refugee claimants as well as general economic conditions. The expected decrease of refugee claims at inquiries during this fiscal year will result in a reduction of the number of detention reviews for 1984-85. Because of the length of adjournments for refugee claims, the number of detention review hearings will not return to pre-1982-83 levels.

Because of the changing demand patterns it has been necessary in the past to shift person-years between field offices, close offices and restructure geographic responsibility areas. During 1983-84, the Directorate closed two offices and reduced the staff of a third office in order to meet the demands at other localities. Increased volumes have limited the flexibility needed to respond to future changes in demand patterns.

The other goal of the Directorate is to render decisions fairly in accordance with the Act and Regulations and the rules of natural justice. A measure of the effectiveness of this function is the number of decisions overturned by the Federal Court of Appeal as a percentage of the number of inquiries concluding with a removal order or a departure notice. The percentage of these inquiries that are appealed to the Federal Court is a general measure of the acceptance of adjudicators' decisions. Given the time lag between the conclusion of an inquiry and the decision of the Court, these figures are measured on a cumulative three-year rolling average. While the percentage of decisions appealed is expected to continue to rise, the percentage of decisions overturned should remain low.

Figure 15: Concluded Inquiries Appealed and Overturned

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Percentage of decisions appealed	7.2	6.8	4.3
Percentage of decisions overturned	0.25	0.25	0.18

C. Settlement

Objective

To facilitate the adaptation of immigrants, including refugees, to the social, economic and cultural life of Canada through services provided by federal, provincial and municipal governments, and voluntary organizations. Within this objective, specific targets include the following:

- the average cost per recipient on the Adjustment Assistance Program should not exceed $2,900;
- the average cost per recipient on the Immigrant Settlement and Adaptation Program should not exceed $30; and
- the average time clients receive adjustment assistance should not exceed 10 months.

Resource Summary

	$	P-Y	$	P-Y	$	P-Y
Settlement	30,314	63	34,837	100	(4,523)	(37)

Description

The Settlement activity consists of the following three national programs.

The Adjustment Assistance Program (AAP) provides contributions and loans to recently arrived indigent immigrants to ensure their basic needs of life are met until economic self-sufficiency is attained. The AAP also provides contributions to pay the cost of transportation to Canada of handicapped refugees and their dependents.

The Immigrant Settlement and Adaptation Program (ISAP) provides settlement and adaptation services to immigrants on their arrival in Canada, through financial assistance to voluntary organizations. Persons eligible to receive services must be permanent residents or persons to whom the Commission intends to grant permanent resident status, regardless of their length of residence in Canada. Access to service is controlled through the purchase of selective and direct settlement services deemed essential and useful only to newcomers and designed to meet needs normally associated with the first year of settlement.

The Transportation Loan Program facilitates the admission of prospective immigrants by providing recoverable loans to pay the costs of their transportation to Canada.

Performance Information/Resource Justification

AAP and ISAP: Approximately 91 per cent of the Settlement activity's expenditures of $37.2 million in 1985-86 is for contributions, to provide financial assistance to recently arrived indigent immigrants and voluntary organizations that assist immigrants in their adaptation to Canada. Figure 19 presents the expected cost per immigrant for AAP. It also includes the average length of time immigrants are in receipt of assistance under AAP.

Figure 19: Adjustment Assistance and Immigration Settlement and Adaptation Programs

	Actual 1982-83	Actual 1983-84	Forecast 1984-85	Estimates 1985-86
Total contributions	27,652,000	27,849,000*	31,863,000	33,863,000
AAP				
Average cost	2,513	2,461	2,872	2,793
Average time (months)	6.9	7.7	7.5	7.5
Program cost	24,763,000	24,636,000	28,719,000	30,719,000
ISAP				
No. of contracts	134	136	121	120
Program cost	2,889,000	3,151,000	3,144,000	3,144,000

* Includes $62,000 expended under the New Employment Expansion and Development Program

In March 1982 several cost-saving measures were implemented to ensure better financial control of the AAP. These measures, coupled with the review and clarification of operation guidelines, resulted in a reduction in the average cost per AAP recipient from $2,513 in 1982-83 to $2,461 in 1983-84. These savings were achieved in spite of an increase in the average period of receipt from 6.9 months to 7.7 months over the corresponding period.

In an effort to keep the average cost per recipient down, and to reduce the average length of time a person is in receipt of assistance, a number of new proposals are being considered. One of these proposals deals with the concept of "host families". Under this arrangement small grants of $500 from the Adjustment Assistance Program would be given to community organizations when families within their membership agree to assist local Commission officials in settling government-sponsored refugees. It is believed that this approach will lead to a faster and more successful integration of the refugee, thus reducing longer-term social and economic cost. Therefore, as a result of the "personal" integration that a host family will be able to provide, the CEIC/D should continue to achieve its integration objectives at no additional cost to the AAP. At present, consultation is continuing and it is expected that the concept will be piloted in January 1985. Further pilots studies will be undertaken during 1985-86 and, depending on the results, it is anticipated that the host family concept will be implemented in 1986-87.

Transportation Loan Program: Loans are issued to immigrants and refugees to cover the costs of their transportation to Canada and, under the Admissibility Program, to pay the cost of their medical examinations. Section 121(1) of the Immigration Act, 1976 authorized the Minister of Finance to provide $60 million to the Minister of CEIC/D for this purpose. The amount of loans outstanding at any one

time cannot exceed this limit. Loans are interest-free to refugees and members of designated classes; other recipients are charged interest at a rate established annually by the Department of Finance. The rate for calender year 1984 is 10.65 per cent. As of August 30, 1984, there were 42,652 loans outstanding, amounting to $45.9 million. The Transportation Loan Program is recorded in the Public Accounts of Canada under the title of Assisted Passage Scheme.

The rate of recovery of outstanding loans is approximately $1 million per month. For fiscal year 1983-84, a total of 9,277 loans were made amounting to $13,699,144. There are no means available to accurately forecast future dollar requirements or the number of loans, because the use of the fund is based on the need for assistance.

D. Refugee Status Advisory Committee

Objective

To fulfill Canada's international legal obligations with respect to refugees, as established by the Immigration Act, 1976.

Refugee Status Advisory Committee	1,294	23	1,671	23	(377)	-

Description

The Refugee Status Advisory Committee (RSAC) was established to advise the Minister on cases where people claim Convention refugee status (Immigration Act 1976, Section 48(1)). As a signatory to the Geneva Convention in 1951 and its 1967 protocol, Canada adheres to the principle that non-Canadians within our territory or at our ports of entry will not be returned to a country where they have "a well-founded fear of persecution".

RSAC members consider each claim for refugee status individually and provide recommendations to the Minister, or his/her delegates, on whether the claimant qualifies as a Convention refugee. In assessing each claim, members consider the testimony of the individual, conditions within the country of origin, the definition of Convention refugee (in the Immigration Act, 1976) and guidelines supplied to the RSAC in 1982 by the then Minister.

The RSAC operates independently of the Employment and Immigration Commission, but is subordinate to the Minister, to whom the RSAC Chairman reports. The members are appointed by the Minister from the public and private sectors, and are supported by a secretariat which includes operations, research and administrative services.

Performance Information/Resource Justification

The case load to be handled by the RSAC is non-discretionary and is largely determined by worldwide conditions in the area of human rights. The RSAC must consider each claim individually and provide recommendations. Since its inception in April 1978, there has been a steady and significant increase in the volume and processing time of claims in RSAC. The former reflects both the state of human rights conditions in many countries and the attractiveness of Canada as a country of desired residence, while the latter has been seriously compounded by ongoing resource problems. Figure 23 demonstrates the current claim load and processing time.

Figure 23: Volume of Claims and Processing Time

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Outstanding claims at beginning of year	4,000*	2,673*	1,479
Claims received	5,500	5,200	4,283
Claims processed	2,500	3,350	2,648
Average processing time (years)	2	1.5	1

* Each year a certain number of claims are not processed but are withdrawn from the outstanding claims because of special programs or because the claimants have left Canada.

In 1982-83, the Committee mounted a concerted effort to process a backlog of what were termed "manifestly unfounded claims". (In April 1, 1982 approximately 60 per cent of the backlog awaiting consideration by the Committee represented this type of claim). The processing of such a claim is significantly less time-consuming for the Committee than that required to deal with a normal claim. In fact, this effort succeeded in producing a high volume of output, as represented by decisions, in the fiscal year of 1982-83 when over 3,100 claims were processed. The following fiscal year, in spite of additional resources, less output was achieved because far fewer claims represented the "manifestly unfounded" type which could be expedited. However, the expedited process employed has been subjected to considerable public criticism including the Task Force on the Refugee Status Determination Process which reported in November 1981. At the present time the backlog of RSAC includes less than 5 per cent of what were previously labelled "manifestly unfounded claims". As a result the Committee is faced with an ever-growing backlog that is almost exclusively made up of the more time-consuming full-review claims.

During 1984-85, the Commission augmented the approved person-years of the RSAC to provide a total of 31 person-years. The projections for 1985-86 are based on a reduced allocation of 26 person-years. However, the volume of claims is increasing and resources for the RSAC are under review as part of a larger examination of the immigration inquiry and the refugee claim backlog.

A pilot project involving oral hearings began in May 1983. Operating at this time in Toronto and Montreal, the project involves interviews of refugee claimants by RSAC members after the formal examination under oath required by the Immigration Act. The target processing time for claims with oral hearings is two months from the

examination under oath until the Minister's decision is rendered; other claims can currently take up to 18 months for this part of the process. The project, which is strictly voluntary for claimants, has proven both popular and successful while providing valuable information that will be useful in consideration of any changes to Canada's refugee determination process.

The volume of new refugee claims has led to considerable backlogs not only at the RSAC, but in field offices across Canada. There are presently 3,500 or more active claims requiring processing prior to their transmission to the Committee where the backlog is approximately the same size. The field backlog is particularly severe in Ontario and Quebec. Measures are being considered in both those regions to augment the volume of claims currently being sent to the RSAC.

In order for the RSAC to overcome the backlog problem, a variety of measures have been implemented and more are being considered including the review of resources outlined earlier. Use of overtime, loaned resources and curtailing of other RSAC activities are already being employed. The RSAC has increased the number of weekly sessions of its members to the highest level in its history to review claims, and will continue this effort as long as resources are available. Further internal administrative changes and/or statutory changes to the refugee determination process already under review will require ongoing examination and implementation where feasible, if claims are to be adjudicated fairly and within reasonable time-frames.

E. Program Administration

Objective

To provide, at an acceptable cost, the direction, planning, control, information and coordination needed to ensure effective and efficient use of Immigration Program resources.

In 1985-86 the target for the Program Administration activity is:

- to perform specific tasks (for example, continue FOSS III development) designed to improve the efficiency and productivity of program operations.

	$	P-Y	$	P-Y	$	P-Y
Program Administration	23,119	548	20,587	456	2,532	92

Description

This activity includes the functions of the Executive Director, all Regional Directors General or Directors of Immigration and their immediate staff, and the Planning and Program Management Branch at national headquarters.

The Program Administration activity includes legislative, policy and procedural coordination; resource planning and management; performance measurement and productivity improvement; the collection and dissemination of program information, and the planning, development and maintenance of program information systems and computerized data bases. It provides staff training and development, and management services in support of program and field operations, as well as secretariat services for the Immigration Program and the Minister's Immigration portfolio.

Performance Information/Resource Justification

The over-all objective of the Program Administration activity is to ensure the efficiency of service of the Immigration Program through planning, direction, control, information coordination and program support. Figure 27 provides a comparison of the number of person-years expended in the Program Administration activity to the total person-years utilized in the Immigration vote.

Figure 27: Program Administration Activity: Persons-Years Comparison

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Program Administration person-years	533	577	548
Total Immigration Program person-years	2,229	2,301	2,249

The Program Administration activity has identified the following significant planned outputs for 1985-86:

- implementation of the findings of the study on safety and security of Immigration officers;
- implementation of the first stage of a Cost Recovery plan in offices in Canada and overseas;
- implementation of a Personal Alarm Security System (PASS) at offices in Canada;
- cooperation with External Affairs in the development of a Computer Assisted Immigration Processing Systems (CAIPS) for overseas offices;
- liaison with Revenue Canada in the development of their Inspection Services Information System (ISIS); and
- meetings with representatives of foreign governments regarding the development of a machine-readable passport.

New Employment Expansion and Development (NEED) Program	-	-	62
Total	33,863	31,863	27,849

B. Cost Analysis

The 1985-86 Estimates for the Immigration Program include only those expenditures to be charged to the Commission/Department's voted appropriations and statutory payments. Other items must be included when describing the Program on a full cost basis. Other costs are for accommodation provided by Public Works Canada ($9,926,000), surgical-medical insurance ($1,493,000), provision of accommodation at various Canadian airports by Transport Canada ($1,249,000), and other miscellaneous services provided free by other government departments ($1,018,000). The revenues shown consist of recovery of deportation expenses, fines and forfeitures, and other revenues.

Immigration will be implementing user fees, estimated at $3.4 million, for immigration services to partially offset its operating costs. These fees will not have the incidental effect of limiting access to Canada of legitimate visitors and immigrants.

Figure 31: Net Cost of Program by Activity ($000)

	Expenditures 1985-86	Add Other Costs	Total Cost	Deduct Revenue	Net Cost 1985-86	Total 1984-85

Total	125,571	13,686	139,257	7,000	132,257	130,834

C. Immigration Overview

1. Background and Objectives

The Immigration Act, 1976 which came into effect in April 1978, resulted from a complete re-examination of Canada's immigration policy. Consultations were held with Canadian individuals, groups, organizations, and with provincial authorities, because immigration is a concurrent federal-provincial responsibility. Under this Act and its Regulations, the Commission/Department's main immigration objectives are:

- to facilitate the admission of immigrants in order to promote Canada's domestic and international interests, recognizing the need for family reunification, non-discrimination, concern for refugees and the promotion of Canada's economic, social, demographic and cultural goals;
- to protect the health, safety and good order of Canadian society;
- to facilitate the entry of visitors for the purpose of fostering trade and commerce, tourism, cultural and scientific activities and international understanding; and
- to encourage and facilitate the adaptation of newly-arrived immigrants.

2. Immigrant Categories

Immigrants are admitted under one of the following three classes.

Family: These immigrants must be sponsored by a close relative who is at least 18 years old and currently living in Canada as a permanent resident or citizen.

Independent immigrants: This class includes independent applicants, relatives who are assisted but not classed as family, entrepreneurs, retired persons, those who intend to be self-employed, workers, and any others who apply at Canadian government offices abroad to immigrate on their own initiative.

Refugees: The people must qualify as refugees in accordance with the definition of a Convention refugee set down in the Immigration Act of 1976. A yearly refugee plan, included in the Annual Report to Parliament on Immigration Levels, enables Canada to plan its admission of refugees and other people admitted for humanitarian reasons within the context of predetermined levels of annual immigration, as required by the Immigration Act. It specifies the number of refugees or members of designated classes Canada will admit during the calendar year, and the areas of the world from which they will come. Specific allocations are determined through consultations with the Canadian representative

of the United Nations High Commissioner for Refugees, the provinces, and private groups devoted to assisting refugees. Only refugees who are assisted by the federal government are included in the plan; refugees sponsored by private groups in Canada are additional.

The Immigration Program also oversees the entry of the millions of people entering Canada yearly as visitors and temporary workers.

3. Location of Immigration Services

In order to fulfill its mandate, the Immigration Program provides services in the following locations:

Overseas: Responsibility for immigration is assumed overseas through the Department of External Affairs. This entails interviewing prospective immigrants and processing applications as well as dealing with students, workers and tourist applications for temporary entry. Visitor visas are also issued.

At ports of entry: People arriving in Canada as immigrants are "landed" by immigration officers at ports of entry. Examination of visitors, including foreign students and temporary workers, are also conducted.

Within the community: Canada Immigration Centres (CICs), in 106 locations across Canada, act as the major source of immigration information. In consultation with the Canada Employment Centres (CECs), they may provide information to employers in Canada on entry requirements for foreign workers. The CEC transmits information on employment opportunities in Canada to Canadian visa offices abroad for use in immigration counselling and selection procedures. The CIC also administers the Refugee Sponsorship Program.

4. Immigration Program Activities

Immigration services are established and provided through the following activities.

Recruitment and Selection: This activity involves management and support of the recruiting, processing, movement and initial reception of immigrants and non-immigrants (temporary workers, foreign students and tourists.)

Settlement: Under this program, immigrants, including refugees, are given assistance to adapt to social, economic and cultural life in Canada. Assistance is provided through the Adjustment Assistance Program, the Immigrant Settlement and Adaptation Program and the Transportation Loan Program.

Enforcement: This activity provides for the protection of Canadians against undesirable non-Canadians through enforcement of the Immigration Act.

Adjudication: Persons who are allegedly in contravention of the Immigration Act and Regulations are given a fair and impartial hearing to determine whether or not they will be allowed to enter or remain in Canada. The Adjudication Directorate ensures that inquiries and release hearings are conducted fairly and efficiently in accordance with rules of natural justice and the Immigration Act and Regulations.

Refugee Status Advisory Committee (RSAC): As a signatory to the Geneva Convention of 1951 and its subsequent protocol, and in accordance with Section 47(3) of the Immigration Act of 1976, Canada is obligated to allow individuals who are legally in the country to remain here, if they fulfill the definition of refugee shown in the Immigration Act, 1976. RSAC panels consider each refugee claim individually and provide recommendations to the Minister or his/her delegates on whether or not the claimant ought to be determined a Convention refugee. Guidance and assistance are also provided to field offices.

Summary and Balance of the Account 5-19

Section I
Unemployment Insurance Account Overview

A. Description of the Account

1. Introduction

The Unemployment Insurance (UI) Account has been established within the Consolidated Revenue Fund to record all transactions related to the UI Program. The UI Program is a compulsory and contributory social insurance program which provides temporary income support to unemployed workers while they seek employment or are unable to work because of sickness, disability, pregnancy or adoption. In 1983, approximately 10.8 million Canadians contributed to the program, and there were approximately 3.4 million beneficiaries.

2. Benefits

Benefits may be claimed for unemployment, sickness, maternity, or adoption, at age 65, and for work sharing, job creation and training. The benefit rate is calculated at 60 per cent of the claimant's average weekly insurable earnings. The duration of benefits is normally dependent upon the length of the claimant's insured employment and the regional rate of unemployment where the claimant resides. Benefits are described more fully in Section II, pages 5-8 to 5-12.

3. Administration

While the UI Act specifies that the Minister of Employment and Immigration is responsible for reporting on the operation and status of the Unemployment Insurance Program, the administration of the program is shared between the CEIC/D and the Department of National Revenue (Taxation), which is solely responsible for the collection of premium contributions and benefit repayments and for the decisions concerning the insurability under the Act. The costs incurred in administering the Act are provided by the UI Account and financed through employee/employer premium contributions.

4. Government Contributions

The federal government contributes to the Unemployment Insurance Program. Currently, government contributions consist of all regionally extended benefits (benefits that are extended in economic regions having unemployment rates in excess of 4.0 per cent); all extension benefits paid under Section 38 (job creation benefits) and Section 39 (training benefits); and net benefits (benefits less premiums collected) paid to self-employed fishermen. Only the government's statutory contributions on a fiscal year basis are included in the Commission/Department's budgetary requirements/expenditures. However,

when expenditures exceed revenues, additional requirements, defined as advances, are acquired from the Consolidated Revenue Fund. Advances are repayable to the government and are treated as non-budgetary requirements of the federal government in the year when the advances are made.

5. Premium Contributions

Most employees under the age of 65 must contribute to the program. Premium contributions are determined based on the employee's insurable earnings which are his/her earnings up to a maximum. The premium rate, which is a percentage of the employee's insurable earnings, is set annually by the Commission. The employers contribute 1.4 times their employees' contributions. However, employers with approved wage loss insurance plans are entitled to premium reductions, which are subsequently shared with their employees.

B. Financial Summary

The Unemployment Insurance Account can be summarized on a calendar-year basis as follows:

Figure 1: Summary of the UI Account ($ millions)*

	1985	1984	Change	1983
Benefit payments	10,186	9,986	200	10,169
Overpayments and cancelled warrants	(63)	(66)	3	(60)
Benefit repayments	(60)	(63)	3	(46)
Net benefits	10,063	9,857	206	10,063
Administration	901	906	(5)	818
Bad debts	6	6	-	5
Net interest	564	455	109	409
Penalties	(11)	(12)	1	(10)
Total cost	11,523	11,212	311	11,285
Less:				
Government contributions	2,710	2,895	(185)	2,811
Premium revenue	8,624	7,652	972	7,017
Current surplus/(deficit)	(189)	(665)	476	(1,457)
Cumulative surplus/(deficit)	(4,708)	(4,519)	(189)	(3,854)

*This presentation differs from that used by the Minister of Finance, as interest is included on an accrual basis rather than a cash basis.

C. Highlights of Financial Changes

- Benefits and administrative costs in 1985 are expected to remain at approximately the same level as in 1984.
- Premium revenue is expected to increase by 13 per cent in 1985, compared to a 9 per cent increase in 1984.
- Government contributions are expected to decrease by 6 per cent in 1985, mainly due to savings expected from administrative changes.
- The deficit in the account is expected to increase by $189 million and reach $4,708 million by the end of 1985.

D. Financing Mechanism

As stipulated in the UI Act, the UI Program is designed to finance administrative costs and benefit costs (excluding those for which the government is responsible) through premium contributions. Since benefit costs vary significantly from year to year, the Act requires the Commission to review the financial status of the Account in consultation with the Minister of Finance and, with the approval of the Governor in Council, fix the premium rates each year.

The premium rates shall be set based on the ratio, calculated over three years, of average costs to total insurable earnings, adjusted to remove or reduce the account deficit or surplus that would otherwise occur. For 1985, the three-year average costs to total insurable earnings ratio was calculated to be 2.32 per cent of the weekly insurable earnings for employees. The current state of the account requires that the premium rate be increased. However, a large increase in the premium rate would have an impact on employment and economic activity. Therefore, the premium rate for 1985 is kept as close as possible to the minimum rate required by the Act, i.e., 2.35 per cent of insurable earnings, to keep private sector costs to a minimum and encourage employment. The employer rate, calculated at 1.4 times the employee rate, will be at 3.29 per cent of the employee's insurable earnings.

The premium rate for employees and the balance of the Account are summarized as follows:

Figure 2: Surplus (Deficit) and Premium Rate

	1985	1984	1983	1982
Annual surplus (deficit) ($ millions)	(189)	(665)	(1,457)	(2,728)
Cumulative surplus (deficit) ($ millions)	(4,708)	(4,519)	(3,854)	(2,397)
Premium rate - Employees (% of insurable earnings)	2.35	2.30	2.30	1.65

E. Current Issues

The financial requirements for 1985 are determined based on the current UI legislation plus a number of changes related to the determination of eligibility for benefits as announced by the President of the Treasury Board. These changes include the treatment of separation payments and employment pensions as earnings and a reduction from a six-week to a three-week maximum in the extension of benefits payable to claimants who complete a job training course or a job creation project.

Section II
Unemployment Insurance Benefits

A. Introduction

UI benefits are paid to workers who meet the requirements specified by the Unemployment Insurance Act and Regulations. Claimants are required to show by their record of employment that they have worked at insurable employment for a certain number of weeks in their qualifying period (the past 52 weeks or since the start of their last claim for benefit, whichever is shorter). The required number of weeks of insurable employment varies depending on the type of claim (see Description of Benefits, below), and the unemployment rate in his/her region.

After a two-week waiting period, claimants will receive benefits at 60 per cent of their average weekly insurable earnings up to a maximum. (The average is based on earnings in the last 20 weeks of work in the qualifying period, or less if the claimant does not have 20 weeks of insured employment). Claimants receiving regular benefits are allowed to have earnings from other employment up to 25 per cent of their benefit rate without affecting the amount of benefits. However, claimants receiving sickness, maternity and adoption benefits will have 100 per cent of their earnings from other employment deducted from their benefits. Effective April 1, 1985 all monies received at separation will be considered as earnings for determination of benefit eligibility, except in the case of those employees who as of December 31, 1984 benefitted from formal labour management agreements providing for severance pay. This transitional clause applies only until the end of the labour management agreements. The treatment of pension income as earnings will come into effect starting in January 1986.

The types of UI benefits, terms of eligibility, and duration are described below.

B. Description of Benefits

1. Regular Benefits

Eligibility: To qualify for regular benefits, claimants must have worked at insurable employment for 10 to 14 weeks during their qualifying period. This "variable entrance requirement" is determined by the rate of unemployment in the region where the claimant lives.

The terms are different for repeaters, defined as claimants who received benefits for more than 10 to 14 weeks in the qualifying period. They are required to have at least the same number of weeks of insured employment as weeks of benefit drawn up to a maximum of 6 weeks in addition to the 10-14. The repeater provision is waived where the regional unemployment rate is over 11.5 per cent.

Other categories of claimants are new entrants and re-entrants. A new entrant or re-entrant is one who has less than 14 weeks of insurable employment and/or benefits paid, during the 52-week period prior to the qualifying period. These claimants must have at least 20 weeks of insurable employment in the qualifying period in order to be eligible for benefits.

All unemployed workers who apply for regular benefits must also be available, capable and actively seeking employment.

Duration: Claimants may receive benefits for a maximum of 50 weeks. The weeks of entitlement to benefits are divided into three phases:

Initial phase: Claimants are entitled to one week of "initial benefits" for every week of insurable employment in their qualifying period up to a maximum of 25 weeks.

Labour force extended: If claimants have more than 26 weeks of insurable employment, they may claim one week of benefit for every two weeks of employment in excess of 25 (up to a maximum of 13 weeks). For example, a person having 27 weeks of employment can claim one extra week of benefits; a person having 29 weeks of employment can claim an extra two weeks of benefits, and so on.

Regionally extended: When the "initial" or "labour force extended" phases have been exhausted, claimants are entitled to further benefits based on the unemployment rate in their region. For every 0.5 per cent increment in the regional unemployment rate in excess of 4.0 per cent, claimants may receive an additional two weeks of benefits up to a maximum of 32 weeks.

2. Special Benefits

In addition to regular benefits, there are benefits paid in cases of sickness, maternity, adoption, and at age 65. Terms for entitlement to these special benefits differ from the terms for regular benefits. Claimants must have at least 20 weeks of insurable employment during the qualifying period.

Sickness, Maternity and Adoption Benefits: Claimants who have 20 weeks of insurable employment and a medical certificate or proof of adoption are entitled to 15 weeks of sickness or maternity or adoption benefits. Claimants with less than 20 weeks may be able to get some weeks of illness benefits, when sickness is not the direct cause of unemployment. Beginning January 1, 1984, adoptive parents may claim a maximum of 15 weeks benefit. These benefits are counted as reductions in over-all entitlement to regular benefits.

Age 65 Benefits: Claimants who have 20 weeks of insurable employment and reach 65 years of age are entitled to a three-week benefit without having to leave their employment.

3. **Fishermen's Benefits:**

Benefits may be claimed by the self-employed fishermen, in accordance with the following terms:

Year-round fishermen: To qualify, claimants must have at least 20 weeks of insurable employment as fishermen, with at least six insurable weeks of fishing in each of any three consecutive calendar quarters, and with their most recent employment in fishing being on a designated vessel. Their entitlements are similar to those of a regular claimant.

Seasonal fishermen: To qualify, claimants must have the usual 10 to 14 weeks of insurable employment in their qualifying period, including at least six insurable weeks of fishing. The benefit rate for fishermen with 15 or more weeks of insurable employment is calculated based on 60 per cent of the average of the highest 10 weeks of insurable earnings. The duration of benefits is equivalent to 5/6 of their weeks of insurable employment. For example, if they have 18 weeks of insurable employment, they would receive 15 weeks of benefits. When the basic entitlement is exhausted, they can receive regionally extended benefits. For winter fishermen, seasonal fishing benefits may be claimed for weeks that fall within the period from May 1 to November 15, and for summer fishermen, for weeks between November 1 to May 15.

4. **Work Sharing, Job Creation and Training Benefits:**

Claimants may receive benefits while on work sharing agreements, job creation projects, or training courses. Payment under these three benefit schemes are subject to a financial ceiling approved by the Governor in Council.

Work Sharing: Work sharing agreements between CEIC/D and employers are designed to avoid lay-offs, through the use of UI benefits as alternative income support. For example, a firm facing a 20 per cent reduction in production would normally plan to lay off one-fifth of its work force. Through work sharing the company could employ its total work force four days per week. The reduction from 40 hours to 32 hours a week would cut production by the required 20 per cent without reducing the number of employees. The company would pay its employees for the hours they worked, while UI benefits would be paid for the day the workers were not working. The two-week waiting period is deferred for work sharing claimants and earnings from work sharing employment will not affect the benefit rate, which is calculated based on the percentage of work reduced.

Job Creation and Training Courses: Claimants participating in job creation projects or taking approved training, whose entitlements are not enough to cover the duration of these activities, may have their entitlements extended to the end of the projects or courses, and also receive an additional maximum of three weeks of benefits after the projects or courses end, for the purpose of obtaining employment.

However, the maximum length of the benefit period for job creation claimants is 58 weeks, and for claimants attending training courses it is 104 weeks. It should be noted that the entitlement extensions do not apply to claimants participating in the Youth Training Option and the Career Access Program. Claimants on job creation projects may receive weekly benefits to a maximum of $315 in 1985. Claimants under the Career Access Program may receive weekly benefits up to $60 higher than their weekly benefit amounts. For claimants taking approved training courses, their weekly benefits may be set in accordance with the basic allowance rates established under the National Training Act, if the allowance rates are higher than their benefit rates.

C. Financial Requirements

The following figure shows the forecast financial requirements for each of the benefit types.

Figure 3: Forecast Benefit Payments by Type ($ millions)

	1985	1984	Change	1983
Regular	8,848	8,827	21	9,069
Sickness	219	205	14	179
Maternity	430	396	34	344
Adoption	4	3	1	-
Age 65/Retirement	20	19	1	19
Fishermen	192	163	29	142
Work sharing (Section 37)	45	32	13	83
Job creation (Section 38)	143	115	28	107
Training (Section 39)	285	226	59	226
Total	10,186	9,986	200	10,169

D. Environment

The current recovery is continuing, but at only a moderate pace. In 1985, only modest improvement in the reduction of unemployment is expected, as the expected weaker growth in real output will dim the prospects for substantial employment gains. The expected reduction in unemployment will result in lower regular benefits paid.

However, UI benefits are also determined by individual claimants' insurable earnings, which are directly related to their employment earnings. Increases in wages and salaries and the maximum weekly benefit will result in higher benefits paid. The following figure shows the maximum weekly benefit and average weekly benefit.

Figure 4: Weekly Unemployment Insurance Benefits ($/Week)

	1985	1984	1983
Maximum	276	255	231
Average	167	160	154

The increases in special benefits, such as sickness, maternity, adoption, and age 65/retirement, basically reflect the increases in the number of claims allowed, as the insured population expands, and the increases in the average weekly benefits. An additional factor for adoption will be the increased usage of this new program.

For work sharing, job creation and training benefits, the annual financial ceilings as authorized by orders of the Governor in Council are used in the 1985 forecast.

Section III
Administrative Costs

A. Introduction

Sections 63 and 135 of the UI Act specify that the costs of administering the Act shall be charged to the UI Account and financed by employee and employer premium contributions. Since the Canada Employment and Immigration Commission and Department are administering different programs, the costs of administration of the UI Act have to be separately identified.

B. Method of Calculation

The calculation of UI administrative costs begins with identifying the costs of those activities of the Commission/Department directly related to the UI Act. Administrative costs of the Immigration Program, the Annuities activity, and job creation programs are excluded from the calculation. For those activities such as training programs, general administration, and the Department, the UI portions of the administrative costs are calculated on a pro-rata basis.

For the fiscal year 1985-86, the UI administrative costs as compared to the total administrative costs of the Department and Commission are as follows:

Figure 5: Comparisons of the 1985-86 Administrative Costs of the UI Portion and Department/Commission Totals ($ millions)

	Department/Commission	UI Portion
Corporate and Special Services Program	286	244
Employment and Insurance Program	740	660
Immigration Program	92	-
Total	1,118	904

Since the actual costs of the Commission/Department are finalized on a fiscal year basis and only available when Public Accounts are finalized, the administrative costs on a calendar year basis for UI Account purposes are calculated as 9/12 of the amount for a fiscal year, plus the 3/12 of the amount for the previous fiscal year.

However, Section 132(2)(b) of the UI Act provides that all amounts collected by the Commission for services rendered shall be credited to the UI Account. Therefore, for each year, the amount of administrative costs in the UI financial statements represents the gross amount determined by the above-mentioned calculation less the amounts recovered.

C. Financial Requirements

The following figure shows the amount charged to the UI Account for administering the Act for the respective calendar year.

Figure 6: UI Administrative Costs ($ millions)

	1985	1984	Change	1983
Gross	907	912	(5)	823
Recoveries	(6)	(6)	-	(5)
Net	901	906	(5)	818

UI administrative costs are expected to decrease by about $5 million in 1985.

Section IV
Government Contributions

A. Introduction

Pursuant to Sections 136 and 146 of the Unemployment Insurance Act, the federal government shares part of the benefit costs of the Unemployment Insurance Program. They are referred to as the Government Contribution to the Unemployment Insurance Account and the Government Contribution to Fishermen's Benefits in the Department/Commission's Estimates. Government contributions in 1983 amounted to $2.8 billion, which is equivalent to 28 per cent of the total benefits paid.

B. Description of Government Contributions

1. Government Contribution to the Unemployment Insurance Account

The Government Contribution to the Unemployment Insurance Account is in accordance with Section 136 of the Act, which defines the Government cost of paying benefits as extended benefits paid under Section 35, Subsections 38(8) and 39(3).

Extended benefits paid under Section 35 are benefits paid to claimants who have exhausted their initial benefits (or labour force extended benefit, if they are entitled) and who reside in a region where the regional unemployment rate exceeds 4.0 per cent. For each 0.5 per cent increment in the regional unemployment rate, the claimant's entitlement will increase by two weeks up to a maximum of 32 weeks.

In accordance with Subsections 38(8) and 39(3) of the Act, claimants on job creation projects (Section 38) or training courses (Section 39), whose entitlements are not enough to cover the duration of the projects or courses, may have their entitlements extended to the end of projects or courses plus an additional maximum of three weeks of entitlement after the projects or courses end (no extensions are provided to claimants under the Youth Training Option or the Career-Access Program). All these extended benefits are included in the calculation of the government contribution.

2. Government Contribution to Fishermen's Benefits

Section 146 of the Act requires the federal government to finance all benefits paid to self-employed fishermen and to retain all premiums paid by them and their designated employers (buyers). The net fishing benefits are referred to as the Government Contribution to Fishermen's Benefits in the Commission/Department's Estimates.

C. Financial Summary

The following figure shows a financial summary of the two Government contributions on a fiscal year basis as presented in Part II of the Estimates.

Figure 7: Government Contributions ($ millions)

	Estimates 1985-86	Forecast 1984-85	Change	1983-84
Unemployment Insurance Account	2,422	2,719	(297)	2,714
Fishermen's Benefits	194	164	30	140
Total	2,616	2,883	(267)	2,854

Total Government contributions are expected to decrease to $2,616 million in 1985-86 from the forecast of $2,883 million in 1984-85. As indicated above the decrease will mainly occur in the Government Contribution to the UI Account, (regionally extended benefits).

The decrease in the Government contribution is mainly the result of the $254 million savings expected in 1985-86 from the changes discussed on page 5-7.

The projected fishermen's benefits to be paid and premiums are based on the average increase in fishermen's claims and contributions, and the average insurable earnings observed in the last several years.

Section V
Premium Revenue

A. Introduction

Unemployment Insurance premiums must be paid by the covered employees based on their weekly insurable earnings which is their normal wage or salary up to a maximum. Employers are required to contribute 1.4 times their employees' premiums, unless they have an approved wage loss insurance plan.

Premium revenue from employees and employers is collected by Revenue Canada (Taxation) through their income tax collection systems. The amount transferred to the Unemployment Insurance Account in a year is an estimate of the premiums which can be collected in that year. This amount is finalized when the income tax returns are filed and processed the following year.

B. Financial Summary

Premium revenue in 1985 could amount to $8,624 million which is an increase of $972 million from the $7,652 million received in 1984.

Figure 8: Premium Revenue Receipts ($ millions)

	1985	1984	Change	1983
Premium revenue	8,624	7,652	972	7,017

C. Variables Affecting Premium Revenue

The reasons for the increase in the premium revenue in 1985 are further explained below:

1. Number of Contributors

The number of persons employed in 1985 is expected to increase by about two per cent. The number of contributors will therefore increase by a similar percentage in 1985.

2. Average Insurable Earnings

Average weekly insurable earnings are expected to increase by about six per cent in 1985 which is a result of the following two factors. First, the Act requires that the maximum weekly insurable earnings be escalated annually in accordance with an earnings index for that year. In 1985, the maximum weekly insurable earnings will be increased to $460 from $425 per week. This increase will apply to those employees

whose earnings are at or above the maximum. Second, since insurable earnings are directly related to employee's earnings, increases in wages and salaries also contributed to the increase in average weekly insurable earnings. This applies to those employees whose earnings are below the maximum.

3. Premium Rate

In 1985, the premium rate for employees will be increased to 2.35 per cent of the weekly insurable earnings from 2.30 per cent in 1984. The premium rate for the employers, calculated at 1.4 times the employee rate will then be 3.29 per cent of the employee's insurable weekly earnings.

4. Premium Reduction

Employers with qualified wage loss insurance plans are entitled to premium reductions. Employers are required to share this reduction with their employees. The total amount of premium reductions is expected to increase from $301 million in 1984 to $328 million in 1985.

Figure 9: Premium Rate and Insurable Earnings

	Employee Premium Rate	Employer Premium Rate	Maximum Weekly Insurable Earnings	Maximum Weekly Premiums	
				Employee	Employer
1983	2.30%	3.22%	$385	$8.86	$12.40
1984	2.30%	3.22%	$425	$9.78	$13.69
1985	2.35%	3.29%	$460	$10.69	$14.97

Section VI
Summary and Balance of the Account

In summary, benefits paid in 1985 could reach $10,186 million. Total costs including administration and interest could be in the vicinity of $11,523 million.

With estimated government contributions of $2,710 million and premium revenue of $8,624 million, there will be a deficit of $189 million for the 1985 operation. This will result in a cumulative deficit in the Account of $4,708 million by the end of 1985. The deficit will be financed by additional advances from the Consolidated Revenue Fund to a total outstanding of $3,600 million. The difference between the cumulative deficit and the outstanding advances can be explained by unredeemed benefits and interest payable on the outstanding advances.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Energy, Mines and Resources Canada

Preface

This Expenditure Plan is a reference document containing levels of detail to meet the various needs of its audience.

There are four chapters in this document. The first chapter provides an introduction to the Department while the other three present the Program Expenditure Plans for each of the Department's Programs.

Chapters 2 to 4 begin with extracts from Part II of the Estimates for the Program being described. This is to provide continuity with the other Estimates documents. It is to be noted that only the Minerals and Earth Sciences Program is providing performance information in these 1985-86 Estimates; for this Program, extracts from Volume II of the Public Accounts are also provided.

Each Program Expenditure Plan is divided into three sections. Section 1 presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the bases for the resources requested. Section III provides further information on costs and resources as well as special analyses that the readers may require to understand the Program more fully.

This document permits easy access to specific information that the readers may require. A general table of contents lists the various chapters, and a detailed table of contents is provided for each Program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references throughout the document allow the readers to find more details on items of particular interest.

Departmental Summary

Historical Roles and Responsibilities

Although the Department is comparatively new, some of its components date to pre-Confederation days. The Geological Survey of Canada (GSC), the oldest scientific organization in Canada, was founded in 1842, by Sir William Logan, to determine the extent of Canada's natural resources. The Surveys and Mapping Branch had its beginning in 1857. It has been primarily responsible for providing a comprehensive survey of Canada as a basis for discovery, settlement, resource development and defence.

It was the formation of the Department of the Interior, in 1873, however, that marked the first stage of development of Energy, Mines and Resources, Canada (EMR). GSC and Surveys and Mapping were brought into this Department, which then had the responsibility for administering all federal lands and natural resources in Western Canada and in the Far North. Following the growth and settlement of the West and the transfer of control of public lands and natural resources to the Prairie Provinces, the raison d'être for the Department of the Interior no longer existed, and it was abolished in 1936. It was replaced, in part, by the Department of Mines and Resources organized into five branches: Mines and Geology; Lands, Parks and Forests; Surveys and Engineering; Indian Affairs; and Immigration.

In 1949, the Department of Mines and Resources was succeeded by two new Departments: Resources and Development, and Mines and Technical Surveys (M&TS). The latter was made up of segments of other departments having bases in earth sciences plus astronomy, and including the Mines Branch, Geological Survey of Canada, Surveys and Mapping, Dominion Observatories, and the Geographical Branch.

Under the Government Organization Act of 1966, EMR was established as the federal government's principal agency, under direction of the Minister, for co-ordinating, promoting and recommending national policies and programs with respect to energy, mines and minerals, water and other resources, and conducting related studies, research and investigations.

Subsequently, the Astronomy Division of the Observatories Branch was transferred to the National Research Council, and the Branch was renamed Earth Physics. Under Energy, a new Branch, Resource Management and Conservation, was created, and the Water Sector transferred to Environment Canada.

Since 1966, EMR has gone through several reorganizations, most particularly in the Energy Sector. These changes were necessitated, in part, by the release of the government's National Energy Program (NEP) in 1980. As a consequence, a new and expanded infrastructure was required to implement this new Program.

There are now two operational Programs (Energy, and Minerals and Earth Sciences) and a supportive Program (Administration) in the Department. Their main responsibilities complement the broad policy objectives and initiatives of the Economic and Regional Development Envelope of the Cabinet Committee on Economic Regional Development. These responsibilities are discussed in the following chapters.

Organization and Programs

Departmental Priorities

The Department's principal areas of emphasis for short-term and medium-term priorities are listed below.

Short-Term Priorities: Two are identified.

- Continue to assess energy programs and, where necessary, make adjustments to ensure maximum efficiency and effectiveness in meeting the energy objectives of Canada.

- Continue to work toward federal-provincial energy agreements and mineral development agreements, to achieve Canada's goals related to energy, economic and regional development.

Medium-Term Priorities: The priorities of the Department, outlined above, also extend into the medium- and, in some cases, long-term planning periods. Over the medium-term, the Department will address the following priorities.

- Ensure that its research and technology activities not only continue to provide technical implementation of the energy and mineral policies of the government but also support the regional development, technological innovation, and space policies.

- Ensure that the activities of the Department can provide the scientific and technical information and expertise required to

meet the economic, security, safety and scientific needs of the nation related to earth sciences.

- Ensure continued exploration and development for oil and gas in Western Canada, frontier and offshore areas, with due regard for the economic, social and environmental impacts of such activities.

- Develop and implement policies and programs to enhance export markets for Canada's mineral and energy resources.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested to spend $40,877,600 for the operation of the Administration Program during the 1985-86 fiscal year. Of this amount, $49,416,600 is required for operating expenditures and $395,000 for capital expenditures. Revenue totalling $8,934,000, received during the fiscal year, will be credited to the Vote and will reduce the total funding required. An estimated $3,305,000 for the Minister's salary and motor car allowance, and contributions to employee benefits will be met under existing statutory authority.

Section I
Program Overview

A. Highlights

The highlights of the Administration Program for 1985-86 are described below. Details are discussed in the Background and Planning Perspective portions of this Section, and in the Analysis by Activity Section, starting on page 2-12.

- To continue progress of the Four-Year Strategic Plan on Francophone Participation in the Scientific and Professional Category, to a target of 14.6% representation by March 1987, at a cost of $511,000.

- To act on the recommendations/results of the Affirmative Action Workforce and systems audit, starting April 1985 and ending March 1988.

- To complete two pilot projects relating to the automation of departmental policy and procedures manuals, and of departmental records indexes; and access to information and privacy procedures. The pilot projects were jointly sponsored and financed by the Department of Communications, Supply and Services Canada and EMR. This Department will be paying approximately $190,000 in 1985-86 of the total amount of $1,900,000 allocated to these projects.

- To continue the development of four volumes of the new departmental Administrative Policies and Procedures Manual covering property planning and management, material management, information management, security and occupational health and safety, at a cost of $310,000 in 1985-86.

- To complete the implementation of the Financial and Managerial Information Systems (FAMIS) (improving utility and timeliness, and reducing production cost), throughout the Department, for approximately $100,000 in 1985-86.

- To advertise programs in support of Home Energy Planning, use of natural gas as an alternative fuel and the launching of the new "Canadian Atlas."

- To produce a film treating the scientific support provided by the Department in the search for offshore resources.

- To distribute a multi-media kit aimed at primary school children to explain the various sources of renewable and

non-renewable energy; and to distribute, through schools, a film strip explaining the dangers of explosives.

- To produce a photo story-book to commemorate the 25th anniversary of the Polar Continental Shelf programs.

- To complete a series of policy papers dealing with media relations, exhibits, advertising, audio-visual and publications activities throughout the Department.

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For details see page
Direction and Co-ordination	7,565	7,480	85	2-12
Finance and Administration	17,864*	17,867*	(3)	2-14
Human Resources Management	4,719	4,771	(52)	2-18
Communications	14,035	17,498	(3,463)	2-21
Totals	44,183	47,616	(3,433)	
Authorized person-years	684	678	6	2-24

* These amounts include revenues credited to the Vote. See page 2-26.

The resources shown in the Forecast column have been revised to reflect the transfer to the Administration Program of resources associated with public information activities previously included in the Energy and Minerals and Earth Sciences Programs.

Explanation 1985-86 Changes: The 1985-86 estimated expenditures of $44.2 million represent a decrease of approximately $3.4 million (or 7%) from the 1984-85 forecast. The decrease is made up of the following items:

	($ millions)
• For all activities' general inflation increases related to personnel costs only	0.4
• Increased resources to develop long range accommodation plan	0.7
• Departmental portion of general reduction in advertising budgets announced on November 8, 1984	(3.5)
• Miscellaneous	(1.0)
Total:	(3.4)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $47.6 million or 72% higher than the 1984-85 Main Estimates of $27.7 million (Extracts from Part II of the Estimates, page 2-4). The difference of $19.9 million reflects the following offsetting items:

	($ millions)
• Realignment of the Communications Activity's costs from the Energy Program and MESP	17.5
• Increased resources for tenant services' projects, approved in Supplementary Estimates (B)	0.5
• Realignment of the Finance and Administration Activity's costs from the Energy Program and MESP	1.6
• Miscellaneous	0.3
Net Change:	19.9

C. Background

1. Introduction

The Administration Program provides management direction, policy, advice and comprehensive management support systems and services to the two operational Programs.

The Program encompasses the Ministers' and the Deputy Minister's Offices and the Office of Environmental Affairs. In addition, it provides common departmental services: administration, computer services, official languages, personnel, finance, internal audit, program evaluation, strategic planning, central departmental library and communications.

2. Legal Mandate

The mandate for the Administration Program is based on the legislative authority of the Department of Energy, Mines and Resources Act and the Resources and Technical Surveys Act. Other acts and instruments administered in whole or in part through the organizations in the Administration Program are the:

Access to Information Act;
Financial Administration Act;
Official Languages Act;
Privacy Act;
Public Service Employment Act;
Public Service Staff Relations Act; and
National Film Act.

Figure 2: 1985-86 Resources by Organization/Activity ($000)

					TOTALS $
Direction and Co-ordination	7,565				7,565
Finance and Administration		17,864			17,864

Communications				14,035	14,035
TOTALS	7,565	17,864	4,719	14,035	44,183
PERSON-YEARS	115	357	105	107	684

3. Program Objective

The objective of the Administration Program is to provide managerial direction and financial, administrative, electronic data processing, human resources and communications support for the achievement of federal and departmental objectives in the fields of energy, minerals and earth sciences.

4. Program Organization for Delivery

Activity Structure: The Departmental Administration Program consists of the four Activities shown in Figure 2. This reflects a change from the two Activities (Corporate Management and Common Services) shown in 1984-85. All figures used in this document for previous years have been revised to reflect the new structure. Details of the Program structure below the Activity level are included in Section II, Analysis by Activity, starting at page 2-12.

Organizational Structure: The Program is composed of four major organizational units: Corporate Headquarters, the Finance and Administration Sector, the Human Resources Sector and the Communications Branch. Figure 2 shows the relationships between the resources being requested for 1985-86 and the organizational and Program/Activity structures.

It should be noted that the resources shown under the Finance and Administration Sector and the Human Resources Sector do not reflect the total financial, administrative or personnel resources of the Department. The staff shown in these two Sectors provide direction and advice to support staff in line organizations. They are located with the organizations they serve in order to maintain the quality of the support services provided. The person-years for these staff are shown on pages 2-15 and 2-19.

D. Planning Perspective

1. Environment

This Program responds to factors influencing the two operational Programs (Energy, and Minerals and Earth Sciences), responsibilities delegated to the Ministers and/or the Deputy Head (e.g., official languages, affirmative action, etc.), and the requirements of central agencies. These factors are discussed in Chapters 3 and 4.

2. Program Effectiveness

The Administration Program provides centralized management and support services to the Department. As a consequence, the Program contributes directly to the effectiveness, efficiency and economy of the two operational Programs. These attributes are discussed in Chapters 3 and 4. From a performance standpoint, however, the Program can be measured in terms of the expenditures of the two operational Programs as shown in Figure 3.

Figure 3: Departmental and Administrative Operating Expenditures ($ Millions) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Section II
Analysis by Activity

A. Direction and Co-ordination

Objective

To direct and co-ordinate the federal and departmental program objectives; to achieve federal goals by pursuing the departmental mission; and to manage allocated resources.

Resource Summary

This Activity accounts for approximately 17% of the total Program expenditures and approximately 17% of the total person-years.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Departmental Management and Support	4,805	82	5,933	79	3,456	71
Corporate Planning	506	6	308	6	525	5
Program Evaluation	1,130	10	481	10	573	6
Internal Audit	1,124	17	758	17	865	15
	7,565	115	7,480	112	5,419	97

Of the total expenditures, 66% is for personnel costs and 34% for operations and maintenance.

Description

The Administration Program supports the Offices of the Ministers, Deputy Minister and Associate Deputy Minister. The introduction of the Policy and Expenditure Management System has necessitated the creation of a separate organization within the Department to address strategic planning and central agencies' liaison. This Corporate Planning Group provides the departmental focus for program evaluation and internal auditing.

Performance Information/Resource Justification

The person-years in this Activity will do the following tasks in 1985-86.

Corporate Planning (6 P-Y)

- To provide support to the Department through the co-ordination and preparation of Strategic Overviews; briefing material for the Ministers; and analyses on government programs.

- To complete development of and maintain a corporate planning process.

Program Evaluation (10 P-Y)

- To develop evaluation assessments for the Petroleum Sources and Emergency Planning Activities, Electrical Energy sub-activity and for the Industrial Conversion Assistance Program.

- To complete five Program evaluations:

  - Coal Utilization
  - Federal Energy Management
  - Natural Gas and Liquids
  - Petroleum Incentives Program
  - Industrial Conversion Assistance Program.

- To co-operate in the development of evaluation frameworks for new programs as these arise.

Internal Audit (17 P-Y)

- To carry out seven internal audits of responsibility centres, including:

  - Earth Physics Branch
  - Surveys and Mapping Branch
  - Polar Continental Shelf Project
  - Explosives Branch
  - Mineral Policy Sector
  - Conservation and Non-Petroleum Sector
  - Petroleum Incentive Administration.

- To carry out functional audits in selected areas of:

  - Financial Management
  - Personnel Management
  - Administrative Services.

- To carry out follow-up reviews of the implementation of previous audit recommendations.

B. Finance and Administration

Objective

To provide financial, administrative and electronic data processing support services to departmental operations to ensure accountability and control.

Resource Summary

This Activity accounts for approximately 40% of the total Program expenditures and approximately 52% of the total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Financial Management	2,873	53	2,841	53	2,002	53
Administration	9,428	152	9,210	150	7,091	130
Electronic Data Processing	3,636	118	3,976	119	3,413	104
Departmental Support Services	1,637	30	1,572	30	1,422	30
Activity Management and Support	290	4	268	4	230	4
	17,864	357	17,867	356	14,158	321

Of the total expenditures, 74% is for personnel costs 24% is for operations and maintenance and 2% is for capital costs.

Description

The Finance and Administration Sector is composed of the following Branches:

Financial Management Branch (FMB): This Branch employs the financial officers and related support staff for all organizations in the Department. Most financial staff work directly with service line and support organizations. The costs of the financial organizations are directly related to the cost of the organization being supported.

Administration and Computer Science Branch: This Branch is responsible for the management of the administration, electronic data processing (EDP) and departmental support services sub-activities. It co-ordinates the departmental responses regarding the Access to Information and Privacy (ATIP) Acts. Within the Branch, these sub-activities are carried out by the following organizations.

- **Administrative Services Directorate:** This group provides materiel management, property planning and management (including telecommunications), information management and ATIP secretariat services. It also manages the departmental technical field support services which are funded under the Minerals and Earth Sciences Program (MESP). Functional direction is provided to administrative staff located in the other sectors and branches.

- **Computer Science Centre (CSC):** The Centre provides EDP services for departmental scientific, economic analysis and administrative functions. It provides centralized data processing services to EMR as well as other governmental departments. In addition, it provides systems analyses, development and programming services, advice on hardware and software applications, education, training and documentation. The CSC operates on a cost recovery basis with revenues coming from departmental users (76.7%, based on 1983-84 use) and users from other governmental departments (23.3%).

- **Departmental Support Services:** These comprise security services and occupational health and safety services for the Department. In addition, in-house graphics services and library services are provided for the Corporate Headquarters.

The Finance and Administration (F&A) Sector controls the following person-years based on the 1985-86 Estimates.

Figure 6: Finance and Administration Sector Resources

	Administration Program	Energy Program	MESP	Total
Finance	53	76	49	178
Administration	152	--	43	195
EDP	118	--	--	118
Departmental Support	30	--	--	30
Sector Management	4	--	--	4
Total F & A Sector	357	76	92	525

Performance Information/Resource Justification

The person-years in this Activity will do the following tasks in 1985-86.

Financial Management (53 P-Y)

- To assist branches in the implementation of the approved capital planning system.
- To review and evaluate the financial and managerial information systems and make any necessary revisions.
- To monitor planning and accountability processes and make recommendations as required.

Administration (152 P-Y)

- To develop the three volumes of the departmental Administrative Policies and Procedures Manual relating to materiel management, property planning and management and information management.
- To conduct space optimization studies and develop and implement systems and procedures to ensure the efficient use, control and maintenance of accommodation used by departmental organizations
- To continue implementation of the departmental records improvement program.
- To continue the gradual and modular approach to the design and implementation of office automation systems based on the evaluation of existing pilot projects which relate to administrative policies and procedures and information management.

Electronic Data Processing (118 P-Y)

- To analyze the results of the computer needs' study carried out in 1984-85 and to develop specifications for and initiate procurement of EDP equipment to replace existing equipment, the lease of which expires in June 1986.
- To participate in the Department's study of its communication needs.
- To continue development of the Computer Science Centre's information which will provide additional support to users.
- To participate, in conjunction with Supply and Services Canada and other departments, in the examination of the viability of installing a supercomputer to serve EMR and other departments.

Departmental Support (30 P-Y)

- To develop the volume of the departmental Administrative Policies and Procedures Manual relating to security and occupational health and safety.

- To provide education and training for departmental employees to increase their awareness of security and occupational health and safety issues.

- To maintain a centralized acquisition service for books and publications required by Corporate Headquarters and the Energy Program in order to provide better control and usage.

C. Human Resources Management

Objective

To develop policies and programs and deliver services to meet the current and future personnel management needs of the Department.

Resource Summary

This Activity accounts for approximately 11% of the total Program expenditures and approximately 15% of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Personnel Operations	2,693	57	2,811	56	2,512	56
Management Category Personnel	147	4	142	4	150	4
Activity Management and Support	620	11	600	11	627	11
	4,719	105	4,771	104	4,547	104

Of the total expenditures, 84% is for personnel costs and 16% for operations and maintenance.

Description

The Assistant Deputy Minister, Human Resources is responsible for human resources matters throughout the Department, including planning, staffing, training and development, organization and classification, staff relations, compensation and benefits, official languages and affirmative action programs.

The Human Resources Sector is responsible for the personnel staff throughout the Department. The costs of personnel units, operating in support of line organizations, are reflected in the programs they serve. The management and department-wide functions are funded through the Administration Program.

The Human Resources Sector utilizes the following person-years based on the 1985-86 Estimates, including those classified as special purpose resources.

Figure 8: Human Resources Sector Person-Years

	Administration Program	Energy Program	MESP	Total
Personnel Program Development including Official Languages	33	--	--	33
Personnel Program Operations	57	19	35	111
Management Category Personnel	4	--	--	4
Activity Management and Support	11	--	--	11
Total Human Resources Sector	105	19	35	159

Performance Information/Resource Justification

The person-years in the Activity will do the following tasks in 1985-86.

Personnel Program Development (33 P-Y)

- To deliver personnel programs and services and provide personnel advice to management and employees relating to human resources planning, official languages and affirmative action (e.g., disabled, women and indigenous people).
- To monitor, review and report on progress of these programs to departmental managers, central agencies and the public.
- To integrate human resources planning with corporate and operational planning.

Personnel Program Operations (57 P-Y)

- To deliver personnel programs and services and to provide personnel advice to management and employees of the Department.
- To provide more timely and accurate computerized personnel and associated data to enable departmental management to economize and increase productivity.
- To rely on automated rather than manually compiled data to improve the effectiveness and efficiency of the functional activities in personnel administration.

Management Category Personnel (4 P-Y)

- The Department will review and improve in 1985-86 its Human Resources Planning Systems for the recruitment, development and retention of its senior human resources based on its annual Senior Human Resources Plan; it will also implement a system for the identification, storage and retrieval of career and skills information for its senior employees.

- The Department, in conjunction with the Treasury Board of Canada, will recommend and implement a special program to improve the compensation system for Research Managers.

- The Department will implement special measures to improve the representation in its senior cadre of women and francophones.

D. Communications

Objective

To communicate to the public, information relating to energy policies and programs, mineral policies and strategies, earth sciences programs, and research and technology programs related to the landmass of Canada and its mineral and energy resources.

Resource Summary

This Activity accounts for approximately 32% of the total Program expenditures and approximately 16% of the total person-years.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Public Awareness	3,111	44	3,088	44	2,414	44
Support Services	8,612	36	12,178	36	7,420	36
Activity Management and Support	2,312	27	2,232	26	2,170	27
	14,035	107	17,498	106	12,004	107

Of the total expenditures, 32% is for personnel costs and 68% for operations and maintenance.

Description

This Activity includes the provision of comprehensive public relations support to the Ministers and all departmental programs. It is designed to provide public information in areas of energy, minerals and earth sciences; to gather and analyze public opinion and attitudes towards departmental policies and programs; to analyze media coverage; and to monitor and evaluate all departmental information activities.

Performance Information/Resource Justification

Figure 10 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 10: Communications

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Public Awareness	3,111	44	To increase public awareness of governmental policies and programs in the areas of energy supply and conservation alternative fuels, research and technology, minerals and earth sciences. To conduct research to provide an assessment of public reaction to departmental programs and to establish departmental presence and communications services across Canada.	- Providing services to Ministers' offices for press releases, speeches and statements. - Publishing departmental annual reviews and reports. - Targeting publications, brochures, fact sheets, magazines in support of transportation, substitution, supply, R&D, earth sciences and minerals. - Conducting public opinion surveys and motivational research, and inviting focus groups to assist in the assessment of public awareness. - Providing daily press clipping service to all Members of Parliament and departmental officials to review issues of the day, and analysis of media reaction to major issues. - Providing full range of communications activities carried out by regional communications officers.
2. Support Services	8,612	36	To provide creative support to the full range of communications activities. To ensure consistency in corporate image with a sensitivity to targeted audiences. To ensure high quality of departmental products of a communications nature.	- Providing editorial services (i.e., writing, editing and ensuring language quality of all communications documents designed for public consumption). - Producing standards and guidelines for departmental use, ensuring consistency in all publications. - Conducting advertising in support of residential, transportation, industrial, natural gas, R&D and earth sciences programs and in support of the "National Atlas." - Producing audio-visual productions including news clips and a variety of films and multi-media packages for school audiences in support of various departmental programs. - Encouraging face to face communications through the use of exhibits such as petroleum, residential, transportation, industrial and renewables programs. - Developing Telidon exhibits to describe federal energy policies, programs, projects and other initiatives.
3. Activity Management and Support	2,312	27	To provide policy and operational direction to the Branch. To formulate departmental policies on communications issues. To ensure adequate administrative support for all the foregoing activities.	- Formulating policies concerning such issues as style and presentation of the corporate image, use of audio-visual, distribution, advertising, exhibits and publishing. - Providing the Branch with internal support for all procurement/contracting requirements as well as the housekeeping issues related to planning accommodation, safety and security.

Section III
Supplementary Information

The Forecast and Actual columns on the various tables in this Section have been revised to reflect the recent changes authorized for the program/activity structure of the Administration Program.

A. Analysis by Object

1. Expenditures by Object

Figure 11: Expenditures by Object ($000)

Others	18	23	22	--	--

Note: The Person-Years columns display the forecast distribution of the authorized person-years for the Program by occupational group. The Current Salary Range column shows the salary ranges by occupational group at October 31, 1984. The Average Salary Provision column reflects the estimated base salary costs, including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 14 shows the total cost of each Activity in the Administration Program. Other costs shown consist of the charges for accommodation provided by Public Works Canada ($2,607,000), surgical-medical insurance ($460,000), and other miscellaneous services provided by other governmental departments ($83,000). Costs shown do not include depreciation on accommodation provided by this Department without charge.

Figure 14: Program Costs ($000)

Activity	1985-86 Gross Operating Expenditures	Less Revenue Credited to the Vote	Estimates 1985-86	Add Other Costs	Net Cost	Total 1984-85
Direction and Co-ordination	7,565	--	7,565	529	8,094	6,124
Finance and Administration	26,798	8,934	17,864	1,644	19,508	19,049
Human Resources Management	4,719	--	4,719	485	5,204	5,601
Communications	14,035	--	14,035	492	14,527	17,498
	53,117	8,934	44,183	3,150	47,333	48,272

C. Revenue Summary

The revenues received by the Administration Program are credited back to the Administration Program Vote and are available to offset activity expenditures up to 125% of the amount of revenue printed in the Main Estimates.

Figure 15: Revenue by Type ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Services and service fees	8,934	9,364	7,098

Services and Service Fees: Recoveries are from organizations within EMR and other governmental departments for computing services, EDP equipment rentals and EDP consulting and programming services.

The increase from 1984-85 to 1985-86 is a result of a change in departmental policy concerning use of EDP consultants. Most departmental EDP contracts formerly initiated in the line organizations of the Department will be administered and paid by the CSC. As well, charges for the use of internal EDP consultants have been initiated. These costs will be recovered from these same line organizations.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested to spend $2,094,110,505 for the operation of the Energy Program during the 1985-86 fiscal year. Of this amount, $8,277,000 is for non-budgetary requirements, representing loans to finance regional electrical interconnections. An estimated $356,103,221 for employee benefits, payments to Interprovincial Pipe Line Limited, Petroleum Compensation payments, expenditures related to the Environmental Studies Revolving Fund, and the Canada/Nova Scotia Development Fund will be met under existing statutory authority.

Under the Canada Oil and Gas Act (S.C. 1980-81-82-83, c.81), expenditures out of the Environmental Studies Revolving Fund cannot exceed the total of levies collected in the Estimates year and the balance of levies available from previous years. It is anticipated that all levies collected during the Estimates year will be spent, leaving the undisbursed balance unchanged at $1,300,000.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

1. This Activity includes the payment for compensation from the Petroleum Compensation Account. See page 3-63.

3. This Activity is financed through a Revolving Fund. For this particular Fund, net cash Estimates are equal to the anticipated operating profit (loss). For purposes of this Departmental Part III of the Estimates, this Activity is included in the Administration of Canada Oil and Gas Lands Activity. Page 3-47 refers. For detailed information on the Revolving Fund, refer to page 3-65.

Section I
Program Overview

A. Highlights

In accordance with the Economic and Fiscal Statement delivered in the House of Commons on November 8, 1984, federal expenditures on energy demand and supply programs will be reduced as part of an overall Energy Program review and evaluation. The following initiatives will be undertaken, which, together with other adjustments, will result in more than a $600 million saving in Energy, Mines and Resources Canada (EMR) projected expenditures during the 1985-86 fiscal year:

- reduction of Petroleum Incentives Program (PIP) expenditures in 1985-86 by $250 million;
- termination of the Canada Oil Substitution Program (COSP) effective March 31, 1985, effecting a saving of $95 million in 1985-86;
- implementation of measures to terminate the Canadian Home Insulation Program (CHIP) by March 31, 1986, resulting in an $84 million saving in 1985-86;
- deferment of new commitments under the Natural Gas Laterals Program (NGLP), providing for an $85-million saving in 1985-86;
- cancellation of the Maritimes Engineering Program (MEP) of engineering work on the Maritimes section of the Trans Quebec and Maritimes gas pipeline, saving $8 million in 1985-86;
- winding up of Canertech, an entity of Petro-Canada, investing in conservation and renewable energy projects, saving $30.6 million in 1985-86; and
- reduction of the level of expenditures of the interdepartmental energy research and development program by $60.8 million in 1985-86.

The highlights of the Energy Program for 1985-86 are described below. Details are discussed in the Background and Planning Perspective portions of this Section, and in the Analysis by Activity Section, starting on page 3-26.

- To adjust, as required, Canadian energy policies and program elements to achieve the Program's objectives of economic growth, self-sufficiency, energy security, enhanced Canadian

participation, fair treatment and a stable planning environment.

- To study the changes which may be required relative to domestic petroleum pricing, the tax system, new oil supply, oil demand reduction by substitution and conservation, and incentives for Canadianization, and to co-ordinate recommendations for their implementation.

- To ensure the orderly development, provision and utilization of adequate and secure sources of petroleum to meet Canada's energy requirements consistent with the government's energy policies.

- To develop and administer programs concerned with oil and gas prices, including: domestic pricing; export pricing; pipeline subsidies; and gas market expansion incentives. The domestic price of oil will no longer be set administratively but will be based on market forces.

- To design a stand-by organization for the National Emergency Agency for Energy (NEAE).

- To operate conservation and non-petroleum programs to ensure that they continue to contribute to the government's objective of energy security in the most cost-effective way.

- To place increasing emphasis on education, highly cost-effective information and technological transfer initiatives, as well as focused financial assistance to specific regions and sectors, to overcome barriers to cost-effective energy conservation and oil substitution.

- To consolidate advances and maintain momentum in the development and use of non-petroleum energy sources.

- To assess the Canadian ownership rate and the Canadian control status of applicants, and to issue certification for use in applying for incentives contributions and for production licences on Crown Lands, pending completion of a comprehensive review of the PIP and decision as to its replacement.

- To assess applications for incentives contributions with respect to expenditures incurred in the exploration for, and the development of, oil and gas in Canada, and to process payments, pending decisions as to the replacement of the PIP.

- To continue to produce high quality and timely Petroleum Monitoring Agency's (PMA) publications and reports.

- To evaluate petroleum operating cost estimates for 1982, 1983 and 1984.

- To finalize the main elements of a federal mandatory allocation and rationing program for petroleum products.

- To prepare interdepartmentally co-ordinated plans for energy research and development (R&D) programs for approval by the Panel on Energy R&D.

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For details see page
Energy Policy	8,585	8,353	232	3-26
Petroleum	456,031	1,499,594	(1,043,563)	3-29
Emergency Planning (including the Energy Supplies Allocation Board)	2,100	2,171	(71)	3-33
Conservation and Non-Petroleum	385,579	575,719	(190,140)	3-35
Energy Research and Development	2,323	2,732	(409)	3-40
Monitoring of Energy Enterprises	1,654	1,763	(109)	3-42
Petroleum Ownership, Control and Incentives	1,625,269	1,724,479	(99,210)	3-44
Administration of Canada Oil and Gas Lands	59,477	10,182	49,295	3-47
Program Management and Support	2,096	2,321	(225)	3-53
Sub-totals	2,543,114	3,827,314	(1,284,200)	--
Less: Market Development Incentives Program	92,900	26,300	66,600	3-64
Totals	2,450,214	3,801,014	(1,350,800)	--
Authorized person-years	1,405	1,363	42	3-55

The resources shown in the Forecast column have been revised to reflect the transfer to the Administration Program of the costs of the public information activities which were previously included in the Energy Program. In addition, the 1984-85 forecast reflects the consolidation of the Petroleum Sources and Oil Pricing and Compensation Activities into

the new Petroleum Activity as displayed in this Plan and a similar consolidation of the Non-Petroleum Sources and Energy Conservation Activities into a new Conservation and Non-Petroleum Activity.

Explanation of 1985-86 Changes: The 1985-86 estimated requirements of $2,450.2 million represent a decrease of approximately $1,350.8 million (or 36%) over the 1984-85 forecast. The decrease is made up of the following items:

	($ millions)
• Changes in contribution requirements	
- Natural Gas Laterals Program (NGLP)	(178.0)
- Maritimes Engineering Program (MEP)	(15.0)
- Petroleum Compensation	(850.8)
- Coal Utilization	(13.3)
- Coleson Cove Plant	(6.0)
- Propane Vehicles Grant Program (NVGP)	(12.0)
- Remote Community Demonstration Program (NCDP)	(2.6)
- Forest Industry Renewable Energy (FIRE)	10.0
- Industrial Conversion Assistance Program (ICAP)	(1.6)
- Renewable Energy Demonstration Program in Quebec (ENERDEMO)	(4.0)
- Canada Oil Substitution Program (COSP)	(90.9)
- Canadian Home Insulation Program (CHIP)	(79.0)
- Petroleum Incentives Program (PIP)	(100.0)
- Canada/Nova Scotia Development Fund	50.0
• Change in funding from Alberta under the Market Development Incentives Program (MDIP)	(66.6)
• For all activities allowance for inflation on personnel costs only	2.7
• Reduction in program operating costs Canada Oil Substitution Program (COSP) and Canadian Home Insulation Program (CHIP)	(10.0)
• Establishment of Super Energy-Efficient Home Program (SEE)	6.0
• Expansion of ENERDEMO Program	3.7
• Establishment of new Canada/National Energy Audit Program (NEAP)	8.3
• Other Program changes and fluctuations	(1.7)
Total:	(1,350.8)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $3,801.0 million or 33% higher than the 1984-85 Main Estimates of $2,867.2 million (Extracts from Part II of the Estimates, page 3-6). The difference of $933.8 million reflects the following major offsetting items:

	($ millions)
• Supplementary Estimates (B), 1984-85, providing additional funding for the Petroleum Compensation Account	850.0
• Increased requirements in the Petroleum Incentives Payments due to increased drilling activities	100.0
• Realignment of the Communications Activity's costs to the Administration Program due to approved Program/Activity changes	(13.5)
• Realignment of Corporate functions from the Energy Policy Activity to the Administration Program	(2.7)
Net Change	933.8

C. Background

1. Introduction

The Energy Program is one of two operational Programs within EMR, the other one being the Minerals and Earth Sciences Program (MESP). The Energy Program has the following main responsibilities:

- Establishing and maintaining effective strategies, policies and programs for the supply, efficient use and conservation of energy resources, with due regard for other governmental economic and social goals.

- Promoting the orderly development of adequate and secure sources of energy to meet Canada's energy needs.

- Encouraging the availability to Canada of optimal technical capability for the research, development, supply, processing and use of renewable and non-renewable energy.

- Administering the acts and regulations which form the bases of Canada's national energy policy which is directed at the objectives of economic growth based on energy resource development, self-sufficiency and energy security, enhanced Canadian participation, and fair treatment for consumers and producers in a stable planning environment of federal, provincial and industrial co-operation.

- Administering the relevant acts and regulations pertaining to the exploration and development of oil, gas and other mineral resources on Canada Lands, in conjunction with other federal departments and agencies, provinces and territories, and interested industrial sectors.

- Preparing contingency plans to deal with oil shortages.

2. Special Relationships

This Program has a close relationship with the three operational Sectors of the MESP, namely, Mineral Policy, Earth Sciences, and Research and Technology. Special relationships have also developed with a number of other departments, agencies and committees having responsibilities with strong interests in the energy policy area. Some of these departments and agencies are responsible for providing energy-related advice to Cabinet; others are responsible relative to the implementation of Cabinet's energy policy decisions. Their roles and policy inputs vary in accordance with the particular issue being considered. In total, nearly 40 departments, agencies and committees have varying degrees of participation in the energy policy advice and implementation processes for which the Minister and the Department have the overall co-ordinating role.

Several central agencies and committees are key participants in the policy co-ordinative function. The Treasury Board of Canada Secretariat (TBS) deals with energy-related issues in the context of its functions which encompass all national issues. The Department of Finance Canada, in its responsibility for the country's taxation structure, also has a direct concern with the role of energy in the economy. A number of interdepartmental committees assist in the advice and implementation functions: the Interdepartmental Panel on Energy Research and Development; the Committee on Megaprojects, Industrial and Regional Benefits; and the Senior Policy Committee (SPC) on Northern Resource Development. This latter Committee also has representation from the two Territorial governments.

The Interdepartmental Panel on Energy Research and Development represents 22 federal government departments and agencies. The Panel reviews federal activities; develops and implements a co-ordinated federal program; advises Ministers on the allocation of funds; co-ordinates federal government activities, including the federal approach to major international and federal-provincial initiatives; and provides for the exchange of information on policies and strategies which would affect the direction of federal programs.

A formal link exists between the Department and Indian and Northern Affairs Canada (INAC) through the Canada Oil and Gas Lands Administration (COGLA) whose Administrator reports to the Deputy Ministers (DMs) of the two Departments.

Other Departments such as Justice, Environment, Fisheries and Oceans, and Transport also have responsibilities for the development of the country's energy resources. In addition, there are some 18 other departments and agencies whose participation in energy issues is essential to the energy advice and implementation functions related to Cabinet decision-making.

In the context of EMR's contacts with other governmental bodies, there is a special relationship with the Agencies which, along with EMR, report to the Minister. In total, the Department and these Agencies -- National Energy Board, Atomic Energy Control Board, Atomic Energy of Canada Limited, Petroleum Monitoring Agency, Energy Supplies Allocation Board, and Petro-Canada -- carry out responsibilities for all aspects of energy supply in support of the Minister's mandate as Principal Adviser to the Cabinet on energy policy development and implementation. The Agencies perform regulatory, research, or policy functions as specified in their legislative mandates. The Minister and Department have responsibilities for the development and co-ordination of policy on energy in all forms.

3. Legal Mandate

The legislative framework for the Activities of the Energy Program can be found in the Department of Energy, Mines and Resources Act and the Resources and Technical Surveys Act.

The Canadian energy initiatives have resulted in major new and revised legislation for the Activities of the Energy Program. The major Energy Program legislation is listed in Section III, page 3-61, as are other acts and instruments administered in whole or in part through the organizations in the Energy Program.

4. Program Objective

The objective of the Energy Program is to establish and maintain effective policies, strategies and programs for the supply and efficient use of energy resources, with due respect for other social and economic goals.

5. Program Organization for Delivery

Activity Structure: The Energy Program consists of the nine Activities shown in Figure 2, pages 3-14 and 3-15. This reflects a change from the Activities shown in 1984-85. Details of the Program structure below the Activity level are included in Section II, Analysis by Activity, starting on page 3-26.

The Activity structure is designed in parallel with the organizational structure. The responsibility centres at the sub-activity level report directly to the appropriate sectorial/administrative heads.

Organizational Structure: This Program is composed of three major Sectors (Energy Policy Analysis, Petroleum, and Conservation and Non-Petroleum), and two Administrations (Petroleum Incentives, and Canada Oil and Gas Lands). The Research and Technology, Finance and Administration, and Human Resources Sectors, plus the Communications Branch, also support this Program. Finally, important inputs are provided to the Program by the Earth Sciences Sector through the oil and gas resource appraisals

provided by the Geological Survey of Canada's Institute of Sedimentary and Petroleum Geology, located in Calgary, Alta. Figure 2 shows the relationships between the resources requested for 1985-86 and the organizational/activity structures.

The Assistant Deputy Ministers (ADMs) and Administrators report to the DM on all energy policy and program matters, and to the Associate (Assoc.) DM on financial, administrative and personnel matters.

The Petroleum Monitoring Agency (PMA) is a separate and independent Agency reporting through its own Chairman to the Minister. For administrative and budgetary purposes, however, it forms part of this Program (see Activity F on page 3-42) and is closely linked to the Energy Policy Analysis Sector (EPAS). (See Activity A on page 3-26.)

The Energy Supplies Allocation Board (ESAB) reports directly through its own Chairman to the Minister. The Energy Emergency Planning Group reports to the Chairman with respect to its planning function in support of the Energy Supplies Emergency Act and, in other emergency planning matters, to the ADM, Petroleum. (See Activity C on page 3-33.)

Canada Oil and Gas Lands Administration (COGLA) reports to both the DM (EMR) and the DM (INAC). Details are discussed in Activity H on page 3-47.

The Office of Energy Research and Development (OERD) is the Secretariat to the Interdepartmental Panel of Energy Research and Development. OERD is located in the Research and Technology (R&T) Sector in EMR. It provides co-ordinated recommendations supporting national energy objectives concerning resources allocations and policies.

D. Planning Perspective

1. Environment

National energy objectives have a direct bearing on the broad energy mandate of ensuring the supply and efficient use of energy resources, with due regard to other governmental, social and economic goals. Hence, the issues, factors and assumptions, acting as major determinants of the environment for 1985-86, are discussed within each goal.

- **Economic Growth:** This is based on developing energy resources.
- **Self-sufficiency and Energy Security:** This means securing oil and other energy supplies for all regions.
- **Enhanced Canadian Participation:** This is having Canadians play a growing role in their energy industries.
- **Fair Treatment:** This means sharing by all Canadians of the energy benefits and burdens.

- **Stable Planning Environment:** This is based on co-operation between federal and provincial governments and industry.

The major determinants are listed below.

General Determinants: A number of factors, having their origin in broad governmental policy, may affect the direction of the work planned for 1985-86: Economic Envelope expenditure restraint; possible changes in generalized tax measures; the improved state of federal-provincial energy relations; a revised outlook for international oil prices over the remainder of this decade, accompanied by changed market conditions for both Canada's energy imports and exports, and the energy measures announced in the Speech from the Throne on November 5, 1984.

The basic five energy policy goals will be maintained and actively pursued. To reach stated program objectives effectively and efficiently, however, there is a continuous need to fine-tune various program mechanisms, to shift emphasis among them and, at times, to set new priorities as economic conditions change. There is also a need for a continuing governmental role in relation to the five policy objectives, particularly in assisting industry with major new projects and the related infrastructure. For these reasons, attention is being directed towards optimal spin-off benefits, in terms of regional employment and industrial activity, associated with Canada Lands exploration and development.

Economic Growth Determinants: As an engine of growth for the benefit of all regions of Canada, the development of energy resources will proceed to the extent that new investment can be attracted in response to market growth opportunities; appropriate tax, loan and price incentives; greater productivity through technological innovation; and measures designed specifically for industry sectors of strong growth and major spin-off potential.

Energy Security Determinants: Continuing uncertainty in the international oil market, as it affects pricing and the continuity of future oil supply, will make planning and decisions difficult both for public policy makers and private investors. In particular, uncertainty as to whether recent oil price declines reflect the longer-term trends could inhibit efforts to achieve oil self-sufficiency.

The uncertainty in international prices will have a depressing effect on new energy projects, both in terms of their own inherent profitability and the industry cash flow necessary to finance them. Hence, there is an ongoing need to support the industry's continued efforts in Western Canada and on the Canada Lands.

Finally, there will be a major preoccupation to ensure that Canada's needs for electricity are met, using Canadian resources and technology.

Enhanced Canadian Participation Determinants: Increased participation by Canadian companies in exploration and development will determine the extent of enhanced Canadian participation in the oil and gas industry.

Fair Treatment Determinants: The new federal-provincial energy agreements, effective upon the expiry of the interim agreements in early 1985, must ensure that all Canadians, whether they live in the East or the West, and whether they be consumers or producers, share equally in Canada's energy benefits and burdens.

Stable Planning Environment Determinants: The extent to which a stable planning environment is achieved will depend on the degree of co-operation between governments, and with industry, through consultation and the full recognition and understanding of respective rights and responsibilities.

The oil resource development environment in the East Coast offshore will be improved with implementation of the Newfoundland offshore Agreement-in-Principle of June 1984.

2. Initiatives

The initiatives for this Program are discussed in the context of the national energy goals.

Economic Growth: A number of measures are being implemented to enhance energy resource development, not only to ensure energy security but also to promote economic growth and job creation. These measures include the accelerated design and construction of oil sands projects, e.g., initiatives that will exploit the economic opportunities of industrial resources in Eastern Canada, Ontario, and Quebec and the natural and human resources of Western Canada. Investment in these and other energy resource development projects will be stimulated by such incentives as the reduction of excessive front-end loading of taxes in favour of a system which is sensitive to profitability. Regional participation in offshore activity will be promoted to ensure a maximization of local content. The resultant regional strengths and prosperity will benefit all Canadians. Accordingly, full recognition will, in turn, be given to the resource development role as a powerful engine of growth and job creation across all of Canada.

Energy Security: The Program contains many initiatives designed to reduce Canadian oil demand while, at the same time, increasing the supplies of domestic oil. These initiatives include measures to encourage substitution away from oil, conservation, and flexible and balanced development of frontier oil and gas reserves. Starting at page 3-67, details of the energy programs' descriptions, historical details, budgets for 1985-86, etc., are more fully discussed.

Substitution away from Oil: Substitution is intended to reduce the use of oil in the residential, commercial and industrial sectors. The

following representative programs are designed to contribute to the off-oil objective. Their effectiveness is routinely evaluated to ensure adequacy in both intent and realization.

- **Gas Distribution Systems Expansion Program (DSEP):** This program is described on page 3-67. The expected total cost of this program in 1985-86 is approximately $60 million.

- **Alternative Vehicle Fuels:** Good results have been achieved in research concerning alternative vehicle fuels. Several programs, directed at supplying alternative fuels for vehicles, have been developed, including the Propane Vehicles Grant Program (PVGP) and the Natural Gas Vehicles Assistance Program (NGVAP). The expected total cost for alternative vehicle fuels in 1985-86 is approximately $7.2 million.

- **Renewable Energy Sources:** The use of renewable energy sources is encouraged through a number of projects including the Forest Industry Renewable Energy (FIRE) Program, the Solar Demonstration Program, the ENERDEMO Program (formerly the Conservation and Renewable Energy Demonstration Agreements (CREDA) and the Remote Community Demonstration Program (RCDP)). The expected total cost for renewable energy sources in 1985-86 is approximately $50.6 million.

- **Coal Utilization Program:** This initiative is directed at the Atlantic Provinces and, at a later date, possibly in other regions, where coal is available but imported oil highly depended upon. The program assists in the introduction of new environmentally-acceptable technologies to consume coal more efficiently. The expected cost for the coal utilization program in 1985-86 is approximately $30.3 million.

Conservation: The aim of energy conservation initiatives is to accelerate and intensify the implementation of cost-effective opportunities in the major energy using sectors. Important progress has been made, and additional economic possibilities are being evaluated.

An important emphasis is placed on education, information initiatives, and technological development and transfer in the residential, commercial and industrial sectors. Two projects, the Canadian Home Insulation Program (CHIP) and the Super Energy Efficient Housing Demonstration (SEEHD) Program are designed to promote conservation in the home. In the Atlantic Region, the Atlantic Energy Conservation Investment Program (AECIP) focuses on conservation assistance in the industrial and commercial sectors. Details are given on pages 3-67 to 3-69 inclusive. The expected total cost for conservation in 1985-86 is $130.9 million.

Balanced Development of Frontier Oil and Gas Reserves: Special oil pricing and taxation incentives have been implemented to encourage the development of new oil and gas sources. The 1981 Agreement between Canada and Alberta provided for a "New Oil Reference Price," essentially at the international level, for oil discovered after 1973. As a result of further pricing provisions agreed to by the two governments in June 1983, close to 40% of all Canadian oil production is now eligible for the international price incentive.

There is an on-going assessment of the effectiveness of fiscal instruments as devices for revenue collection and industry incentives. The objective is to provide for a fair distribution of oil and gas benefits between producers and consumers, and, through the PIA, to ensure sufficient industrial incentives for balanced resource development in support of energy security. As of December 1983, incentives on the Canada Lands amounted to $2,261.5 million, and PIP processed 1,055 applications relating to exploration or development expenses through the PIA in the provinces other than Alberta. The expected cost for the Petroleum Incentives Program in 1985-86 is approximately $1,600 million.

Energy security is also promoted through: the exploration and resource appraisals of Petro-Canada; the federal government's support for electric power development; and the contingency plans of the Energy Supplies Allocation Board (ESAB) for dealing with oil shortages.

Enhanced Canadian Participation: One of the five major thrusts of federal energy policy -- the government's Canadian participation policy -- has two objectives:

- Canadian ownership of at least 50% for any oil and gas development of the Canada Lands.

- Introduction of a "Canadian share" to encourage Canadian private and public ownership of oil and gas production in discoveries made after October 28, 1980.

The chief instruments of Canadianization include: the Petroleum Incentives Program's (PIP) payments, which cover up to 80% of exploration costs on Canada Lands for eligible Canadian-owned and -controlled firms; the Canadian Ownership Special Charge, which supports the Crown's direct participation in the oil and gas sector; exploration agreements negotiated by the Canada Oil and Gas Lands Administration (COGLA) with companies which undertake exploration leading to production on Canada Lands; and the requirement that the level of Canadian ownership in Canada Lands oil production projects be at least 50%. These instruments have encouraged the development of a stronger Canadian private and public sector presence in the industry.

The process of Canadianization has, in recent years, been characterized by a shift from major acquisitions to the current, more gradual process, where non-acquisition initiatives will play the leading

role. In this regard, private Canadian firms are entering into joint ventures and into farm-ins on Canada Lands with foreign-controlled companies. This addition of new Canadian players to consortiums -- arising from this ownership focus and COGLA's role in encouraging transfer of technology, expertise and knowledge to Canadian owned firms -- supports the aim of increased Canadianization of the industry. As a result, while the development of Canada Lands resources proceeds, strong participation by Canadian firms will be ensured.

Fair Treatment: The establishment of an oil and gas pricing and revenue system that is fair to both the consumer and petroleum industry is a fundamental goal of the Energy Program. Oil and natural gas pricing in Canada is determined through federal-provincial negotiation, and, in this process, the Government of Canada ensures that prices are fair to consumers in the various regions while, at the same time, providing the oil industry with the necessary incentives to develop new sources of oil.

Other initiatives designed to assist the industry in resource development programs have included suspension of the Incremental Oil Revenue Tax (IORT) during the period June 1982 - July 1984; modification of the Petroleum and Gas Revenue Tax (PGRT); extension of the New Oil Reference Price (NORP) to various categories of oil production; and, in some instances, the retention of an earned depletion allowance. Fairness to consumers has been ensured by keeping oil prices significantly below international levels, when world oil prices were rising rapidly, and maintaining the gas/oil price parity at 65%.

Stable Planning Environment: The projected implementation of an offshore agreement with Newfoundland in 1985-86, the negotiation of agreements relating to energy pricing and taxation acceptable to all provinces in the same period, and the satisfactory resolution of such other matters as interprovincial transfers of electrical energy will proceed on the basis of full consultation. Emphasis will be placed on the establishment of a stable planning environment in which all governments can work effectively towards national and regional energy objectives. Recognition of the respective rights and responsibilities of each government will be the basis for the kind of co-operation essential for the resolution of day-to-day problems and for the long-term planning needed for the combined supply and efficient use of the country's energy resources.

3. Program Effectiveness

The Energy Program achieves its objectives and goals through special relationships and co-operation with a wide range of federal, provincial, municipal, individual, and national/international industrial-academic-research complexes. While the Program is too diversified in outputs to provide comprehensive indicators that simply and clearly indicate its effectiveness, proxy measures are used whenever possible. The Department is achieving positive results, as revealed in the findings of program evaluations. Together with such reviews as internal audits and A-Base

studies, EMR continues to improve the selection of more meaningful indicators in assessing the Program's effectiveness, especially through:

- analyzing the results of initiatives taken;
- evaluating significant planned outputs and results in Section II, Analysis by Activity; and
- presenting program results and analyzing trends.

In addition to the above-noted general indicators of effectiveness, and to ongoing performance measurement carried out by departmental managers, EMR is currently implementing a full-scale Program Evaluation Plan covering separate components of the Energy Program. This evaluation, which is administered through the Program Evaluation Branch, permits a deeper, albeit periodic, examination of the relevance, effectiveness and impact of individual departmental programs.

With the maturing of the Energy Program, this area will be the principal focus of activity for the Program Evaluation Branch in this and future years.

The last year has seen the completion of an evaluation of the Canadian Home Insulation Program (CHIP) which, at $109.5 million estimated expenditures in 1985-86, is the second largest program in the energy sector. CHIP is one of the principal home energy conservation components of the Conservation and Non-Petroleum Activity. (See page 3-35 of Section II, Analysis by Activity.)

Very briefly, CHIP is aimed at inducing homeowners and renters to retrofit their homes (increase their insulation, caulking, etc.) and thereby reduce their consumption of energy. The program provides a taxable grant up to a maximum of $500 against the cost of retrofit materials and labour. Recent amendments to the CHIP regulations (1982) require program participants to contribute up to $300 of their own money to be eligible for the maximum $500 grant.

The CHIP evaluation study (carried out over 1982 and 1983) concluded that, while the original targets for CHIP were ambiguous and unrealistic, the initiative resulted in a large number of homeowners taking insulation action, largely in attics. Depending on the various assumptions applied, the benefit-cost ratio of CHIP is between 0.56 and 2.32 (which is considered reasonable in comparison to other governmental programs). The evaluation also indicated that the program has not induced the larger expenditures required for complete retrofitting (approx. $1,500 - $3,000).

While energy savings from such a complete retrofit are regarded as economically efficient from the overall social perspective, they are seen as less so from the individual consumer's point of view. The study indicated that there were significant opportunities to increase program

awareness and participation in certain regions and among certain socio-economic groups. It also pointed to a number of ways in which the management, administration and delivery of the program could be improved. Overall, CHIP is estimated to have created over 44,000 person-years of employment between 1977-82.

In response to these findings, and coincidental with new energy policy directions, it has been decided that the rate of the CHIP grant be reduced to 33 1/3%, and that the program be terminated effective March 31, 1986.

Evaluation work is now in progress on a number of other components of the Energy Program, including: Petroleum Incentives Administration, Forest Industry Renewable Energy Program, and Transportation Energy Conservation.

Readers desiring more information on this topic are encouraged to examine statements by the Minister, departmental annual reports, updates to the various programs, and such monitoring surveys as those issued by the PMA and Statistics Canada.

The following charts and tables illustrate the effectiveness of the of Energy Program in terms of expectations associated with component programs in the period prior to 1985. They relate, in particular, to the energy security and fair treatment objectives.

Figure 3, "Oil Supply/Demand Projections," demonstrates a continuing need for offshore light crude oil to meet domestic refinery requirements, since the heavy crude which is exported cannot generally be utilized in Canada. Figure 4 relates domestic ("blended") oil prices and natural gas prices to international oil price trends showing a favourable 65% parity with domestic oil for natural gas and a converging of domestic and international oil prices in the post-1981 period. Figures 5 and 6, in percentage and dollar terms, illustrate changing revenue-sharing relationships in which the federal share was increased in the early 1980s, with the industry share being restored by 1985 to mid-1970s levels.

Figure 3: Oil Supply/Demand Projections

Figure 4: Oil and Natural Gas Prices (1983 Canadian $/m³. Oil Equivalent)

PSCI

Figure 5: Oil and Gas Revenue Sharing (Percentages)

	Federal Government	Provincial Government	Industry
1975	6.0	38.0	56.0
1977	4.0	50.7	45.3
1979	7.3	51.3	41.4
1980[1]	(9.7)	54.0	55.8
1981	21.7	35.7	42.6
1982	26.2	27.9	45.9
1983	20.9	30.5	48.6
1984[2]	15.0	32.0	53.0
1985[2]	18.0	30.0	52.0

1. The federal deficits in oil and gas revenues are due to high Oil Import Compensation Payments (OICP) associated with rapid increase in international oil prices in 1979-80.

2. Estimates.

Section II
Analysis by Activity

A. Energy Policy

Objective

To establish federal energy policies, strategies and activities, with due regard to their economic, social, regional and environmental impacts, and to Canada's international energy relations.

Resource Summary

This Activity accounts for approximately 0.4% of the total Program expenditures and approximately 10% of the total person-years. A more detailed breakdown of resources is given in Figure 7.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Energy Strategy	2,710	46	2,594	46	2,375	46
Financial and Fiscal Analysis	1,656	25	1,610	25	1,514	25
Corporate Development and Economic Analysis	2,297	41	2,456	41	1,918	37
International Energy Relations	749	13	730	13	752	14
Energy Policy Co-ordination	165	3	157	3	152	3
Activity Management and Support	1,008	7	806	7	938	6
	8,585	135	8,353	135	7,649	131

Of the total budgetary expenditures, 75% is for personnel costs, 21% for operations and maintenance and the remaining 4% for grants and contributions.

Description

The Energy Policy Activity provides the direction and background analysis for energy policy initiatives which have an overall or strategic impact, such as the pricing of crude oil and natural gas and the development of overall energy policy framework. The Activity plans, develops and maintains an energy taxation and incentive system directed to effectively

serve Canada's energy policy objectives of economic growth, self-sufficienty and energy security, enhanced Canadian participation, fair treatment, and a stable planning environment. In the area of corporate development and economic analysis, there are responsibilities for short-term to medium-term policy analyses related to current energy issues, for longer-term economic studies of underlying problems in the energy sector, for the monitoring of corporations in the energy area which report to Parliament through the Minister, and for Canadianization analyses, policy development and program monitoring. In the field of international relations, this Activity is concerned with the effective management and co-ordination of Canada's energy relations vis-à-vis other countries and international organizations, with monitoring and analyzing international energy developments which impinge on Canadian interests, and with ensuring that the domestic energy policy process is fully informed of Canada's international interests and commitments.

Performance Information/Resource Justification

Figure 8 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 8: Energy Policy

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Energy Strategy	2,710	46	To co-ordinate the review and analysis of policy objectives and instruments; to analyse, develop and co-ordinate new policy recommendations on: (1) strategic supply/demand and price issues, (2) federal-provincial energy issues, (3) northern energy and Aboriginal issues, and (4) energy trade policy; and to develop and maintain energy statistical data bases and analytical tools.	- Evaluating national energy programs in relation to energy policy objectives. - Examining, for renewal, energy pricing and taxation agreements with producing provinces. - Co-ordinating policy development concerning energy-related projects on Canada Lands. - Providing an energy analytical framework and forecast scenarios. - Liaising with other federal departments, territorial governments and Aboriginal groups in formulating northern energy policies.
2. Financial and Fiscal Analysis	1,656	25	To plan, develop, advise on and maintain an effective federal energy taxation and incentive system; to evaluate the interaction of federal and provincial royalty/taxation and incentive systems; to develop accurate forecasts of industrial and governmental energy revenues; and to encourage new petroleum projects.	- Assessing the effectiveness of fiscal instruments in revenue collection and in providing sufficient incentive for industrial re-investment activities. - Evaluating new energy project proposals from the private sector seeking various forms of governmental assistance or fiscal relief. - Determining the financial capacity of the petroleum sector to meet Canada's energy security objectives. - Evaluating the impact of alternative pricing and fiscal measures on the petroleum industry. - Forecasting federal government revenues from the petroleum sector. - Finalizing the Canada Oil and Gas Act fiscal regulations.

6033

Figure 8: Energy Policy (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
3. Corporate Development and Economic Analysis	2,297	41	To plan, develop and implement policies on Canadianization of the petroleum industry; to manage energy expenditures of the federal government and its agencies; to conduct economic analyses of energy initiatives; to evaluate government policies and programs in the electrical and nuclear areas; and to analyse the impact of energy policies on the economy.	- Analyzing the implementation of the Canadianization provisions of the federal energy programs. - Monitoring the operations of Petro-Canada and Co-Energco. - Advising Investment Canada on energy cases. - Evaluating energy expenditure programs and their policy rationales. - Carrying out in-depth cost benefit analyses of energy projects such as natural gas pipelines. - Evaluating government policies by undertaking economic and financial analyses in such areas as Canada Deuterium Uranium reactor (CANDU) sales, Bay of Fundy tidal power, Churchill Falls, etc. - Analyzing the impact on the economy of changes in energy prices, and developing policy proposals to ameliorate negative effects.
4. International Energy Relations	749	13	To advise on the effective management of Canada's energy relations vis-à-vis other countries and international organizations.	- Managing Canada's energy bilateral relationships with such key countries as the U.S.A., Japan, France and Mexico. - Developing energy co-operation with other countries. - Promoting and defending Canadian interests and policies in the International Energy Agency (IEA). - Analyzing emerging opportunities for Canada in Pacific Basin energy trade and co-operation. - Explaining Canada's domestic energy policies and objectives to foreign audiences. - Advising on the ongoing plans and operations of Petro-Canada International Assistance Corporation (PCIAC). - Analyzing the factors influencing the U.S.A. market for exports of oil, natural gas and electricity.
5. Energy Policy Co-ordination	165	3	To plan and implement energy programs and services in support of the Minister's parliamentary functions, and to develop and carry out program planning, evaluation and information functions directed towards national energy policy objectives.	- Preparing notes for daily debates in Parliament, for special debates and for parlimentary committees. - Analyzing, on a monthly basis, domestic and international energy trends. - Preparing energy program documents under the policy and expenditure management system.

B. Petroleum

Objective

To ensure the development, in an orderly fashion, of adequate and secure sources of petroleum to meet Canada's energy requirements.

Resource Summary

This Activity accounts for approximately 19% of the total Program expenditures and approximately 10% of the total person-years. A more detailed breakdown of resources is given in Figure 9.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Petroleum Resources	5,265	12	4,957	12	2,303	7
Oil Supply	997	16	860	17	827	17
Petroleum Utilization	1,085	19	831	19	1,137	20
Natural Gas and Liquids	147,229	41	340,787	42	149,002	37
Oil Pricing and Compensation	300,584	33	1,151,090	29	492,714	31
Activity Management and Support	871	12	1,069	15	812	15
	456,031	133	1,499,594	134	646,795	127

Of the total expenditures, 1% is for personnel costs, 1% for operations and maintenance and the remaining 98% for contributions.

Description

The Petroleum Activity carries out economic and technical assessments of: Canada's oil and gas resources and requirements; the conditions of their development; the component of foreign oil in meeting Canadian requirements; related transportation and processing systems pertaining to oil and gas supplies from all sources; and the condition of oil and gas markets, domestic and foreign, and of factors affecting these markets. These assessments are used to support policy development, program design and implementation.

The Activity implements initiatives relative to: petroleum resource assessments; heavy oil research, development and demonstration; adaptation of the oil refining industry to changing supply and market circumstances, and related policy objectives; monitoring oil product markets; charges on exports of crude oil and oil products in conjunction with the National Energy Board (NEB) and Finance Canada; the management

of Canadian oil supply, domestic and imported; the domestic pricing of gas outside its province of production; the export pricing of gas; and the expansion of gas transmission and distribution systems.

Included in the Activity are the various compensation and pricing programs constituting Canada's administered oil pricing system. Revenues are collected by way of the Petroleum Compensation Charge (PCC) and used to fund payments to importers of petroleum and to producers of new conventional and synthetic crude oil in an amount equal to the difference between Canadian and international prices. The Activity involves monitoring that difference, establishing rates of compensation and ensuring that payments are appropriately made.

The Activity also includes programs for maximizing the utilization of Canadian crude oil by subsidizing transportation costs incurred in shipping crude oil east of Montreal and by offering financial support on crude oil exchanges involving domestic for foreign crude oil. Finally, an amount of $8.4 million is included to cover Interprovincial Pipe Line Limited's (IPL) financial deficiency in constructing and operating its pipeline from Sarnia to Montreal.

As well, the Petroleum Sector maintains an ongoing interface with the National Energy Board on oil and gas regulatory matters and provides appropriate representation vis-à-vis other governments and international agencies.

Performance Information/Resource Justification

Figure 10 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 10: Petroleum

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Petroleum Resources	5,265	12	To contribute to the design and implementation policies for optimal development of Canada's petroleum resources through the provision of information and analysis on oil and gas resources, particularly from geological and engineering standpoints.	- Determining supply price and future production of oil and gas in Western Canada and frontiers. - Assessing non-conventional resources: enhanced oil recovery, oil sands and heavy oil upgraders. - Implementing Canada-Saskatchewan heavy oil-fossil fuel R&D agreement.
2. Oil Supply	997	16	To develop and implement oil supply policy so as to enhance security of supply and maximize the development and use of domestic resources through the provision of information, analysis and advice on Canada's oil requirements and supply, from domestic and foreign resources.	- Preparing weekly analysis and reports on domestic, U.S. and international oil supply, demand and market developments. - Preparing periodic in-depth assessments of current and prospective developments regarding significant Canada and international oil market issues.

Figure 10: Petroleum (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
				- Developing and maintaining the domestic and international petroleum data bases. - Advising on policies and programs affecting the utilisation of domestic crude oil, oil imports and exports. - Advising on levels of export charges and prices and on applications for exemptions and reductions. - Administering the Petro-Canada/ Pemex crude oil import program. - Monitoring crude oil feedstock costs for the U.S. Gulf and Canadian oil-based petrochemical industry. - Preparing advice on the costs and benefits of a Canadian emergency oil inventory program. - Reviewing the need for an oil import strategy for Canada.
3. Petroleum Utilization	1,085	19	To develop policies and programs with respect to Canada's oil transportation, refining and marketing industry and monitor its activities so as to provide adequate utilisation of available petroleum resources.	- Ensuring efficient utilisation of available crude oil resources to supply Canadian oil products needs. - Developing information, analysis and policy advice to optimise the transportation, processing and marketing of oil in Canada. - Providing engineering evaluation of upgrading, refining and transportation projects. - Assessing feedstock requirements of refineries and the petro-chemical industry. - Monitoring the marketing products. - Developing a data base and methodology to monitor downstream industry profitability and to analyse the impacts of changing market environments and government policies.
4. Natural Gas and Liquids	147,229	41	To develop and implement policies and programs for greater use of natural gas and natural gas liquids in domestic and export markets, including pricing, taxation, transmission systems, distribution systems, and oil substitution programs.	- Advising on policies concerning the expansion and extension of gas transmission facilities. - Managing the Natural Gas Laterals Program (NGLP). - Managing the Gas Marketing Assistance Program (GMAP).

Figure 10: Petroleum (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
				- Administering the regulated pricing regime for natural gas sold in domestic markets. - Managing the Market Development Incentives Program (MDIP) from Alberta. - Managing the Distribution Systems Expansion Program (DSEP). - Implementing the Volume-Related Incentive Pricing program. - Assessing and advising on NEB recommendations to the Governor in Council concerning conformity of negotiated gas export contracts with gas export pricing policy. - Implementing the natural gas market incentive plan in co-operation with Alberta. - Assessing and advising on policies and programs relative to the domestic use and export of natural gas liquids. - Advising on required changes to the Canada/Alberta energy agreements with respect to natural gas. - Evaluating gas development projects and proposals for which federal assistance, incentives or regulatory changes are requested.
5. Oil Pricing and Compensation	300,584	33	To develop and administer programs which implement Canada's oil pricing system.	- Establishing appropriate rates of oil import compensation and processing claims for payment. - Determining New Oil Reference Prices (NORP)and making payments to producing provinces and synthetic oil producers. - Assessing the need for the transportation subsidy on shipments east of Montreal and processing applications. - Reviewing individual applications for financial support on crude oil exchanges and determining compensation. - Establishing the Petroleum Compensation Charge (PCC) and managing the collection of that charge. - Modifying programs in response to demands from the industry, provincial governments, consumers on changes in policy direction.

C. Emergency Planning (including the Energy Supplies Allocation Board)

Objective

To prepare, test and maintain contingency plans for the control and regulation of energy production, distribution and use in an emergency, including, specifically, programs for mandatory allocation and rationing of available petroleum supplies to ensure equitable distribution.

Resource Summary

This Activity accounts for approximately 0.1% of the total Program expenditures and approximately 2% of the total person-years. A more detailed breakdown of resources is given in Figure 11.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Allocation and Rationing Programs	669	8	692	8	515	8
National Emergency Agency for Energy	231	6	238	6	178	6
Organization Planning, Information Systems and Special Projects	439	7	454	7	338	7
Activity Management and Support	761	4	787	4	576	4
	2,100	25	2,171	25	1,607	25

Of the total expenditures, 57% is for personnel costs and 43% for operations and maintenance.

Description

The Emergency Planning Activity is responsible for preparation, maintenance and testing of contingency plans for programs of mandatory allocation and rationing pursuant to the Energy Supplies Emergency Act (1979), to ensure the equitable distribution of available petroleum supplies during a national emergency; development and maintenance of plans for the establishment and operation of a National Emergency Agency for Energy (NEAE) as required by the Emergency Planning Order (1981) to control and regulate energy production, distribution and use in the case of an emergency; Canadian representation on the North Atlantic Treaty Organization (NATO) and the International Energy Agency (IEA) that are responsible for contingency planning to deal with petroleum emergencies; and development of measures to mitigate the need for a national emergency

regulatory program. Upon declaration of a national emergency, the Activity initiates implementation and operation of a mandatory allocation program, and, if necessary, a rationing program, as required by the Energy Supplies Emergency Act (1979).

Performance Information/Resource Justification

Figure 12 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 12: Emergency Planning (including the Energy Supplies Allocation Board)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Allocation and Rationing Programs	469	8	To prepare, test and maintain contingency plans for programs of mandatory allocation and rationing of petroleum supplies, and upon declaration of a national emergency, to implement and operate these programs.	- Participating in Allocation Systems Test (AST-5) of the International Energy Agency (IEA). - Modifying and updating the rationing program. - Updating logistics information. - Representing Canada on the Standing Group on Emergency Questions of the IEA.
2. National Emergency Agency for Energy	231	6	To prepare, test and maintain plans for the establishment and operation of a National Emergency Agency for Energy (NEAE).	- Developing operating procedures for the emergency organization. - Testing NEAE plans. - Participating in NATO exercises. - Representing Canada on the NATO Petroleum Planning Committee.
3. Organization Planning, Information Systems and Special Projects	439	7	To support the planning and, if necessary, the implementation of allocation and rationing programs and the NEAE.	- Undertaking training of shadow staff for the NEAE emergency organization. - Recruiting and training staff for the NEAE emergency organization. - Developing computer systems to support participation in Allocation Systems Test No. 5 (AST-5) - Undertaking negotiations with the provinces on demand restraint measures and public information programs.

D. Conservation and Non-Petroleum

Objective

To encourage energy conservation, oil substitution and the development of adequate and secure sources of non-petroleum energy and alternative fuels to meet Canada's energy requirements and export opportunities.

Resource Summary

This Activity accounts for approximately 15% of the total Program expenditures and approximately 37% of the total person-years. A more detailed breakdown of resources is given in Figure 13.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Electrical Energy*	29,065	11	36,401	12	30,581	12
Uranium and Nuclear Energy	784	11	737	11	659	10
Coal	32,981	11	46,543	11	8,009	10

	385,579	523	575,719	474	351,207	443

* Includes $8,277,000 in loans to provinces to assist financing of regional electrical interconnections.

Of the total expenditures, 6% is for personnel costs, 16% for operations and maintenance, and the remaining 78% for contributions.

Description

The Conservation and Non-Petroleum Activity develops and delivers programs to encourage energy conservation, oil substitution and the use of non-petroleum and alternative fuels through: analysis of energy supply and demand; formulation of policy; dissemination of information; provision of advice; grants and contributions; and research and demonstration projects.

Performance Information/Resource Justification

Figure 14 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

In addition to the information noted below, a major evaluation study of the Canadian Home Insulation Program (CHIP) has been completed. CHIP, which is one of the principal components of the Home Energy Programs sub-activity, is the largest expenditure program in the Conservation and Non-Petroleum Activity. The results of the CHIP evaluation study are reported in Section I, Program Effectiveness. (See pages 3-21 to 3-23 inclusive).

Figure 14: Conservation and Non-Petroleum

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Electrical Energy	29,065	11	To evaluate and recommend policies to enhance the contribution of electricity in support of Canada's energy and economic needs; and to co-ordinate and administer agreements relating to electricity supply and use.	- Recommending federal roles in regional co-operation, and minimizing impact of inter-provincial disputes. - Analysing electricity market and forecasts of future needs, and encouraging appropriate investments. - Encouraging and supporting research, development and demonstration. - Improving opportunities for profitable international trade in electricity. - Administering federal-provincial agreements in support of policy objectives (e.g., Nelson River Transmission, Canadian Electrical Association R&D, Annapolis Tidal Demonstration).
2. Uranium and Nuclear Energy	784	11	To develop and co-ordinate policy on: uranium supply, exports of uranium and nuclear equipment; development of nuclear power and uranium industries in Canada; and management of radioactive wastes.	- Implementing Canada's uranium export policies. - Publishing information and data on uranium resource and nuclear energy. - Developing a nuclear supply industry rationalization and research strategy. - Co-ordinating federal approaches to major nuclear projects (e.g., Lepreau 2). - Negotiating with provinces and territories on radioactive wastes management (e.g., uranium tailings, low level radioactive waste, irradiated fuels, etc.)
3. Coal	32,981	11	To establish national strategies and an environment where coal can make an optimum contribution to the Canadian energy economy; and to identify, select and assist the commercialization of technologies leading to the expanded and environmentally acceptable use of coal.	- Implementing a coal supply and demand management information system. - Recommending coal strategies for the 1980s and 1990s, including the future of the Coal Utilization Program beyond 1985-86. - Completing demonstrations of coal/water fuel technology; environmental control technology;

Figure 14: Conservation and Non-Petroleum (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
				bubbling fluid bed combustion materials testings; and a plan for effective beneficiation of Atlantic coals. - Preparing a market implementation plan for utilization and transportation of coal-water fuels. - Constructing a circulating fluid bed combustion demonstration facility. - Administering the Coal Utilization Program and the Canada-Nova Scotia Agreement on Oil Substitution and Conservation.
4. Renewable Energy	66,721	83	To ensure the orderly development of renewable energy technologies, with the goal of increasing the use of renewable energy in the economy.	- Publishing a discussion paper on renewable energy. - Delivering and monitoring renewable energy programs (e.g., FIRE, EMERDEMO-Canada, Solar). - Administering the Canada-P.E.I. Agreement on Alternative Energy. - Co-ordinating and directing renewable energy R&D. - Analyzing the technical and economic potential of renewable energy technologies. - Providing a capability in the provinces and territories for marketing and delivering associated programs and for reporting upon regional developments affecting the sub-activity.
5. Transportation Energy	13,329	31	To ensure the orderly development of alternative non-petroleum liquid and gaseous fuels; and to improve the efficiency of energy use in the transportation sector.	- Publishing papers and convening public discussions of transportation energy options. - Achieving 150,000 gaseous-fuelled vehicles through the propane and natural gas vehicle programs, including 6,000 government vehicles by 1985-86. - Preparing a policy framework for promoting the use of alcohol fuels. - Designing and implementing new programs to ensure continuing reduction in new vehicle fuel consumption. - Preparing a policy and planning framework for the conservation of energy in the transportation sector. - Establishing a second ride-sharing centre in a major urban area. - Designing outreach programs to improve the efficiency of fuel use by trucks. - Providing a capability in the provinces and territories for marketing and delivering associated programs and for reporting upon regional developments affecting the sub-activity.
6. Home Energy Programs	174,697	84	To promote optimal energy management in the residential sector through conservation measures, oil substitution and advice to households.	- Promoting and encouraging good home energy planning and management. - Providing advice and information to the public on all aspects of residential energy conservation and substitution.

Figure 14: Conservation and Non-Petroleum (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
				- Stimulating 165,000 energy conservation activities in existing residential units through the Canadian Home Insulation Program (CHIP). - Effectively and efficiently administering CHIP, and Enersave. - Encouraging high-quality workmanship to produce enduring energy savings resulting from the energy conservation and oil substitution activities undertaken in existing Canadian residences. - Providing a capability in the provinces and territories for marketing and delivering associated programs and for reporting upon regional developments affecting the sub-activity.
7. Industry Energy Programs	45,245	86	To develop and manage policies and programs for the efficient use and conservation of energy, and for oil substitution in industry and commerce.	- Identifying conservation opportunities in industrial and commercial facilities, and providing contributions for consulting advice. - Developing an appropriate range of industrial and commercial sector energy conservation task forces by the end of 1986. - Funding eligible research and development projects to develop energy conserving products and processes. - Providing a capability in the provinces and territories for marketing and delivering associated programs and for reporting upon regional developments affecting the sub-activity.
8. Federal Energy Management Programs	1,433	15	To encourage and facilitate the efficient use of energy in all governmental operations by funding surveys and training courses and investing in cost effective retrofit (upgrading) projects.	- Investing $11.4 million in approximately 90 upgrading projects that will have pay-back (in terms of energy saved) of five years or less. - Investing $2.5 million to demonstrate innovative upgrading techniques for later use in the private sector and other federal organizations. - Funding 200 surveys ($1.5 million) to identify cost-effective opportunities to use energy more efficiently and thereby conserve energy. - Funding 40 training sessions for managers of federal buildings and 40 workshops for building operators ($0.4 million) so that opportunities identified in the surveys and demonstration projects can be exploited effectively.

Figure 14: Conservation and Non-Petroleum (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
			To accelerate the conversion of federal facilities off-oil to the most economical alternative fuel. The long-term program goal (1980-81 to 1991-92) is to reduce oil consumption in federal facilities by 40% (218 million litres).	- Investing $2.2 million in approximately 50 conversion projects, resulting in a displacement of 14 million litres of oil and thereby achieving, in five years, 75% of the program's eleven year goal of displacing 218 million litres. - Undertaking surveys of potential conversion to determine their feasibility and to identify the most cost effective way to proceed ($0.1 million). - Providing a capability in the provinces and territories for marketing and delivering associated programs and for reporting upon regional developments affecting the sub-activity.
9. Building Energy Technology	10,054	20	To work with the housing industry to ensure the construction of cost-effective super energy efficient housing by developing products and skills in the industry and developing consumer knowledge and demand for energy efficient housing.	- Developing and implementing revised training programs. - Modifying program technical criteria. - Ensuring development of testing and inspection capabilities in the industry. - Ensuring development of new national standards for products and equipment required in R-2000 housing (e.g., durability of polyethylene vapour barriers, air to air heat exchangers, etc.) - Supporting the construction of approximately 500 demonstration homes and 2,000 repeat homes under the Super Energy Efficient Home Program (SEEHP). - Implementing a public information program in co-operation with the building industry.
			To improve building energy technology by: - providing detailed technical advice and support to allow the successful implementation of EMR's conservation programs in a technically sound manner which will reduce potential risks and liabilities to EMR; and - supporting the development and transfer of priority technical information products, standards and advice to private sector user groups in response to their needs.	- Providing detailed technical advice, manuals, handbooks, etc., in support of EMR's conservation program for the residential sector. - Providing retrofit manuals, procedures, seminars, etc., for a number of specialized areas, including retail lighting, insulation of flat roofs, apartment building operations, domestic hot water systems in large buildings, boiler selection in operating guidelines, window retrofit and replacement handbook, restaurant seminars, domestic hot water distribution systems, etc. - Providing a capability in the provinces and territories for marketing and delivering associated programs and for reporting upon regional developments affecting the sub-activity.

E. Energy Research and Development

Objective

To ensure that Canada has the R&D policies, R&D programs and research capabilities to support national energy strategies.

Resource Summary

This Activity accounts for approximately 0.1% of the total Program expenditures and approximately 1% of the total person-years. A more detailed breakdown of resources is given in Figure 15.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Policy Development	85	1	85	1	91	1
Research and Development Projects	1,905	13	2,317	13	1,639	13
Information Systems	100	1	150	1	98	1
Activity Management Support	233	5	180	4	276	4
	2,323	20	2,732	19	2,104	19

Of the total expenditures, 46% is for personnel costs, 41% for operations and maintenance and the remaining 13% for contributions.

Description

The Energy Research and Development Activity gives general direction to the federal energy R&D programs which provide both technical knowledge and research facilities. Substantial progress has been made in broadening the scope of these R&D programs (defined by seven tasks: Energy Conservation; Oil Sands, Heavy Oils and Coal; Fusion Energy; Renewable Energy; New Liquid Fuels; Conventional Energy Systems; and Co-ordination) and ensuring their congruence with the long-term energy options open to Canada.

Performance Information/Resource Justification

The management and co-ordination of the interdepartmental energy R&D programs are done through an advisory network centred on the Office of Energy Research and Development (OERD). This Office is the Secretariat to the Interdepartmental Panel on Energy Research and Development. It is organizationally located in the R&T Sector of EMR. In 1985-86, OERD will be responsible for an Energy R&D budget amounting to almost $114 million.

The resources of this Activity are organized to achieve the following sub-objectives:

- To develop and recommend energy R&D policies and the strategies and resource allocations required to implement such policies.
- To develop and implement plans for R&D activities in response to the policies and strategies noted above, and to manage the expenditure of the panel and branch resources.
- To develop and provide information on energy R&D activities.
- To manage the administrative support of OERD.

F. Monitoring of Energy Enterprises

Objective

To monitor and analyze developments related to the petroleum industry, such as production costs, profitability, investments and industry structure, in order to provide relevant information to the governmental policy-making process, for private sector decision-making, and to inform the public.

Resource Summary

This Activity accounts for approximately 0.1% of the total Program expenditures and approximately 1% of the total person-years. A more detailed breakdown of resources is given in Figure 16.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Publication of Industry Monitoring Reports	1,107	16	1,345	16	878	16
Special Studies and Corporate Analyses of Financial and Ownership Information	49	-	79	-	7	-
Activity Management and Support	498	2	339	2	74	2
	1,654	18	1,763	18	959	18

Of the total expenditures, 50% is for personnel costs and 50% for operations and maintenance.

Description

The Monitoring of Energy Enterprises Activity collects information from companies reporting under the Energy Monitoring Act on petroleum reserves, production, revenues, cost and profitability, financing and reinvestment, foreign transactions, R&D, procurement policies, ownership and control. It analyzes the above data and prepares public reports. Selective auditing of individual company records is done to clarify the information provided and to ensure appropriate reporting. The Activity monitors foreign ownership trends in the energy industry and provides advice and data required for the application of various Canadianization programs. It also conducts reviews of the activities of larger companies in the petroleum industry, as required for policy formulation purposes.

Performance Information/Resource Justification

Plans of the Petroleum Monitoring Agency (PMA) for 1985-86 are focused on producing publications which more effectively and economically meet the needs of private and public users. These plans are based on users' interviews carried out in 1984-85.

Figure 17: Monitoring of Energy Enterprises

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Collection and collation of questionnaires	250	250	240
Preparation of regular monitoring reports	2	2	2

G. Petroleum Ownership, Control and Incentives

Objective

To actively contribute to increased Canadian ownership and control of the petroleum industry and the overall energy security of Canada by administration of the Canadian Ownership and Control Determination Act and the Petroleum Incentives Program Act.

Resource Summary

This Activity accounts for approximately 64% of the total Program expenditures and approximately 27% of the total person-years. A more detailed breakdown of resources is given in Figure 18.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
COCD Policy	1,380	23	2,132	31	1,624	29
COCD Operations	6,491	93	5,302	86	4,007	85
PIP Policy	2,122	36	2,340	36	1,425	27
PIP Operations	8,656	145	9,628	166	5,741	126
Activity Management and Support	1,606,620	88	1,705,077	66	1,735,069	75
	1,625,269	385	1,724,479	385	1,747,866	342

Of the total expenditures, 1% is for personnel costs, 1% for operations and maintenance and the remaining 98% for contributions.

Description

The Petroleum Ownership Control and Incentives Activity includes the development and maintenance of policies, systems, procedures and regulations to administer the Canadian Ownership and Control Determination (COCD) Act and to safeguard information received under the Act. Applications are processed for Canadian Ownership Rate (COR) and Control Status (CS) certificates. The Activity also includes the development and maintenance of policies, systems procedures and regulations related to eligible costs, and the safeguarding of information under the Petroleum Incentives Program (PIP) Act. Entity (corporations, partnerships, trusts, individuals, etc.) applications for incentive contributions are analyzed and processed, payments are issued, and applications payment and financial forecast records are maintained. Finally, rulings, interpretations and advice to potential applicants for COR and Canadian CS certification and PIP payments are also provided.

The Petroleum Incentives Administration (PIA) is responsible and accountable for the administration of the COCD and PIP Legislation. It is a service-oriented organization, applying legal, financial, economic and managerial skills to assess applicants' submissions and resolve unusual or difficult cases. The services provided by PIA are addressed to both the oil and gas industry, primarily situated in Alberta and to the financial community.

Implicit in the service aspect of the Administration is the ability to assist clients through offices in geographic proximity to their bases of operations. This has been achieved by the PIA through the establishment of a regional office in Calgary, Alta., and by regular industry contacts in Calgary and Toronto.

Performance Information/Resource Justification

Figure 19 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 19: Petroleum Ownership, Control and Incentives

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. COCD Policy	1,380	23	Based on the interpretation of the Canadian Ownership and Control (COCD) Act: to provide support and assistance to COCD Operations in processing applications for certification by assessing special cases, providing written opinions on complex cases, establishing precedents for future guidance and recommending action on requests for the exercise of ministerial discretion; to provide service to the oil and gas industry and investment community by issuing advance rulings and written opinions and publishing information circulars, interpretation bulletins and guidelines; to develop and maintain legislation, regulations and policy by reviewing and recommending amendments.	- Processing approximately five to 10 special cases and five to 20 advance rulings. - Issuing five to 10 precedents. - Issuing 15 to 20 interpretation bulletins and information circulars. - Issuing a COCD program kit to current and potential applicants.
2. COCD Operations	6,491	93	To process applications for certificates in Ottawa and Calgary under the COCD Act in accordance with the legislation and regulations and the internal standards established: to ensure the COCD Act and Regulations are interpreted and applied consistently in assessing applications; to provide service to applicants by responding to inquiries and by providing guidance in meeting program requirements; and to conduct audits to verify the integrity of the self-assessing system and compliance with legislation and regulations.	- Processing approximately 3,334 large and complex applications.

Figure 19: Petroleum Ownership, Control and Incentives (cont'd)

Sub-Activity	Resources $000's	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
3. PIP Policy	2,112	36	Based on the interpretation of the Petroleum Incentives Program (PIP) Act: to provide support and assistance to the industry and PIP Operations in processing applications for PIP incentives by providing opinions on complex cases, establishing precedents for future guidance, issuing advance rulings, providing prior approval of wells over $50 million and recommending action on requests for the exercise of ministerial discretion; to provide liaison and service to the industry and PIP Operations by researching legislative changes and preparing interpretations, issuing interpretative responses, guidelines, bulletins, circulars, releases and opinions; and to monitor the effects of policy, legislation and regulations and recommend amendments.	- Processing approximately 35 advance rulings and 100 ministerial discretion cases. - Issuing 70 interpretation bulletins and information circulars. - Processing 35 requests for wells exceeding $50 million.
4. PIP Operations	8,656	145	To process applications for payments in Ottawa and Calgary under the PIP Act in accordance with the legislation and regulations and the internal standards established: to ensure the PIP Act and Regulations are interpreted and applied consistently in assessing applications; to provide service to applicants by responding to inquiries and by providing guidance in meeting program requirements; and to conduct audits to verify the integrity of the self-assessing system and compliance with legislation and regulations.	- Processing approximately 30,300 applications from approximately 1,700 entities. - Pre- and post-auditing approximately 30 applicants and 10 special projects.

H. Administration of Canada Oil and Gas Lands

Objective

To ensure the vigorous and responsible development of oil and gas resources on Canada Lands.

Resource Summary

The resources for this Activity are shown in both the Estimates of EMR and INAC. For this Department's share, the Activity accounts for approximately 2% of the total Program expenditures and approximately 9% of the total person-years. A more detailed breakdown of resources is given in Figure 20.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Less: costs financed through INAC	9,463	123	9,365	121	5,849	92
Net Program resources (EMR)	59,477	127	10,182	125	6,123	98

Of the gross expenditures, 10% is for personnel costs and 6% for operations and maintenance and the remaining 84% for contributions.

Description

The Canada Oil and Gas Lands Administration (COGLA) is a shared responsibility of both the DM (EMR) and the DM (INAC). With respect to specific regulatory responsibilities, COGLA reports to the DM (EMR) on activities south of the line of administrative convenience and to the DM (INAC) on activities north of the line. (Figure 22 provides a map of the Canada Lands and line of administrative convenience.) Beyond the specific regulatory responsibilities, there are policy issues of common interest to both parent Departments. These are dealt with through the Policy Review Committee, which is composed of senior members from both Departments.

COGLA carries out four principal groups of sub-activities. The first group relates to the negotiation, issuance and processing of oil and gas rights on Canada Lands and the negotiation and issuance of production licences. With respect to the exploration phase, the sub-activities include the issuance of calls for proposals to explore new lands and the subsequent negotiation of new Exploration Agreements (EAs). The EAs include a work plan and a Canada Benefits plan which outline how Canadian industry and labour will be given full and fair access to the benefits from oil and gas activities, and the opportunity for Canadian firms to supply goods and services related to these activities.

The second group relates to the regulation and monitoring of the operational, occupational and environmental safety of oil and gas initiatives. This includes writing regulations and standards, evaluating applications to carry out geophysical, drilling or research programs, imposing terms and conditions on operations, monitoring activities, preventing unsafe operations, entering and inspecting sites, and ensuring proper reporting. It also involves a series of approvals including a development plan approval, a production facility approval, a production structures approval, and, depending on the particular circumstances of the development, a launch approval, an installation approval, a transport approval, and a final certificate of fitness and production operations approval.

A third group of sub-activities covers inter- and intra-governmental co-ordination. In its role as principal contact with the oil and gas industry, COGLA depends on the support and co-operation of many federal departments. COGLA also administers joint federal-provincial agreements and/or arrangements for offshore oil and gas, and provides the framework for federal and provincial officials to work together.

The fourth group can be termed support sub-activities and includes the resources evaluation function, the provision of data to companies, institutions and individuals and environmental and related engineering research functions. Resource evaluation provides an appraisal of oil and gas potential on Canada Lands necessary for assessing exploration, for determining work programs for exploration agreements, and for federal oil

and gas supply forecasting. The geophysical and geological data that COGLA gathers for its own purposes are also made available to companies for operational applications and to the scientific community for research. Research and development projects directly support the regulatory decision-making process described above in group two. The main research vehicle is the Environmental Studies Revolving Funds (ESRF).

Performance Information/Resource Justification

In acc· ·dance with the Memorandum of Understanding between EMR and INAC, the f ·nding of COGLA is the joint responsibility of both Departments, subject to normal governmental controls, and this funding arrangement is reflected in the Estimates of both Departments.

Figure 21 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 21: Administration of Canada Oil and Gas Lands

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Policy	692	12	To review, develop and implement policies and strategies for the Canada Oil and Gas Resources management regime. To determine lands for issuance and negotiate and issue Exploration Agreements. To develop a resource management regime for non-fuel ocean minerals. To provide public information on federal oil and gas resource management on Canada Lands.	· Developing a new "Lands Policy." · Letting three to five Calls for Proposals and negotiating 10 to 15 Exploration Agreements. · Preparing a policy paper on offshore non-fuel minerals regime and initiating consultation with coastal provinces on an offshore non-fuel mineral regime. · Issuing approximately 125 press releases and holding about 10 major press conferences.
2. Coordination	50,866	18	To promote federal-provincial-territorial cooperative arrangements for resource management. To implement, administer and monitor joint inter-governmental cooperative resource management agreements. To maintain good working relationships with key agencies in jurisdictions where agreements do not exist. To establish and administer consulting arrangements to coordinate inter-departmental interests in resource management decisions. To ensure industry receives consistent direction in meeting regulatory requirements.	· Negotiating one or possibly two federal-provincial agreements for joint offshore oil and gas resource management. · Completing implementation of one federal-provincial agreement and implementing a second agreement. · Reviewing consultative arrangements with CCG, CEIC, DFO, DOE, ORIF and Labour and strengthen as necessary. · Strengthening COGLA coordination function in the Territories.
3. Safety	9,187	57	To provide state of the art engineering and environmental regulations, standards and guidelines for operational and occupational safety. To review and approve proposed equipment, facilities, and work practices for drilling, seismic, research and production programs.	· Issuing new Structures and Production Facilities Regulations and Drilling Safety and Training guidelines. · Certifying five drilling units and 10-15 supply boats. · Evaluating 25-35 drilling programs and issuing 60 Authorities to Drill a Well.

Figure 21: Administration of Canada Oil and Gas Lands (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
			To monitor daily drilling, production, seismic and research activities and associated environmental conditions. To inspect oil and gas facilities and operations. To maintain an effective, comprehensive emergency regime.	- Carrying out 400-500 inspections of drilling units. - Monitoring 30 daily drilling reports and 100 seismic surveys. - Monitoring daily storm/sea state conditions for 20-25 drilling units. - Completing review of three development plans. - Reviewing 12 emergency contingency plans from safety viewpoint.
4. Environmental Protection	1,731	15	To define and set environmental terms and conditions, for all exploration and production rights proposals. To provide state of the art environmental and engineering regulations, standards and guidelines for environmental protection. To review and approve proposed equipment, facilities and work practices for drilling, seismic research and production programs. To maintain an effective, comprehensive emergency measures regime. To ensure adequate public review of environmental impact of major oil and gas activities.	- Developing guidelines for calls for proposals, environmental monitoring and well site abandonment. - Participating in panel review of West Coast moratorium. - Providing environmental input for Structures and Production Facilities Regulations and Drilling guidelines. - Assessing 25-35 drilling programs and 40 Proposals for an Authority to Drill a Well. - Reviewing and approving 12 contingency plans and conducting two major emergency exercises. - Reviewing environmental impact statement for Hibernia.
5. Resource Evaluation and Conservation	2,597	35	To evaluate oil and gas potential on Canada Lands. To recommend exploration strategies to expand knowledge of reserves. To develop and maintain data bases for tracking potential and reserves on Canada Lands. To assess and approve reservoir extraction plans.	- Contributing Canada Lands portion of National Hydrocarbon Inventory. - Providing regional assessment for four areas. - Reviewing and analysing 14 significant discoveries. - Processing data, cores and cuttings for 40 wells and reservoir logs for 40 wells. - Reviewing 30 to 35 reservoir test programs for individual wells. - Reviewing extraction plan for one major field.
6. Rights and Revenues Administration	1,558	26	To promulgate royalty and rights regulations pursuant to the Canada Oil and Gas Act. To manage the renegotiation of Exploration Agreements (EAs) and the relinquishment of lands. To administer EAs in force including the registration and transfer of interests and the monitoring of work commitments. To ensure the full and prompt collection of revenues.	- Administering 160-180 EAs, renegotiating 17 EAs and implementing relinquishment procedures for 72 EAs. - Collecting $10 million in revenue. - Establishing the registry of interests. - Developing royalty regulations

Figure 21: Administration of Canada Oil and Gas Lands (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
7. Canada Benefits	1,039	17	To assess appropriateness of oil industry activities in ensuring Canadians have full and fair access to Canada Lands opportunities. To foster co-operation between Canadian suppliers and oil industry to expand capabilities of Candian firms to provide goods and services. To encourage expanded capabilities of Canadian operators to participate on Canada Lands. To ensure adequate public review of socio-economic and industrial impact of major oil and gas activities.	- Assessing 50-70 Canada Benefits packages and assessing 20-30 Annual Canada Benefits Reports. - Monitoring employment practices of 10-12 operators. - Reviewing 600-700 designated items. - Determining specific supplier development strategy and special affirmative action strategy. - Reviewing Hibernia Development Plan Proposal and socio-economic impact statement.
8. Research and Development	2,006	18	To ensure the Environmental Studies Revolving Fund (ESRF) provides the data and research base necessary for oil and gas activity approvals. To ensure the marine engineering R&D program supports regulatory needs and/or promotes Canadian technological development. To promote, with operators and the supply community, the development of Canadian oil and gas technologies and joint initiatives to transfer and share technology from other countries. To maintain the Canada Lands data bases and mineral samples required by the oil and gas industry and its supporting services firms.	- Publishing 15-25 ESRF reports. - Reviewing ESRF program achievements. - Completing three to four marine engineering studies on structural monitoring, diving and safety. - Identifying R&D opportunities under Canada Benefits plans and Venture and Hibernia development plans. - Filling 2,500 requests for data or advice.
9. International	173	3	To provide expert technical advice and testimony on international seabed resource management regimes and boundary issues. To promote international offshore comprehensive emergency planning for cross-boundary accidents. To provide information and data on Canada Lands activity and the Canadian land management regime to foreign companies, academics and agencies.	- Advising on offshore boundary disputes involving St. Pierre et Miquelon, Beaufort Sea, Dixon Entrance and Juan de Fuca Strait. - Holding or participating in one bilateral offshore emergency exercise. - Filling 100 information requests from outside Canada.

Figure 22: The Canada Lands

Line of Administrative Convenience Boundary between EMR and INAC ....

INAC has a broad mandate north of 60^0, and EMR has a mandate for area south of 60^0 and the offshore areas at the east and west coasts of Canada.

I. Program Management and Support

Objective

To provide managerial direction to the Energy Program and to maintain common central services.

Resource Summary

This Activity accounts for approximately 0.1% of the total Program expenditures and approximately 3.0% of the total person-years. A more detailed breakdown of resources is given in Figure 23.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Management	630	2	849	10	388	6
Financial Management	752	18	733	18	786	22
Human Resources Management	714	19	739	20	673	18
	2,096	39	2,321	48	1,847	46

Of the net expenditures, 68% is for personnel costs, 8% for operations and maintenance and the remaining 24% for grants and contributions.

Description

The Program Management and Support Activity provides central management and direction of the other Activities of the Energy Program. Also included, are resources for certain centralized support organizations such as finance and personnel. A more detailed description of the finance and human resources organizations can be found in the Administration Program on pages 2-14 and 2-18 respectively.

Performance Information/Resource Justification

The performance information for the finance and human resources organizations is described in detail in the relevant sections of the Finance and Administration and Human Resources Management Activities in the Administration Program. This information is detailed on pages 2-16 and 2-19 of the Administration Program.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The Forecast and Actual columns on the various schedules of this Section have been revised to reflect the transfer to the Administration Program of the resources associated with the public information activities which were previously included in the Energy Program.

Figure 24 does not include resources for the Environmental Studies Revolving Funds (ESRF). Details on ESRF are discussed on pages 3-65 and 3-66.

Figure 24: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	55,023	51,294	42,780
Contributions to employee benefit plans	7,703	6,668	7,223
Other personnel costs	73	77	135
Personnel sub-totals	62,799	58,039	50,138
Goods and Services			
Transportation and communications	8,712	9,584	6,015
Information	3,789	1,903	2,052
Research and development contracts	8,967	5,411	10,462
Other professional and special services	55,821	61,579	35,331
Rentals	1,638	1,497	966
Purchased repair and upkeep	209	407	93
Utilities, materials and supplies	1,376	2,294	1,047
All other expenditures	88	78	104
Goods and services sub-totals	80,600	82,753	56,070
Operating totals	143,399	140,792	106,208

Administration of Canada Oil and Gas Lands	127	125	98
Program Management and Support*	39	48	46
	1,405	1,363	1,249

* The corporate finance and personnel organizations supporting the Energy Program are included in this Activity. The resources are shown in Figure 2, pages 3-14 and 3-15.

The net increase of person-years in the 1985-86 requirements from the 1984-85 forecast is made up of the following items.

- Phased reduction of the Canada Oil Substitution Program and the Canadian Home Insulation Program (28)
- Termination of the Maritimes Engineering Program (1)
- Canada/National Energy Audit Program 14
- Energy Demonstration Program (ENERDEMO) 21
- Super Energy Efficient Housing Program 32
- Industrial Energy Research and Development Program 4

Total: 42

Figure 26: Authorized Person-Years and Salary Provision

Category and Group	Authorized Person-Years 85-86	84-85	83-84	Current Salary Range	1985-86 Average Salary Provision

Secretarial, Stenographic, Typing	159	190	140	12,636-31,946	21,760

Note: The Person-Years columns display the forecast distribution of the authorized person-years for the Program by occupational group. The Current Salary Range column shows the salary ranges by occupational group at October 31, 1984. The Average Salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

In support of the development of improved batteries for electric vehicles	—	100	84
In support of government-industry activities for development of new liquid fuels	120	100	47
*In support of the development of natural gas fuelling stations	2,150	3,140	366
*In support of conversion or purchase of natural gas vehicles	5,000	5,930	286
In support of development of specifications and standards for alternative transportation fuels	50	100	—
Canadian Home Insulation Program: Contributions to individuals	109,500	188,500	53,145
In support of low cost energy conservation initiatives	486	496	420
In support of assisting industrial and commercial establishments and institutions to improve efficiency of energy use	6,000	4,000	3,658
In support of organizations to stimulate the use of biomass residue as a fuel in place of conventional fuels and to cogenerate electricity and heat	20,000	10,000	7,069
In support of the Atlantic Provinces to assist industrial and commercial establishments and institutions to finance a portion of the capital investments in energy conservation	17,446	14,200	2,060
*In support of industrial conversion assistance program	5,200	6,750	771
In support of super energy efficient housing demonstrations	4,000	--	1,727
In support of a transportation energy conservation task force	50	--	50
In support of the development and demonstration of new technologies related to renewable and non-conventional sources of energy and energy conservation and oil substitution by conventional fuels	16,348	--	--
In support of biomass combustion systems in Prince Edward Island	2,000	--	--
In support of industrial energy research and development programs to effect research and to increase the efficiency of the use of energy	3,722	--	--
Items not required for 1985-86			
In support of a utility off-oil fund to finance up to 75% of the cost of environmentally acceptable conversions of oil-fired electricity plants to coal	--	366	87
In support of commercial-scale demonstration of advanced electrolytic hydrogen production	--	700	--

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions (cont'd)			
In support of federal-provincial agreements for the development and demonstration of new technologies related to renewable and non-conventional sources of energy and energy conservation	--	17,100	15,036
In support of stimulating the wider application of conservation and renewable energy opportunities in Prince Edward Island	--	2,000	617
To provincial agencies and to persons for development initiatives undertaken under the General Development Agreements and Subsidiary Agreements, for the purpose of economic and socio-economic adjustment	--	3,012	2,653
In support of the direct delivery of a conservation and renewable energy program in Quebec		4,000	66
Summer Canada - Student Employment Program	--	--	10
Energy Research and Development			
Class contributions to the International Energy Agency or its agents for energy research and development projects relevant to Canadian concerns	300	--	--
Petroleum Ownership, Control and Incentives			
Petroleum Incentives Payments	1,600,000	1,700,000	1,729,034
Items not required for 1985-86			
To the Swedish Council for Building Research	--	35	31
To KFA Jülich for the exchange of information relating to energy modelling, energy systems analysis and energy technology assessment	--	10	6
To the International Energy Agency for an Energy Technology Policy Study	--	--	36
Administration of Canada Oil and Gas Lands			
In support of infrastructural costs directly or indirectly relating to the exploration for or development, production or transportation of oil and gas in the offshore area	50,000	--	--
Program Management and Support			
In support of organizations associated with research, development, management and promotion of energy-related issues	459	421	94
Items not required for 1985-86			
Memorial University	--	--	2
Environmental Studies			
(S) Under Section 49(9) of the Canada Oil and Gas Act for such environmental or social studies as the Minister determines are necessary	2,500	4,362	819
*Funding from the province of Alberta under the Market Development Incentives Program (MDIP)	(92,900)	(26,300)	(33,754)
Totals of contributions	2,300,216	3,653,252	2,618,383
Totals of grants and contributions	2,300,391	3,653,407	2,618,548

* In accordance with the agreement on Oil Pricing between the Governments of Canada and the Province of Alberta dated September 1, 1981, funding is received from Alberta for the Market Development Incentives Program (MDIP) for purposes intended to increase natural gas markets in Canada. The amount shown represents the estimated amount of MDIP funds to be applied to eligible programs during the fiscal year.

4. Non-Budgetary (Loans)

Figure 28: Details of Non-Budgetary Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Loans			
Regional electrical interconnections	**8,277,000**	9,458,000	7,709,186

B. Cost Analysis

Figure 29 shows the total cost of each Activity in the Energy Program. Other costs shown consist of the charges for accommodation provided by Public Works Canada ($5,086,000), surgical-medical insurance ($944,000), and other miscellaneous services provided free by other governmental departments ($167,000). Costs shown do not include depreciation or accommodation provided by this Department without charge.

Figure 29: Program Costs ($000)

Activity	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Total 1984-85
Energy Policy	8,585	596	9,181	-	**9,181**	8,974
Petroleum	374,031	587	374,618	-	**374,618**	623,881

Conservation and Non-Petroleum	374,679	2,307	376,986	98,573	**278,413**	469,378
Energy Research and Development	2,323	88	2,411	-	**2,411**	2,815
Monitoring of Energy Enterprises	1,654	79	1,733	-	**1,733**	1,841
Petroleum Ownership, Control and Incentives	1,625,269	1,698	1,626,967	-	**1,626,967**	1,626,162
Administration of Canada Oil and Gas Lands	59,477	560	60,037	7,857	**52,180**	8,836
Program Management and Support	2,096	172	2,268	-	**2,268**	5,312
	2,450,214	6,197	2,456,411	106,430	**2,349,981**	2,749,479

C. Other Acts and Instruments Administered in Whole or in Part by the Energy Program

1. Major Energy Program Legislation

Atomic Energy Control Act
Canada-Nova Scotia Oil and Gas Agreement Act
Canada Oil and Gas Act
Canadian Home Insulation Program Act
Canadian Ownership and Control Determination Act
Cooperative Energy Act
Energy Administration Act (formerly part of the Petroleum Administration Act)
Energy Monitoring Act
Energy Supplies Emergency Act, 1979
Motor Vehicle Fuel Consumption Standards Act
National Energy Board Act
Northern Pipeline Act
Oil and Gas Production and Conservation Act
Oil Substitution and Conservation Act
Petro-Canada Act
Petroleum Incentives Program Act

2. Instruments and Agreements

Canada-Alberta Agreement Relating to Energy Pricing and Taxation
Canada-Alberta Agreement Respecting Gas Pricing and Market Development Incentive Payments
Canada-British Columbia Agreement on Energy and Taxation
Canada-Nova Scotia Agreement on Offshore Oil and Gas Resource Management and Revenue Sharing
Canada-Saskatchewan Agreement Relating to Pricing and Taxation
Emergency Planning Order

3. Others

Arctic Waters Pollution Prevention Act
Canada Business Corporation Act
Canada-Saskatchewan Heavy Oil Development Agreement
Crow's Nest Pass Rate Agreement
Public Lands Grants Act
Territorial Lands Act

D. Revenue Summary

The revenues received by the Energy Program are deposited to the Consolidated Revenue Fund and are not available to finance activity expenditures.

Figure 30: Revenue by Type ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Privileges, licences and permits	7,857	7,602	6,185
Interest on Loans	97,923	97,147	66,966
Miscellaneous	650	97,811	85,332
Total Program	106,430	202,560	158,483

The descriptions of the principal expected sources of revenue for 1985-86 are as follows:

Privileges, Licences and Permits

• Royalties and exploratory licences for Canada Lands	7,857

Interest on Loans

• Hydro Quebec	1,253
• Manitoba Hydro	24,383
• Prince Edward Island	850
• Nova Scotia Power	319
• New Brunswick Electric Power Commission	600
• Atomic Energy Loans	70,518
Sub-total:	97,923

Miscellaneous

• Interests on funds advanced to Canada Mortgage and Housing Corporation for payment of CHIP claims	650
Sub-total:	650
Total:	106,430

E. Petroleum Compensation

Petroleum Compensation payments are authorized by Section 77(1) of the Energy Administration Act (S.C. 1980-81-82-83, c. 114) which was proclaimed in July 1982. (See Figure 31, page 3-64).

Objective

To provide compensation for the importation of foreign petroleum through payments to refiners and other importers of crude oil and petroleum products and for the subsidization of designated classes of high-cost domestic petroleum through the payment of compensation either directly or through the provincial goverments to producers of such petroleum. The compensation payments are financed by a levy (the Petroleum Compensation Charge) collected on all domestic and foreign petroleum used in Canada.

Description

Payment of Compensation: Under Part IV, Division I of the Energy Administration Act, compensation is payable in accordance with the Regulations for prescribed quantities and kinds of petroleum. The Petroleum Compensation Program Regulations describe in detail the following classes of petroleum as compensatory.

- **Synthetic Petroleum:** This is produced from the mining of the Athabasca Tar Sands by the partners in Syncrude Canada Ltd. and by Suncor Inc.

- **New Oil:** This includes defined post-1980 "new" petroleum produced in the provinces of Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, and defined "new" pentanes-plus produced in the provinces of Alberta, British Columbia and Saskatchewan.

- **Special Old Oil:** This includes post-1973, pre-1981 "new" oil defined by the provinces as eligible for new royalties in the provinces of Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, and similarly defined pentanes-plus produced in the provinces of Alberta, British Columbia and Saskatchewan.

- **Oil Imports:** These include foreign petroleum discharged at a point of entry in Canada or at a place outside Canada for direct transmission by pipeline to Canada.

- **Domestic Transfers:** When domestic crude oil shipments are made east of Montreal, compensation is available based on the transportation costs to east coast refineries.

- **Crude Oil Exchanges:** For foreign crude received in exchange for domestic crude exports, financial assistance is available, if required.

Collection of Levy: Under Part III.1 of the Energy Administration Act, a levy is imposed on (1) domestic petroleum received for processing or consumption in Canada, and (2) foreign petroleum or petroleum products imported into Canada for processing, consumption, sale or other use in Canada at a rate prescribed by the Governor in Council.

F. Market Development Incentives Program

In accordance with the agreement on Oil Pricing between the Governments of Canada and the province of Alberta dated November 1981, funding is received from the province of Alberta for the Market Development Incentives Program (MDIP) for purposes intended to increase natural gas markets in Canada. The amount shown represents the estimated amount of MDIP funds to be applied to eligible programs during the noted fiscal years.

Figure 32: Market Development Incentives Program ($000)

	1984-85	1985-86	1986-87
Petroleum Sources (for the Distribution System Expansion Program)	-	55,000	55,000
Non-Petroleum Sources (for the Compressed Natural Gas Fuelling Station Program)	-	5,900	5,500
Conservation (for the Industrial Conversion Assistance Program)	-	5,000	5,000
Marketing Assistance Program	26,300	27,000	17,000
Totals	26,300	92,900	82,500

G. Environmental Studies Revolving Funds

Objective

To fund environmental and social studies which are necessary to determine whether to authorize oil and gas exploration or development activities on Canada Lands.

Authority

Canada Oil and Gas Act (S.C. 1980-81-82-83, c.81).

Description

The Environmental Studies Revolving Funds (ESRF) are administered within the federal government for studies in environmental and social areas necessary for decision-making directly relevant to oil and gas activities on Canada Lands. ESRF are financed through special levies on all those who own oil and gas interests on Canada Lands.

The funds come under the jurisdiction of both EMR and INAC. The former addresses issues associated with offshore activities in southern Canada and is administered by COGLA on behalf of EMR. The latter is concerned with onshore and offshore activities in Canada's North and is handled through the Northern Affairs Program of INAC.

ESRF operate on the basis of annual budgets, levies and study priorities agreed to by the Ministers of EMR and INAC. Such studies must be national or regional in scope, be supplementary or complementary to ongoing federal government programs, and directly address the needs of the oil and gas sector and its regulators.

Studies might cover the following areas:

- The physical and chemical effects of equipment and methods employed in oil and gas activities.
- The interaction of oil and gas activities with living organisms on the land, in the sea, and in the air.
- The socio-economic effects of oil and gas activities.
- The monitoring of long-term biological effects caused by oil and gas activities.

H. Energy Security Programs

Distribution System Expansion Program (DSEP)

The objective of the DSEP is to assist the extension of natural gas distribution systems to areas where gas service is presently not available. DSEP addresses the federal energy programs' objective of reducing the use of oil in residential, commercial and industrial sectors in each province to no more than 10% by 1990.

This is a multi-year contribution program. It is used to directly fund system expansions which are not otherwise financially viable for a utility to undertake by itself but which will yield social and economic benefits from a national perspective. Without DSEP, many areas would not have natural gas service. With this service available, consumers can take advantage of such conversion assistance initiatives as the COSP, and the Industrial Conversion Assistance Program (ICAP).

Expenditures in 1985-86 will be almost $60 million. This money will fund major extension projects and smaller projects in British Columbia, Manitoba, Ontario, Quebec and Saskatchewan.

Super Energy-Efficient Housing Demonstration Program (SEEHD)

Three hundred super energy-efficient housing units have been built with federal funds by the Canadian housebuilding industry. Energy consumption for space heating will be about 25% of that in conventional homes. There is strong industry support, and the technology being developed is positively affecting Canadian housing construction practices.

Natural Gas for Vehicles Assistance Program (NGVAP)

In February 1983, the federal government announced two natural gas contribution programs in the transportation field. The Natural Gas Fuelling Station Contribution Program (NGFSCP) is designed to encourage the development of a vehicle refuelling station network for natural gas. It provides a taxable contribution of up to $50,000 to be extended to some 125 fuelling station operators by March 1987. The Natural Gas Vehicle Program (NGVP) is established to encourage the use of natural gas in vehicles by offsetting the costs of vehicle conversions. It offers taxable contributions to both commercial users and private consumers of up to $500 toward the estimated $1,800 cost of converting a vehicle for natural gas use. A target of 35,000 vehicles powered by compressed natural gas by March 1987 has been set for this program. Approximately $7.2 million will be required for these purposes.

Forest Industry Renewable Energy (FIRE) Program

The FIRE program provides capital assistance in support of energy production from biomass. To date, 126 projects, with a total federal contribution of $58 million, have been approved. When completed, these

projects will have an energy capacity of 1.1 Mm^3 of oil equivalent per annum. Over one-half of the displaced fuel is oil, one-third natural gas and the rest liquified petroleum gas (LPG), electricity and coal. In 1985-86, a further $20 million will be required to meet program demands.

Solar Demonstration Program

The objective of the program is to have cost-effective applications of active solar energy in Canada by 1988. The total approved budget is $45 million, through to March 1988, plus $30 million for R&D. To date, demonstrations include about 1,500 solar domestic hot water systems, 92 commercial/industrial projects and six special projects.

ENERDEMO-Canada

This is a national, federally-delivered program which includes and replaces previously separate programs: ENERDEMO-Quebec, Remote Community Demonstration Program (RCDP) and the expired federal-provincial Conservation and Renewable Energy Demonstration Agreements (CREDA). The program demonstrates energy conservation, oil substitution and alternative energy to enhance market acceptance. This program was approved in 1984 for a five-year period. In 1985-86, $16.3 million will be spent for ENERDEMO net of RCDP below.

Remote Community Demonstration Program (RCDP)

This program is a distinct component of the ENERDEMO program. It provides financial support to remote communities to identify and adopt alternative-to-oil energy supply and energy conservation opportunities in order to reduce the use of and dependence on high cost oil products. To date, 84 studies have been funded. In 1985-86 $2.4 million will be spent on demonstrations and information transfer.

Canadian Home Insulation Program (CHIP)

To September 1984, this program had provided more than two million Canadian households with contributions of up to $500. Approximately 80% of Canadian residences are eligible for these contributions, which cover up to 60% of the costs for insulating materials and labour. Expenditures to September 1984 totalled more than $774 million. As noted previously (see p. 3-23), in the light of new energy policy directions, it has been decided to reduce the rate of the CHIP grants to 33 1/3% commencing January 1985, and to terminate the program effective March 31, 1986. An additional $109.5 million will be required for 1985-86. This program was evaluated under Report No. PE 50/1983, November 1983.

Industrial and Commercial Energy Conservation Programs

These programs are intended to encourage greater efficiency and lower costs in the use of energy by industry, commerce and agriculture, which account for 36% of national energy use.

The Voluntary Industrial Energy Conservation Task Forces represent the core of these programs. Currently, approximately 750 companies, using 80% of industrial energy within their manufacturing facilities, are involved through a network of 16 industry task forces which promote energy conservation through studies of conservation opportunities workshops, seminars and newsletters.

Energy Conservation Task Forces have also been formed in non-manufacturing sectors, including the hospitality industry, office buildings, agriculture, post-secondary education, and, most recently, distribution trades.

Other governmental support measures include: the Canada Energy Audit Program (CEAP), formerly the National Energy Audit Program (NEAP), which assists industrial and commercial establishments in identifying areas of energy waste and in planning and implementing corrective measures; the Atlantic Energy Conservation Investment Program (AECIP) which provides contributions to industrial and commercial establishments and private institutions to finance a portion of their energy efficiency projects; Class 34-Tax Incentive which provides a fast write-off (three years) for a range of energy conservation and renewable energy equipment; and the Industrial Conversion Assistance Program (ICAP) which provides contributions to encourage conversions to substitute pipeline natural gas for heavy fuel oil No. 6. In 1985-86, $28.6 million will be spent for these purposes.

The 1982 report of the Canadian Industry Program for Energy Conservation (CIPEC) indicated an overall improvement in energy efficiency (intensity of energy use) of 15.4%. This has been achieved during the period 1972-82, mainly by means of low capital cost measures. Industry previously exceeded its 1980 goal of 12% and remains committed to its goal of 23% for 1985.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested to spend $317,257,800 for the operation of the Minerals and Earth Sciences Program (MESP) during the 1985-86 fiscal year. Of this amount, $271,046,200 is required for operating expenditures, including grants and contributions, and $46,211,600 is for capital expenditures. An estimated $17,122,100 for employee benefits will be met under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The highlights of the Minerals and Earth Sciences Program (MESP) for 1985-86 are described below. Details are discussed in the Background and Planning Perspective portions of this Section, and in the Analysis by Activity Section, starting on page 4-25.

- In collaboration with the United States Bureau of Mines and the Ontario Ministry of Labour, to demonstrate diesel exhaust toxicity reduction devices in underground mines ($668,000 and 4.5 P-Y).

- To demonstrate improved coal preparation plant effluent treatment and fine coal cleaning through the use of mobile coal preparation pilot plants ($3,030,000 and 0.5 P-Y).

- To participate with Alberta Oil Sands Technology and Research Authority (AOSTRA) and the industry in the establishment of an Oil Sands Extraction Demonstration Centre in the vicinity of Fort McMurray, Alta. ($3,895,000 and 3 P-Y).

- To continue comprehensive pilot plant studies in support of the Petro-Canada's 800 cubic metres per day (m^3/d) commercialization demonstration of the Canada Centre for Mineral and Energy Technology (CANMET) hydrocracking process ($700,000 and 17 P-Y).

- To contribute to mining and mineral processing technologies under federal-provincial agreements.

- To receive and process the first Canadian high resolution data from France's remote sensing satellite (SPOT) ($500,000).

- To continue the geoscience investigations of the Canadian Arctic and off the east and west coasts under the recently implemented Frontier Energy Geoscience Program.

- To complete sea-bottom surveys concerned with offshore bilateral boundaries in the Juan de Fuca Ridge, St. Pierre et Miquelon and Beaufort Sea areas.

- In co-operation with the United States Geodetic Survey agency, to complete the readjustment of the continental framework by employing a redefined horizontal datum for North America.

- The Canadian Lithoprobe Project, an association of university and government researchers, expects to complete (Phase I) the acquisition and/or processing of geological and geophysical data from Vancouver Island transect and the Kapuskasing structure in the Canadian Shield.

- To establish a Canadian scientific station on an ice island in the Arctic Ocean.

- To complete the consultations launched by the Minister in fiscal year (FY) 1984-85 on the appropriate role of the federal government in the minerals and metals sector of the Canadian economy.

- To organize and undertake governmental/industrial missions to the People's Republic of China (nonferrous metals, products, and technology), to the Far East (asbestos, and environmentally sound asbestos products), to Eastern Europe (iron ore), and to several other countries to assess the market potential for Canada's lead and zinc products.

- To negotiate federal-provincial mineral development agreements with British Columbia, Ontario, Prince Edward Island and Quebec.

- To facilitate the formation of an industry financed and operated by international Tungsten Institute.

- To complete the establishment of pilot projects relating to the National Mines Accident Data Bank with possibly three provinces.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For details see page
Mineral Industry Development	13,862	12,123	1,739	4-25
Administration of the Canada Explosives Act	2,115	2,014	101	4-29

Program Management and Support	9,069	9,780	(711)	4-55
Totals	334,380	298,875	35,505	—
Authorized person-years	3,208	3,215	(7)	4-59

The resources shown in the Forecast column have been revised to reflect the transfer to the Administration Program of the costs of the public information activities which were previously included in the Minerals and Earth Sciences Program. In addition, the 1984-85 forecast reflects the consolidation of the Minerals Technology and Energy Technology Activities into a new Mineral and Energy Technology Activity.

Explanation of 1985-86 Changes: The 1985-86 estimated expenditures of $334.4 million represent an increase of approximately $35.5 million (or 12%) over the 1984-85 forecast. This change is made up of the following increases and decreases.

	($ millions)
• For all activities' general inflation increases related to personnel costs only	6.5
• Decreased funding for research and development (R&D) activities	(4.4)
• Mineral development agreements	5.6
• Frontier Geoscience Program	4.7
• Sherbrooke Institute of Cartography	1.1
• Contribution to the European Space Agency	9.2

• Increase in capital to modernize preparation of maps and charts	2.4
• Increased funding to develop Canadian radar satellite (RADARSAT)	5.2
• Development of Canadian ground system	7.8
